sprang up everywhere like mushrooms; and all available means of transport were requisitioned for the carriage of men, beasts and goods to the ports and to the seats of manufacture. Indian labour was consequently faced with a more than capacity demand for its services. Local Governments were besieged by employers with requests for relaxations of existing restrictions in hours and conditions in factories. The ranks of the factory inspectorate were thinned as a result of some inspectors having joined the fighting forces and the duties of factory inspection were entrusted to officers already overburdened with other work. All the good preparatory work which had been done during the two years following the coming into effect of the 1911 Act appeared to be going by the board—but only temporarily, because Indian labour was no longer that dumb and inarticulate part of factory plants which it used to be during the years preceding the outbreak of the war. If workers were asked to work for longer hours they demanded and secured higher rates of wages. They were also not blind to the fact that employers were making better profits than before. Prices of all commodities were, moreover, rising and Indian operatives, like others, began to feel that they were not able to make both ends meet on prevalent rates. There were, therefore, frequent demands for increases in wage rates—demands which were not always granted without strikes; but the few strikes which occurred were mostly of an unorganised character and were short-lived because employers rather than allow production to suffer by prolonged stoppages of work reached compromises with their workmen by doling out small increases in wage rates at frequent intervals. Apprehensive, however, of their workpeople demanding a continuation of the higher rates after the war had ended, many employers all over India and particularly in the textile industry in the Bombay Presidency resorted to the device of granting wage increases in the form of war or dearness allowances over the basic rates of 1914—a practice which cotton millowners in the cities of Bombay, Ahmedabad and Sholapur and in several other centres are adhering to even to-day. In extenuation of their action in this matter employers referred to the sliding scale allowances dependent on cost of living indexes which were introduced in munition and other factories and establishments in Great Britain and many Western countries towards the end of the war.

One of the most vexed questions in Indian industry is that of wages and Indian employers will not grant increases in rates unless they are forced to do so. Wages in 1916-17 were undoubtedly higher than what they were in 1914, but at the same time, real wages (earnings expressed in terms of sufficiency in relation to the cost of living) were in many centres and cases lower than in the pre-war year; and consequently, industrial workers were very little better off than they were before the war. At the same time, however, the foundations for a better standard of life were being laid. Excessive hours of work, however, still continued to be the feature in all branches of industry and conditions inside the factories had worsened. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which

forced several local Governments to pass legislation to control them. Temporary *bustees* (collections of improvised huts and shelters) sprang up everywhere and these were a standing menace to the maintenance of the good health of town and city populations. Many of the new factories which had been erected during the war to meet the demand for munitions and army clothing were just mere shelters with roofs and sides built of corrugated metal. Conditions in such factories during the summer and the wet seasons were extremely oppressive. Little attempt had been made to study the questions of proper ventilation in the older factories or of the manner in which the ill effects of excessive humidification in weaving sheds could be mitigated. Employers still continued to think in terms of dividends and it would not be incorrect to say that greater care was taken of the machinery than of the human element in front of it. Gaps in muster rolls caused by the serious illness or death of numbers of operatives could always be filled without expense; or at the worst, at the cost of a few rupees paid to a jobber or a recruiting agent; but, replacements of uncared for and neglected machinery would considerably reduce available profits and agency commissions.

Agency commissions are a peculiar feature of Indian industry. Unlike the West where large industrial enterprises are controlled by managing directors who receive fixed salaries, many company *flotations* in India are directed by what are known as agency firms. Oftener than not the persons comprising these firms have little or no experience in the various branches of the technique of manufacture and they receive their remuneration generally on the basis of a percentage on quantities manufactured irrespective of sales or profits. Most agencies are hereditary and go down from father to son, again irrespective of the fact whether the sons have the necessary qualifications or not to conduct the huge enterprises entrusted to their care. Agency firms are naturally interested mainly in the speeding up of production and they have no time for anything except calculations of their profits both from percentages on production and commissions on purchases of plant and raw material. This should not, however, be taken as indicating that there were no humanitarian employers in India. Most of the larger engineering workshops were controlled by Englishmen and foreigners many of whom had had actual experience of work in foreign factories before they became industrial entrepreneurs in India; and, in many of these concerns, hours of work were reasonable and the welfare of the labour employed was given a fair measure of studious consideration. Indian employers were also not lacking in pioneer work in the field of industrial welfare and the late Sir Currimbhoy Ebrahim, the late Mr. Nowrojee Wadia, the late Mr. Morarjee Goelias and the late Mr. Bomonjee Petit did much to provide decent housing and proper medical facilities for the workers employed in the many large cotton mills which they controlled in the cities of Bombay and Sholapur. But taking all industries as a whole, very little was done for the welfare of labour and humanitarian employers were like the proverbial needles in a haystack.

THE AFTERMATH OF THE WAR.

The victorious and successful emergence of Great Britain, her dominions and her allies from the World War of 1914-1918 led the people of the British Empire, and particularly of India, to believe that the dawn of an utopia had at last arrived. Everybody expected that prices would fall, that there would be an ample scope of employment for all and that the end of the war would see the beginning of a long stretch of continuous prosperity for industry, trade and commerce. All these hopes were, however, destined to be blasted sooner than the worst pessimists could have foreseen. The end of the war saw an unprecedented epidemic in the form of influenza sweep over the face of practically the whole world. The ravages wrought by this new 'plague' were probably the worst in India and it was responsible for a total death roll of over eight million persons. Contrary to the expectations of the masses and also of many who should have known better, prices instead of falling rose more sharply than ever before—due, in a large measure, to the unprecedented depreciation in the currencies of most European countries. Merchants and manufacturers all over the world had made phenomenal profits during the period of the war—thirteen large jute mills in Bengal alone paid dividends of 200 per cent. and over for the year 1918—and with the gradual closing down of munitions works and factories engaged in the manufacture of war materials, these merchants and manufacturers were looking for new fields for investment. Property valuations increased five-fold and more. The huge reconstruction loans raised by the victorious nations were subscribed several times over within a few hours of the lists being opened. Prices of industrial securities rocketed and there were still large amounts of liquid funds available for further investment. Industrialists therefore got together and floated big companies for transport services by rail, road, sea and air, for the construction of new mills and factories and for the exploitation of mineral resources. The most tempting prospectuses were issued and both the gullibles and the wiseacres hastened in a mad rush to get allotments in the portions of the share capital which were available for subscription by the public. The prices of the shares of several of these new companies doubled or trebled even before the share certificates had been issued. Hectic building activity was evident everywhere and this was naturally followed by heavy demands for all types and kinds of labour.

Similar to the chance which Indian industrialists had secured at the outbreak of the war was the one which Indian labour secured at the end of it. The great influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily and a situation very similar to that which followed the great plague of the nineties was created; but on this occasion there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwithstanding this, fancy rates of wages were demanded and were, in many cases, paid. Wages

in the more organised industries, however, lagged behind the rapid rise in prices and real wages began to become awfully low. The beginning of the year 1919 therefore saw the outbreak of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, the power of the strike as an economic weapon for securing redress of grievances had not been generally recognised by Indian labour. "The workers, who were for the most part villagers endeavouring to improve their position by a temporary allegiance to industry, were submissive and unorganised; and if conditions became too distasteful, the natural remedy was not the strike but the abandonment of the mill or of industry generally." As has already been pointed out above, a number of industries were making phenomenal profits and the employers could, by concerted action on the part of labour, have been forced to pay phenomenal wages; but strikes on any organised scale up to then were rare and the employers, as has already been pointed out, were not giving anything away unless they were absolutely forced to do so. Prices, however, were still rising and it was literally becoming almost impossible for the workers to meet even their most necessary expenditure on the existing rates of wages. Had employers then exercised greater vision and been a little more farsighted than what they were in the matter of granting adequate increases in wages themselves without being forced to do so, the history of the labour movement in India during the last eighteen years, so far at least as industrial disputes are concerned, might have been entirely different. Employers, however, were deaf to the approaching roar of thunder and they had to pay the eventual penalty for their short-sightedness in this matter.

The war had done much to educate Indian labour in the conditions of work prevalent and the methods of agitation adopted in other countries. Conditions, particularly as regards working hours, which had formerly been accepted as inevitable, were no longer regarded as tolerable; and while trade unions, as they are understood in the West, were still almost unknown, the value of concerted action was being rapidly realised. A number of strike committees were formed and many large strikes of a fairly concerted character met with almost instantaneous success in several industrial centres in India. The idea of organisation for the purpose of securing concessions received a substantial measure of recognition everywhere and it was not long before some of the earlier strike committees formed themselves into trade unions similar to those which had been formed in the previous century in most European countries. These earlier unions were formed with two main objects in view: (1) increases in wages; and (2) reductions in hours of work. The first was an imperative economic necessity. The second had received considerable support from the Indian Industrial Commission which had been set up by the Government of India in 1916 to examine and report upon the possibilities of further industrial development in India and to make recommendations with particular reference to new openings and to assistance by Government. In their report which was published in 1918,

the Commission noted a growing opinion in India in favour of a ten hours day and they recommended that the possibility of reducing the existing statutory maximum hours should receive further examination. There was a recurrence of the influenza epidemic of 1918-19 in the winter of 1919-1920 and although it was not of such severity as the earlier one it was nevertheless severe enough to be responsible for a total mortality in India of considerably over a million. The acute shortage which had been created in the supply of available labour by the earlier epidemic was accentuated by the later one. This gave added strength to the labour organisations that were coming into being as the result of the successes which had been gained by the earlier strike committees in the matter of wage increases and reductions in hours.

The allied problems of excessive hours and the shortage of labour, were, however, to be temporarily solved by factors the operation of which nobody had foreseen. The gradual demobilisation of the armies of the war and the closing up of the various munitions works had disbanded tens of thousands of both men and women who in anticipation of re-employment in the great industrial enterprises which were being floated everywhere had spent the savings which they had secured during the war. Pre-war industries in the belligerent countries could not, moreover, be re-organised at once. It was suddenly realised that resources would have to be husbanded and there was a perceptible decline in the purchase of commodities and the demand for manufactured goods. Production had necessarily to be eased off for stocks were accumulating. The spectre of unemployment loomed large. But, employers had learnt their lesson *re*, the difficulty of securing workmen during periods of acute shortage of labour and they were not prepared to disband large bodies of their work-people. They were, therefore, not unwilling to consider reductions in hours of work. Some employers who had already reduced hours found that production far from having fallen off had actually improved. A new angle of vision came into being and the trail was laid for reforms of a world wide and far reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be "of special and urgent importance" but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as practicable, the observance

of these principles. The duties of this organisation which was to be controlled by a Governing Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically. Each subject was to be discussed at first at one and later at two sessions. After a first preliminary discussion, the view of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a final discussion and decision. It was laid down that it would be obligatory on all Member States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

THE WASHINGTON CONFERENCE.

In accordance with a provision in the Treaty of Versailles, the first International Labour Conference met at Washington on the 29th October 1919 and sat for a month. India, as an original member of the League of Nations, was among the 39 countries represented. The Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray representing Indian employers and Mr. N. M. Joshi representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight hours day, unemployment, the night work of women and young persons, the employment of children, maternity benefits and industrial diseases. "The Conference met in an atmosphere of optimism which later experience has shown to be unjustified and this, and the inadequate time allowed for the examination of the immense agenda made it difficult for it to examine critically the various proposals in detail. It is not surprising therefore that, while the deliberations of the Conference had a wide influence, and none of their decisions failed to produce its effect in legislation, difficulties which became apparent later have so far prevented many countries from translating into law the conclusions embodied in the more important Conventions adopted." The Washington Conference adopted the Hours Convention, but as far as India was concerned, her delegates were able to impress the Conference that the adoption of an 8-hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60-hour week in factories subject to the Indian Factories Act.

The ground for a reduction in factory hour had, however, already been partially prepared by the Government of India who, acting on

the recommendations made in the matter by the Industrial Commission, had circularised all local Governments in June 1919 on the subject. After referring to the possibility that shorter hours might mean greater production, the Government of India, in their circular letter, said that they believed that there was a considerable body of opinion among the more enlightened factory owners that the hours of labour might well be reduced without injurious effects on the output of the Indian Mills. The replies showed a general consensus of opinion in favour of a ten-hour day or a sixty-hour week. The subsequent endorsement of a sixty-hour week for India by the Washington Conference received further support from the workmen themselves in the winter of 1919-20 which saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of work. Concerted strikes in the cotton Mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten-hour day in addition to the granting of higher wages. In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a ten-hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured.

CREATION OF GOVERNMENT LABOUR DEPARTMENTS.

In this short historical sketch of the growth of the labour problem in India references have frequently been made to the circularisation to local Governments by the Government of India of the proposals in connection with factory legislation and also to the independent action taken by the Government of Bombay in appointing Committees of Enquiry to examine certain phases connected with the conditions of work in factories in the Bombay Presidency. But apart from these and the examination of certain questions connected with labour by the Factories Commission of 1907 and the Industries Commission of 1916, there was little co-ordination between the Centre and the Provinces in matters connected with labour, and there were no provincial or all-India enquiries of a general character into industrial wages or conditions of employment in industrial establishments. It is true that certain provinces had conducted quinquennial enquiries into agricultural wages but the results of these enquiries were of a very meagre and limited character. The participation of India in International Conferences and the increasing interest taken by the Indian public in questions connected with labour made it necessary both

for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2, Rule 26) framed under the Government of India Act, 1919, industrial matters included under the heads "factories" and "welfare of labour" fell within the scope of the provincial legislatures, and the heads "regulation of mines" and "inter-provincial migration" were central subjects. The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of labour officers in the same year. The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the Government of Bombay who created a Labour Office in 1921. Further details in connection with this office and other matters dealing with Government administration of labour subjects will be found in a special section towards the end of this note.

THE FACTORIES ACT OF 1922.

A Bill to amend the Factories Act of 1911 was introduced by the Government of India in the Legislative Assembly in March 1921 and was passed into law in January 1922. The Amended Act was brought into effect from 1st July 1922. The main provisions of the new law as it now stood were as follows:—

1. The definition of the term 'factory' was improved so as to bring within its scope all concerns using power and employing not less than 20 persons. At the same time, local Governments were invested with powers to declare as factories any concerns which were engaged in a manufacturing process and which employed less than 10 persons whether power was used or not. The exemption hitherto enjoyed by indigo, coffee and tea factories was removed; and the clause contained in the 1911 Act permitting an abrogation of the restrictions relating to hours of work, holidays, etc., in respect of persons working in a place within the precincts of a factory where no power was used or where power was used for the purpose of moving or working any appliance in connection with the bringing or taking of any goods into or out of the factory was omitted.

2. Effect was given to the Washington Convention re minimum age of children employed in factories by raising the lower limit of the age of a child from 9 to 12 and by raising the upper limit from 14 to 15. The restriction of

children's hours in textile factories to six per day which was imposed by the 1911 Act was made universally applicable to all factories. The provisions relating to the certificates of age of children were improved by prescribing that only those children who were within the specified age limits and who were fit for employment should receive certificates and that the certificates granted to children who were subsequently found to be unfit could be revoked. No child was to be worked for more than four hours without a rest interval of at least half an hour; and no child could be employed in two factories on the same day. For employing a child in two factories on the same day a parent or a guardian could be fined to the extent of Rs. 20.

3. Both the 1891 and the 1911 Acts restricted women's hours to eleven per day but both Acts permitted relaxations in respect of prohibition of night work and the limitation of daily hours of women employed in cotton gins and presses. The 1922 Act restricted women's hours to eleven per day and to sixty per week and totally prohibited their employment at night between the hours of 7 p.m. and 5-30 a.m. except in seasonal factories in the fish curing and canning industries.

4. The 1911 Act had restricted men's hours to twelve per day in textile factories alone. The 1922 Act restricted men's hours in all factories to eleven per day and to sixty per week. The further restrictions imposed by the earlier Act on the working of textile factories were removed.

5. All operatives were to be given a compulsory weekly holiday subject to the limitation that no worker would be made to work for more than ten consecutive days without a holiday. Provision was also made for the grant of a compulsory rest interval of one hour to all adult workers after every period of six hours' work or, at the request of the employees concerned, of two half-hour periods after five hours' work. In factories working for 8½ or less hours a grant of an interval of half an hour was permissible subject to the consent of the operatives and the sanction of Government.

6. Exemptions on defined principles were to be permitted in respect of the restrictions re, the weekly holiday, rest intervals and daily and weekly limitation of hours of work of adult males employed in continuous process factories or in occupations connected with power and maintenance plants or in the case of *force majeure*.

7. Provision was made for controlling excessive artificial humidification when injurious to the health of the operatives. (In this connection the Government of India appointed Mr. T. Maloney, a textile expert from Lancashire to make an enquiry into and to make recommendations on the use of artificial humidification in cotton mills in India. Mr. Maloney's report was published early in 1922 and most of his recommendations were adopted by all textile mills without further legislation on the subject.

at the time.) Various other provisions dealing with the health and safety of the operatives were also incorporated in the new Act.

8. The rule making powers of local Governments were extended to meet the additional requirements of the new legislation; and the Governor General was in addition, empowered to make rules for the adequate disinfection of wool used in factories in order to prevent infection from anthrax.

9. The limit of maximum fine for single offences against the Act was raised from Rs. 200 to Rs. 500; and a new principle was introduced by providing that a court imposing a fine in respect of an offence causing bodily injury or death could pay the whole or part of the fine recovered as compensation to the injured or in the case of a workman's death to his legal representatives.

Subsequent amending Acts were passed in 1923, 1926 and 1931 but the changes affected by these were designed rather to meet administrative difficulties which had been experienced in the working of the main Act or for making improvements of a minor character and not for altering any of the main principles laid down in 1922. Factory staffs were adequately expanded in all provinces by recruiting as Inspectors men who had the necessary technical experience and district and other officers who had hitherto been entrusted with considerable factory inspectorial duties were completely divested of them although all district collectors were appointed ex-officio Inspectors of Factories. This was done in order to provide for an early inspection of a factory in the absence of a proper Inspector if a report was received of an alleged breach of the Act.

PROPOSALS FOR FURTHER LABOUR LAWS.

Indian labour was jubilant at the successes which it had gained as a result of the passing of the Factories Amendment Act of 1922. Further legislative proposals in connection with the grant of workmen's compensation in the case of accidents, for the regulation of working conditions in mines and for the registration of trade unions were under the consideration of the Government of India who were consulting local Governments on the proposals which they had formulated. Proposals to safeguard employers against strikes which were, as has been seen, becoming most disturbing to industry were also under consideration and the Government of Bombay, acting on the recommendations of the Provincial Legislative Council, appointed an Industrial Disputes Committee in 1922 under the chairmanship of Sir Stanley Reed, editor-in-chief of *The Times of India* "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes". In their report, the Committee, after setting down their views on various schemes of welfare which employers might adopt to improve the conditions of employment and

of the life of their workpeople so as to make them more contented and less amenable to the influence of outside agitators, recommended that a statutory tribunal on the lines of the Industrial Court created by the United Kingdom Act of 1919 should be set up in the Bombay Presidency; and that all strikes which could not be settled without Government intervention should be referred to this Court. The Government of Bombay, acting on the recommendations of this Committee, drew up a Bill on the subject which was introduced in the local Legislative Council in 1923-24. In the meanwhile, however, the Government of India informed the Government of Bombay that they themselves were proceeding with similar legislation of an all India character and they requested the local Government to abandon their own measure. The Workmen's Compensation and the Mines Acts were passed in 1923 and the Trade Unions Act was passed in 1926 but the all India Trade Disputes Act was not passed till 1929. The main features of these several pieces of labour legislation will be described in the special sections dealing with these subjects.

THE TURNING OF THE TIDE.

Unfortunately for Indian labour, a period of acute depression set in in all industries towards the end of the year 1922. Some of the first tasks to which the Labour Office created by the Government of Bombay in 1921 had set itself was to compile a cost of living index for working classes in Bombay City, to make an enquiry into their standard of life by the collection of family budgets for representative working class families and to make an enquiry into wages and hours of work in the cotton mill industry in the Bombay Presidency. The cost of living index compiled by that office—the first of its kind in India—showed that except for a slight fall during the earlier months of the year 1920, prices had been steadily rising after the end of the war for the next two years. The peak was reached in October 1920. The annual average of the monthly index numbers (1914=100) for that year was 183. A gradual decline, however, set in from the beginning of the following year and the annual average for the year 1921 registered a fall of ten points on the figure for 1920. A further fall of nine points was registered in the annual average for the year 1922. The year 1923 opened with a sharp decline to 156; but for the next five years—that is, up to the end of the year 1927, the optimum monthly variation was within eleven points between 150 and 161. The Report of the Family Budget Enquiry conducted by the Bombay Labour Office showed the standards of earnings and expenditure of some two thousand representative working class families and single men during the years 1921 and 1922 but no comparable figures were available for any other year. The report of the cotton mills' wages enquiry which was published early in 1923 showed that the real wages of cotton mill workers in Ahmedabad were thirty-three per cent. higher in 1921 than in 1914. Later investigations conducted by the Bombay Labour Office have shown that the figures, especially those for 1914 on which this deduction of real wages had been based were very defective but

this was not known at the time that the report was published; and the Ahmedabad Millowners' Association made the first organised post-war move in India for wholesale reductions in wages by announcing that the wages of all workmen in the Ahmedabad cotton mills would be reduced by 20 per cent. with effect from the 1st April 1923. The strike of the Ahmedabad cotton mill workers which followed this announcement was by far the largest and the most disastrous that has ever occurred in that city. It affected 56 out of 61 working mills, involved nearly 45,000 workpeople and resulted in a total time loss of nearly two and a half million man-days. It began on the 1st April and lasted till the 4th June. On that date a compromise was arrived at by the terms of which wages were to be reduced by 15½ per cent. instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

There can be no doubt that as compared with the standards of wage rates and prices which were prevalent during the peak period of 1920, real wages continuously improved with the steady decline in the level of prices which first set in in the month of November of that year. The point, however, is whether the wage rates of 1914 and 1920 were sufficient to maintain a decent standard of life. Studying the question from such fragments of statistical information as are available, the answer must be definitely in the negative. Contemporary observers of those periods give harrowing descriptions of insufficiently clad, half-starved and unkempt men, women and children rising from street pavements in the cities in the early hours of the morning and dragging their bodies to their factories and places of employment to earn pittance of an average of six to eight annas (six to eight pence) a day for work lasting for anything between twelve to fifteen or more hours per day; and although this description could not apply to all industrial workers in India, it did apply to fairly large proportions of them, and the remainder were not very much better off. Judging the standards of life of Indian workers in 1914 from the standards which labour in all the industrialised countries of the world are endeavouring to maintain to-day, they must be considered as appallingly low and one can well sympathise with Indian labour for attempting to clothe and feed itself and to live as human beings ought to be able to do.

In an earlier paragraph it was stated that in granting increases in wages during the period of high prices between 1917 and 1920 cotton mill owners had resorted to the device of giving the increases in the form of percentage additions to war or dearness allowances over the basic rates of 1914 or of some other year between 1914 and 1917. In the case of the cotton mills in Bombay City these allowances had amounted to 80 per cent. over basic rates for weavers and to 70 per cent. for spinners and women. In 1918-1919 when cotton mills were making phenomenal profits, the Bombay Millowners' Association met demands for a participation in these profits by sanctioning an annual bonus of one month's pay for all cotton mill workers in

Bombay City provided a full year's service had been put in during the year for which the bonus was paid. Proportionate bonuses were to be paid to those who had served for lesser periods. This bonus was paid annually for five years between 1919 and 1923; but as the beginning of the year 1924, the Association decided that the profits made during the previous year would not justify the payment of the annual bonus. This bonus had come to be regarded by the workers as a definite part of their wage contract and when it was not paid in the middle of January with the wages for December as it usually was, the workers of all textile mills in Bombay City went out on strike. The Government of Bombay appointed a Committee under the chairmanship of Sir Norman Macleod, Chief Justice of the High Court of Judicature of Bombay, as a fact-finding body "to consider the nature and basis of the bonus which had been granted to the employees in the cotton mills of Bombay since 1919 and to declare whether the employees had established any enforceable claim, customary, legal or equitable" to the payment of such a bonus. The Committee were also requested to enquire into the profits made by the Bombay mills between 1919 and 1923 and to report on the contention of the millowners that the profits of 1923 did not justify the payment of the annual bonus. The report of the Committee was entirely in favour of the employers and the strike was broken immediately after its publication but not before the industry had lost nearly eight million working days. This strike was greater in proportion than any previous strike which had occurred in the country. It would be interesting to observe that as far as the question of the equity of the bonus was concerned, the Committee held that "the millworkers had not established any enforceable claim, customary, legal or equitable to the payment annually of a bonus, by which we mean that in our opinion such a claim would not be upheld in a court of law."

ABOLITION OF THE EXCISE DUTY ON COTTON MANUFACTURES.

The next big concerted attack by employers on wage rates in India was made in 1925 by the millowners in Bombay City. The cost of living index remained more or less stationary but the cotton mill industry was passing through a period of severe and unprecedented depression and the Millowners' Association, Bombay, decided to reduce the dearness allowances by 20 per cent. with effect from the 1st September 1925. This decision, if it had been accepted by the workers would have meant an all round average cut of about 12 per cent. in their earnings. They were not likely to take it lying down but as is usual with strikes in India, no warning was given of the threatened strike. On the 15th September 1925, 33,249 workers from 15 mills suddenly downed tools and by the 6th of October there was a complete stoppage of work in all the textile mills in the city and island of Bombay. The Government of Bombay held several conferences with the representatives of both sides and several proposals and counter-proposals were considered but neither of the parties appeared likely to give in. On this

occasion, however, the Government of India came to the rescue of both the cotton mill industry and the labour employed in it by suspending, for the remainder of the financial year, the collection of the excise duty of 3½ per cent. which had been levied on cotton manufactures in India for several years past. The Millowners' Association had given repeated assurances to both the Government of India and the local Government that the old rates of wages would be restored if the excise duty were abolished and the strike therefore virtually ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November. Each of the successive general strikes which occurred in the cotton mill industry in Western India between 1923 and 1928 was more severe in intensity than its predecessor and the strike of 1925 was no exception. It resulted in a loss of nearly eleven million working man-days to the industry and the workpeople lost considerably more than a crore and a quarter of rupees in wages. But, "the strike was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organisation, they were able to take concerted action and to offer a stubborn resistance against any attack on their wages." At the same time, however, it is significant that "the employers did not give way until they had secured from Government a concession for which they had pressed before arriving at the decision to effect a cut in wages."

It will have been noticed that so far prominence has been given only to the big industrial disputes that occurred in the textile industry in Western India. This should not be taken to mean that other industries and the other provinces in India were not troubled with industrial strife. As soon as Indian labour had realised the potential value of the strike as a weapon for securing redress of grievances, strikes began to get extremely frequent and the quinquennium 1921-1926 saw the outbreak of no less than 1,154 strikes in India involving nearly two million workpeople and causing a total loss of thirty-seven and a quarter million working days. Of these, 146 disputes involving 575,570 workpeople and resulting in a loss of nearly three and a half million working days occurred in the jute mills in Bengal. Strikes in the jute mills are not of such frequent occurrence or as severe in intensity as they are in the cotton mill industry; and the main reason for this appears to be that the jute industry is almost entirely under British management and under the control of men who take greater pains in understanding the labour which they employ. The number of disputes in the cotton mill industry in the whole of India during the same quinquennium was only three and a half times as great as that in the jute industry but the total loss in working days was nearly seven times as much and amounted to nearly twenty-five million man-days. Summary statistics for the main industries are incorporated in the following table:—

Consolidated Statement of Industrial Disputes for the Quinquennium 1921-25.

Industries.	Number of disputes.	Number of workers involved.	Man-days lost.
Cotton spinning and weaving	505	815,341	24,967,386
Jute	146	575,570	3,454,356
Engineering (excluding railway workshops) ..	65	71,590	1,031,779
Railways (including railway workshops) ..	59	135,254	3,687,504
Mines	29	30,632	261,198
Others	350	291,327	3,915,681
Total ..	1,154	1,919,714	37,317,904

It is significant that although only 59 of the total number of 1,154 strikes in the period under review occurred on Indian railways (including railway workshops) and that the total number of workpeople involved was less than a quarter of those involved in disputes in jute mills, the loss in man-days was quarter of a million days more. The group "others" in the above table includes ports, road transport services, municipalities, etc. This group also came in for its fair share of industrial strife with 350 strikes and a total loss of nearly four million man-days. It is not possible in this short note to analyse the causes and the results of these 1,154 disputes by industries. It may be interesting, however, to state that as far as causes are concerned, 641 strikes or 55 per cent. of the total number of disputes during the quinquennium arose over questions of pay and bonuses, 239 or 21 per cent. over matters connected with 'personnel' and 274 or 24 per cent. over other matters. If the results are similarly analysed, 200 strikes or 17 per cent. of the total ended entirely in favour of the workers and 762 or 67 per cent. in favour of the employers. In 179 or in 16 per cent. of the disputes, the workers were only partially successful. No statistics are available to show the extent to which trade unions in India played a direct or indirect part in conducting these disputes or in bringing about settlements but from the personal experience of the compiler of this note, he can say that this was, except in the case of some of the bigger strikes, very small indeed. Quite an appreciable number of the disputes under consideration arose over matters connected with 'personnel.' This head includes demands for the dismissal or reinstatement of particular individuals, generally jobbers in textile mills; and chargemen, mukadams and maistries in other industries. It is the 'personnel' strike which is the most injurious to industry as it occurs with extreme suddenness and without previous notice.

A PERIOD OF QUIESCENCE.

The two years 1926 and 1927 were, as compared with the quinquennium which has just been reviewed, a period of quiet consolidation of their respective positions for both the employers and the employed and also for Government who had completed a heavy programme of labour legislation. There was a slight revival in trade and employers after the bitter experience which they had had of disastrous strikes most dislocating to industry were content to allow sleeping dogs to lie as far as wages were concerned. Governments and employers had completed extensive industrial housing schemes, many employers had expanded their activities for the welfare of their workpeople and the cost of living index was steadily on the decline. The administration of the factory law had been improved by the 1922 Act and the avenues for evasions were so barricaded as to make breaches of the law most difficult if not impossible. Hours of work, as compared to those obtaining five years previously, were congenial and permitted of sufficient rest and also of some relaxation and recreation. Absences from work began to get more frequent. All these and other factors were conducing to a decided improvement in the standard of life and the conditions of employment of industrial

labour. The chief Indian industries were however, still showing adverse balances in their profit and loss accounts and the shareholders were getting little or no return on the capital which they had invested in industry. The shareholders were consequently becoming somewhat restive, and harangues at the annual general company meetings by the more disgruntled of them were becoming frequent enough to be noticed. The Indian Tariff Board (Cotton Textile Industry Enquiry) appointed in 1926 had also made a number of recommendations aiming at a more efficient conduct and management of cotton mills in India. The more progressive firms, thereupon, began to devise ways and means for improving efficiency and for securing greater production at less cost. The methods of rationalisation which had been successfully attempted in the West received a measure of studious consideration and three go-ahead firms of cotton mill agents in Bombay City—Messrs. E. D. Sassoon and Company, Messrs. James Finlay and Company, and Messrs. Killick Nixon and Company—decided to try out schemes whereby cotton mill workers would be asked to look after a greater number of spindles and more looms. A beginning was made at the Manchester Mill of which Messrs. E. D. Sassoon and Company were the agents. The attempt was at once met by a prolonged strike in that mill.

The annual averages for numbers of industrial disputes, workers involved and total time lost in the cotton mill industry in India for the five years 1921 to 1925 were: 101 strikes, 163,068 workers involved and 4,993,477 man-days lost. The corresponding averages for the two years 1926 and 1927 were: 58 strikes, 29,400 workers involved and 214,564 man-days lost—figures which speak for themselves. The advent of rationalisation in Indian industries synchronised with the entry of the principles of communism into the country and the formation of the Workers and Peasants Party on models similar to those obtaining in Bolshevik Russia. Many communists secured appointments on the executives of several trade unions in India and they were not long before they made their presence on these bodies felt by inducing workers to go on strike on the most flimsiest of pretexts. The immediate object of these communists was not so much to improve the condition of industrial workers as to cause prolonged stoppages of work in industry thereby sending batches of dissatisfied workmen back to their native villages to preach revolutionary doctrines of class hatred, the uprooting of capitalism and the smashing of stable Governments.

THE CLIMAX OF INDUSTRIAL STRIFE IN INDIA.

The year 1928 was one in which a handful of communist agitators in India secured a large measure of control over her industries through their almost complete domination over labour. They engineered large scale strikes in most industries and brought several to the verge of an almost complete standstill. It is significant, however, that the workers in the mining industry and in the cotton mills in Ahmedabad were free of their evil machinations. The Indian Mines Act of 1923 had not given miners the same hours as factory workers and had permitted a twelve-

hour day; and most miners live close to the mines in which they are employed. This together with the fact that few mines are situated close to easily accessible towns left the miners free of communist control. Cotton mill workers in Ahmedabad are in a peculiarly happy position owing to the excellent conciliation and arbitration machinery which exists in that centre for the settlement of industrial disputes. One of the earliest trade unions in India was that of the cotton mill workers of Ahmedabad. Very fortunately both for the industry and for the labour employed in it this union has been under the control and influence of Mr. M. K. Gandhi and Mr. S. G. Banker, and under the management of two extremely able, far-sighted and level-headed men in the persons of Messrs. Gulzarilal Nanda and Kanubhai K. Desai. With commendable farsightedness the Ahmedabad mill-owners had agreed to the formation of a permanent arbitration board consisting of Mr. M. K. Gandhi as the representative of labour and the Chairman of the Millowners' Association as the representative of the employers. All disputes which could not be settled by conciliation between the union and the management of the Mill or mills concerned or by negotiation between the union and the Ahmedabad Millowners' Association were to be referred to the permanent arbitration board for settlement. In the event of the arbitration board failing to reach an agreed solution, the constitution laid down that the matter should be referred by the board to an agreed *sarpanch* or umpire whose decision would be final and which both parties to a dispute would be bound to accept. Although there have been many strikes in the Ahmedabad cotton mills during the last fifteen years—mainly over questions of personnel and rates—the Ahmedabad cotton mill industry, except for the big dispute which occurred in 1923 over the question of a reduction of 20 per cent. in wages, has been entirely free from the type of general strikes that have occurred at frequent intervals in the Bombay mills and this has been entirely due to the *steadying influence* exercised over the workers as the result of the impassionate and thorough examination of their grievances and demands by the permanent arbitration board.

The most disastrous of the strikes which occurred in the year 1928 was that in the cotton mills in Bombay City and which alone was responsible for the loss of over twenty-two and a half million working days out of a total of over thirty-one and a half million lost to all Indian industries in that year. The direct cause of this disastrous strike which lasted from the middle of April to the beginning of October was the fear of unemployment created by the decision of certain millowners to introduce 'rational' methods of work in their mills. And although it must be admitted that the communists had no hand in the starting of this strike by the downing of tools by the workers in the Currimbhoy Ebrahim group of mills, they rapidly assumed control over affairs once it had begun and they saw to it that the conflagration soon spread to every mill in the city and island of Bombay. There were four small unions of cotton mill workers in Bombay City at the beginning of the year 1928. The most important of these was the Bombay Textile

Labour Union formed by Messrs. N. M. Joshi and R. R. Bakhale, members of the Servants of India Society in 1925. These unions formed a strike committee for the conduct of this strike. The communist leaders formed a new association of workmen in the industry and called it the Bombay Girl Kamgar Union which they registered under the 1926 Act. This union also formed a strike committee of their own. The two committees were acting in opposite directions for some time but wiser counsels prevailed and they agreed to drown their differences and to form a Joint Strike Committee of thirty members—15 from each side. This committee carried on several negotiations with the Millowners' Association, Bombay; and the Hon'ble the General Member of the Government of Bombay, Sir Ghulam Husain Hidayatallah, presided at several conferences to which the representatives of both sides were invited. When the strike first broke out neither side had made demands. The Joint Strike Committee, however, soon formed a list of such demands which is historically known as "The Seventeen Demands." These demands were met by the owners by a scheme of standard wages for all mills in Bombay City framed on the basis of a reduction of 7½ per cent. in weavers' wages. Separate schemes of standard rates were put up for mills which intended working on the basis of rationalisation. The Joint Strike Committee drew up their own lists of standard rates. At a later stage, the Association proposed a body of uniform standing orders or rules of conduct for the operatives for all mills in the city. It was obvious that these various demands and counter-demands, schemes and counter-schemes could not possibly receive the adequate and careful consideration which they deserved, in an atmosphere of turmoil and hatred. The communist leaders of the Joint Strike Committee harangued huge mass meetings of the strikers daily on the principles and advantages of communism. Relief measures were organised but funds amounting to less than two lakhs of rupees could not support nearly a lakh and a half workpeople for a period of nearly six months and large batches of cotton mill workers consequently left the city for their homes and villages.

APPOINTMENT OF BOMBAY STRIKE ENQUIRY COMMITTEE.

The strike dragged on until the 4th of October when the Government of Bombay again convened another conference of the representatives of both sides under the chairmanship of the Hon'ble Sir Ghulam Husain Hidayatallah. At this conference the representatives of the strikers consented to call off the strike if Government would agree to appoint an impartial committee of enquiry to examine the various questions under dispute. The Hon'ble the General Member gave the necessary undertaking on behalf of Government, and the terms of reference were agreed upon at the conference. The strike was accordingly called off as soon as Government announced the appointment of the committee under the chairmanship of the Hon'ble the Acting Chief Justice of the High Court of Bombay, Sir Charles Fawcett.

The deliberations of the Fawcett Committee lasted for over five months and their report which was published on the 26th March 1929 still continues to be one of the standard works of reference on conditions of employment in the cotton textile mills in Bombay City. The Committee held that the proposals of the Millowners' Association for the standardization of wage rates and for the fixation of the numbers to be employed on different types of machines were in the main fair and reasonable and that while there was justification for the Association's proposal to effect a cut of 7½ per cent. in weavers' wages there were reasonable objections to be urged against its adoption. The Committee recommended that the Association should drop the proposal if the labour leaders agreed to give their co-operation in working the scheme for the standardisation of wages. The Committee also held that that part of the standardisation scheme which was called the "Rational" or "Efficiency" system and which aimed at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable. The Committee further held that the Association's proposals with regard to standard standing orders for the operatives about the conditions of their employment were, in the main, fair and reasonable. With regard to the seventeen demands formulated by the Joint Strike Committee some of the demands which were considered to be fair and reasonable were—

- (a) That the millowners should not vary any of the prevalent conditions to the disadvantage of the workers before securing the approval of the workers through their organisations; and that the Association should not permit its individual members to vary the condi-

tions of service to the disadvantage of the workers without the sanction of the Association;

- (b) Rates of new varieties should be fixed by the Association in consultation with the representatives of the workers' organisations; and that all piece rates should be posted departmentally in detail; and

- (c) That there should be no victimisation of men who had taken part in the strike or any union activities.

Among the more important demands which were held to be unfair and unreasonable were those relating to the granting of substantial increases in wages to those workers whose average monthly wages were less than Rs. 30 and the abrogation of the new orders which had been issued requiring certain workers to clean their own machinery and to carry tickets of attendance. On balance, the findings and recommendations of the Fawcett Committee were more favourable to the workers than to the employers. The other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, the East Indian and South Indian Railways, in the Port Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore. Want of space prevents a detailed description of these disputes; but it may be stated that a significant feature of the disputes during the year 1928 was the growth of picketing and intimidation which in some cases resulted in violence and bloodshed. In the Bombay Cotton, the Bengal jute and the two railway strikes the police were compelled to resort to firing in order to prevent the strikers from causing injury to person or damage to property. The following table gives, by industries, the main statistics in connection with the disputes of 1928:—

Classification of Industrial Disputes in 1928.

Industries.	Number of disputes.	Number of workers involved.	Days lost.
Cotton and woollen mills	110	323,484	24,851,274
Jute mills	19	64,524	1,556,808
Engineering workshops	11	37,688	3,148,706
Railways (including railway workshops) ..	9	49,400	1,874,313
Mines	1	698	5,104
Others—miscellaneous	53	31,117	211,199
Total ..	203	506,851	31,647,404

THE BOMBAY RIOTS OF 1929.

The result of the general strike in the Bombay cotton mills in 1928 was a great moral victory for the communists and the membership of the Bombay Girmil Kargar Union which they had formed during the earlier days of the strike was reported as having reached the enormous figure of 55,000 within a few months after the conclusion of the armistice of the 4th October. Government were, however, not allowing the communists to ride rough-shod over industry and labour as they did in that year and thirty of the more prominent and avowed communists were arrested in March 1929 under section 121-A of the Indian Penal Code for organised conspiracy under the direction of the Communist International and other associated bodies, to deprive the King of the sovereignty of British India; but not before their doctrines had resulted in a considerable loss of life and property in Bombay City. Towards the end of the previous year they had organised another large-scale strike of the workers of the oil companies in Bombay. This industry is manned by a considerable proportion of Pathans and the highly inflammatory speeches which the communists had delivered to the strikers in both the cotton and the oil strikes were responsible for the outbreak, in Bombay City, on the 3rd February 1929, of riots and disturbances on a scale which the city had seldom experienced before. Rioting lasted for several days and martial law had to be declared before it could be quelled. The net result of the riots was a death roll of 149 persons and destruction and damage of property valued at several lakhs of rupees. The Riots Enquiry Committee appointed by the Government of Bombay to enquire into the causes and the handling of these riots found that their origin was in the speeches which had been delivered by communist agitators during the cotton and the oil strikes.

AN ACCUMULATION OF UNREDRESSED GRIEVANCES.

The widespread industrial strife of the year 1928 brought out several facts in connection with Indian labour prominently to the surface. The most important of these was that the workers employed in Indian industries had a large accumulation of grievances which required early examination and redress, if possible. A very large majority of the settlements of the disputes that had occurred in the decade following the end of the Great War were hardly 'settlements' at all if the word is considered in the sense of solutions acceptable to both sides. In most cases the workers had been beaten into surrender owing to the fear of unemployment consequent on their places being filled up by black-leg labour or were forced into submission as the result of the complete exhaustion of their resources. Although the trade union movement had penetrated into most industries, it has not even yet, except perhaps on the spinning side of the cotton textile industry in Ahmedabad, covered the majority of the workers in any particular units or groups of units; and in no case had any union collected a sufficiency of funds to finance a strike. Very few of the existing unions had secured complete recognition by

the employers concerned and in most cases the illiterate workmen had no level-headed persons to argue their cause with their employers. In those cases where strikers had met with complete or partial success, the settlements were mostly of an exceedingly patchwork character and it was obvious to any observer that few of the existing sores had been permanently healed. Employers were still thinking of wages in terms of comparison with the levels of the pre-war year and not from the point of their sufficiency for the maintenance of a decent standard of life. No attempt was made to enquire as to how far any particular wage could be considered as a minimum wage and all discussions centred round the determination of the percentage increase over the levels of 1914.

LACK OF COMPREHENSIVENESS IN EXISTING LABOUR LAWS.

In an earlier section reference has been made to the three great pieces of Indian labour legislation passed in the years 1922 and 1923: (1) The Factories Act of 1922, (2) The Indian Mines Act, 1923, and (3) The Workmen's Compensation Act, 1923. These Acts had conferred several benefits, privileges and advantages on Indian workmen; but as compared with similar pieces of legislation in the other industrialised countries of the world, they were of an exceedingly limited scope and character. This was due to the fact that in treading new ground, the Government of India had necessarily to proceed with circumspection and a measure of caution. The original proposals formulated by the Government of India had, in all cases, been considerably modified and whittled down as a result of the opinions given by the provincial Governments and the opposition of employers' organisations when the proposals or the Bills based on these proposals were circulated for opinion. Still further modifications had to be accepted by Government in the central legislature in order to ensure a safe passage for each measure. Great credit must, however, be given to that great stalwart of Indian labour, Mr. N. M. Joshi, who has fought many a hard battle on the floor of the Legislative Assembly during the last fifteen years on behalf of Indian labour.

MR. N. M. JOSHI.

Under the Government of India Act, 1919, one seat (nomination by Government) is reserved for Indian labour. Mr. N. M. Joshi has been nominated to represent Indian labour at each successive Assembly since the introduction of the reforms. He has attended several sessions of the International Labour Conference and is a member of the Governing Body of the International Labour Organisation. Of all the labour leaders in India, Mr. Joshi has had unique opportunities of studying almost all questions connected with labour and there is to-day nobody in India who is better qualified to speak on behalf of Indian labour as a whole. Mr. Joshi has successfully moved various resolutions both in the Indian Legislative Assembly and at the International Labour Conference for enquiries into several phases of conditions of employment in Indian industries and for the introduction of new labour laws for India. If India, to-day,

has a code of labour laws which compares very favourably with the similar codes of other countries it is due largely to the influence and the pressure which Mr. Joshi has brought to bear on the Government of India and the Indian Legislative Assembly in the matter.

APPOINTMENT OF A ROYAL COMMISSION ON INDIAN LABOUR.

Reverting to the labour laws of 1922-1923, seven years' administration of these laws had brought several defects to light. Certain administrative defects had been rectified by Amending Acts but it was gradually felt that much of the legislation was of a very halting character and that it did not go far enough. Several trade union leaders who had attended ten successive sessions of the International Labour Conference as Labour Delegates or Advisers had availed themselves of the opportunity offered by their being sent to Geneva of making enquiries and studies of labour questions in European countries before returning to India. After their return to India, these leaders started newspaper and platform agitation for both reform and expansion of the existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey and investigation by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment, by His Majesty the King Emperor, of a Royal Commission on Indian Labour "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India; on the health, efficiency and standard of living of the workers; and on the relations between the employers and the employed; and to make recommendations." The late Rt. Hon. J. H. Whitley was appointed Chairman. The other members of the Commission were the Rt. Hon. Shrinivasa Sastri, P.C.; Sir Alexander Murray, Kt., C.B.E.; Sir Ibrahim Rahimtoola, K.C.S.I.; K.B.E.; C.I.E.; Sir Victor Sassoon, Baronet; Dewan Chaman Lal, M.L.A.; Miss Beryl M. Le Pogor Power, Deputy Chief Inspector, Trade Boards, England and Messrs. A. G. Clow, C.S.I., C.I.E., I.C.S.; N. M. Joshi, M.L.A., Kabeeruddin Ahmed, M.L.A.; G. D. Birla, M.L.A.; and John Cliff, Assistant General Secretary, Transport and Railway Workers' Union, England. Mr. S. Lall, I.C.S., and Mr. A. Dibdin from the India Office, London, were appointed Joint Secretaries, and Mr. A. H. Green, Assistant Secretary. Mr. S. R. Deshpande, Assistant Commissioner of Labour, Government of Bombay, was appointed Statistician and Lt. Col. A. J. H. Russell, C.B.E., Medical Assessor to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the railways and associations of the employers and the employed left for England on the 22nd March 1930 to collect further evidence in that country. The Commission returned to India in the month of October of the same year and after completing that part of their tour which had been left unfinished in the previous winter, went to Delhi in November to draft their Report.

1929—A YEAR OF CROWDED EVENTS.

The year 1929 was a very momentous one in the history of the labour movement in India crowded as it was with events of prime importance. References have already been made to the Bombay riots, the arrest of communist Leaders, the publication of the Report of the Bombay Strike Enquiry Committee and to the announcement of the appointment of a Royal Commission on Indian Labour. Mention has also been made of the passing of the Trade Disputes Act in that year. An Act amending the Workmen's Compensation Act was also passed by the central legislature and the Government of Bombay took the initiative in provincial labour legislation by passing a Maternity Benefits Act providing for Monetary compensation by factory employers to their women workers for loss of wages during periods immediately prior to and following confinement.

The chief communist leaders had been arrested but their henchmen were not. Inbued with communist principles, these endeavoured to carry on the industrial strife of the year before. The Bombay Girmi Kamgar Union continued to claim a membership of over 50,000; but when the Millowners' Association, Bombay, set themselves to the task of implementing such of the Fawcett Committee's recommendations as required joint consideration by the representatives of both parties, they found that there was nobody who was in a position to "deliver the goods" on behalf of labour. Such joint meetings as were held were not fruitful of any results and when a dispute arose in the Spring Mill in the month of April over the question of the dismissal of one worker, The Bombay Girmi Kamgar Union made this a *casus belli* for the declaration of another general strike in the cotton mill industry. This strike, however, did not extend to all the mills in the city and island of Bombay as that of the previous year had done but still it was of a fairly general character involving 108,232 workers in 62 mills. It lasted from the 26th April to the 18th September and was responsible for a total time loss of nearly seven million working days. The Government of Bombay took advantage of the new Trade Disputes Act and appointed a Court of Enquiry under the chairmanship of the Hon. Mr. Justice Pearson of the Calcutta High Court to make a full investigation into the causes of the strike. The Court sat continuously for over a month and in their report which was published on the 16th September they came to the unanimous conclusion that the whole of the blame for the calling and the continuation of this strike rested with the Bombay Girmi Kamgar Union. The moral effect of this report was so great that the Union called off the strike unconditionally on the day following its publication.

Another important strike which occurred in India during the year 1929 was one of the employees of the B.B. & C. I. Railway's Loco. and Carriage Workshop at Dohad. The railway administration had transferred a number of operatives from their big workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad

allowances and failing a restoration of the cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims.

SPLIT IN THE ALL-INDIA TRADE UNION CONGRESS.

The last important event in this year of crowded events was the split which occurred in the Trade Union Congress at its tenth session which was held in Nagpur in the month of November of that year under the presidency of Pandit Jawaharlal Nehru. The Trade Union Congress was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual labour unions in India which till then remained inchoate and were unable to take concerted action; and (2) to recommend workers' delegates to the various sessions of the International Labour Conference. It remained the central organisation of the trade union movement in India for nearly a decade and most of the important unions in India were affiliated to it. The Congress met in a full-dress session once every year and discussed various leading questions connected with Indian labour. Early in 1929 the Bombay Girni Kamgar Union and the G.I.P. Railwaymen's Union two organisations controlled almost entirely by communists secured affiliation to the Congress. As the elections to the executive body of the Congress are conducted on the basis of the membership strength of the individual affiliated unions, the communists were able to capture a majority of the seats on the executive through the membership of these two unions and the tenth session was therefore entirely dominated by the communist section of the movement. Resolutions were passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League Against Imperialism and for the appointment of the Workers' Welfare League, a communist organisation in England, as agents of the Congress in Great Britain. The passing of these resolutions marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by communist agents in India and brought to a head the question whether the trade union movement in India should be under the leadership of genuine trade unionists or of the votaries of communism. The moderate sections under the leadership of Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. R. Bakshale and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of *The Indian Trades Union Federation* in order to co-ordinate the activities of non-communist trade unions in India. Further details in connection with these two all India federations, their quarrels, the further split in the Congress and the attempts made for unity will be dealt with in the chapter on *Trade Unionism and Trade Union Law*.

THE CALM AFTER THE STORM.

The third decade of the twentieth century had been a most momentous period in the history of labour in India crowded as it was

with almost continuous industrial strife, the appointment of committees and commissions to enquire into and make recommendations in connection with the causes of this strife and the laying of the foundation stones for a first class code of labour laws for the country. The prolonged and disastrous strikes of the years 1928 and 1929—especially of the latter year in the storm centre of India's principal industry—had completely exhausted the resources of the workers. In the opening paragraph of this note it was stated that the agricultural character of the industrial worker in India and the permanent contact which he maintains with his land was the prime factor for the proper understanding of the several problems connected with labour in India. General strikes of three to six months' duration without financial assistance and strike benefits from workmen's organisations would be impossible to understand if industrial town dwellers did not have agriculture and their village homes to fall back upon during periods of prolonged stoppages of work. Statistics collected during each of these big disputes showed that after the first few weeks of their start there were exoduses of large groups of workers to their village homes. Such of them as remained in the towns sold their trinkets and possessions, fell into arrears with their rents and explored their credit to the fullest with *banias* (native money-lenders) and retail shopkeepers for food supplies. The history of each of these disputes shows that it takes several weeks after the termination of each dispute for a unit to get back to full strength working because the workmen have to return from distant places to which the news of a re-start of work takes a very long time to filter through; and even then it is only the pressure on the land which forces the agriculturist to make a further temporary return to industry.

After the end of the general strike in the cotton textile mills of Bombay of the year 1929, trade unionism, except perhaps in Ahmedabad, was thoroughly discredited. Both the workmen and such of their organisations as existed had been defeated most ignominiously and the workers began to lose faith in their leaders. *Banias* and landlords were clamouring for the repayment of debts and it was becoming very necessary to put in as much steady work as possible. The schemes of standardisation of wage rates which had been approved of by the Fawcett Committee had been temporarily shelved. This standardisation, even without a general cut in wage rates, would have reduced the earnings of several thousands of workers in the process of levelling down to standard rates. On the other hand those of several other thousands of workmen would have been improved in the process of levelling up. But the poorer mills which were paying low rates of wages were naturally most disinclined to increase their wages bills and the Millowners' Association, Bombay, decided to allow sleeping dogs to lie. The annual averages of the monthly cost of living index numbers (1914=100) were 147 for 1928 and 149 for 1929. This annual average fell to 137 in 1930 and there was a further drop of more than 25 points in the average for the year 1931. Apart from a few alterations in piece rates of wages for new sorts and other minor adjustments, there had been

no wholesale reductions in wage rates in any of the larger centres of the textile industry in India since the cut of 15 per cent. in the wages of the cotton mill workers in Ahmedabad in 1923 and with each successive fall in prices, real wages naturally improved. Apart from the question of the sufficiency of the existing rates for the maintenance of a decent standard of life, the wage rates prevalent in 1930 and 1931 did permit margins for wiping out old debts and as the employers made no general move in these two years to reduce rates, this period was one of comparative industrial calm for the whole country. Stray strikes over matters connected with personnel or with minor grievances continued to occur at frequent intervals but these were mostly settled by the replacement of the disaffected elements from the ranks of the unemployed owing to the weakening of the bonds of solidarity among workmen and to the absence of trusted leaders. The Royal Commission on Indian Labour were, moreover, engaged in making a full and comprehensive enquiry into conditions of employment and as the workmen were aware that the members of the Commission were visiting several mits all over India to personally see things for themselves, Indian industrial labour was content to wait till such time as the Commission's report was published instead of taking the initiative into its own hands as it had frequently done during the last ten years.

The Government of the Central Provinces and Berar followed the Government of Bombay by passing a Maternity Benefits Act in 1930. In 1931, the Government of India appointed a Court of Enquiry under the Trade Disputes Act to enquire into certain questions affecting labour arising out of the large reductions which Indian railways were making in their staffs. This Court made certain recommendations regarding the absorption of the retrenched men in other industries and for their re-employment when suitable opportunities arose in the future and also for the payment of a more generous scale of retirement gratuities. The workers on this occasion, however, had to accept the inevitable and they were not slow in recognising the elementary and cardinal principle that no organisation could possibly maintain staffs which were surplus to requirements. The extreme left wing in the leftist Trade Union Congress came to the conclusion in 1931 that the Congress was not as revolutionary as what it should be and this element broke away to form the All-India Red Trade Union Congress. It thus happened that instead of there being one co-ordinating body at the apex of the trade union organisation in the country to guide and control the movement, there were four separate federations the majority of which were useless and effete bodies with little influence and trifling membership.

PUBLICATION OF THE ROYAL LABOUR COMMISSION'S REPORT.

The most notable event in the world of Indian labour during the year 1931 was the publication, in the month of June, of the report of the Royal Commission on Indian Labour. The report is a document of first-rate importance dealing with almost every aspect of the labour problem

in India and it contains many hundreds of recommendations covering a very wide field of subjects. The value of the Commission's recommendations are considerably enhanced by two facts: firstly, by the considered opinions which were brought to bear on the various matters discussed by a thoroughly representative body of persons representing as they did both the employers and the employed and legislators and Government officials; and secondly, by the almost complete unanimity with which the various groups comprising this body reached their conclusions and decisions on matters which must necessarily have been discussed with expressions of widely divergent views. The Report has been the lodestar of all the various pieces of labour legislation which have been placed on the Indian Statute Book since its publication; and it will continue to be the text-book for social legislation and labour welfare in India for many years to come.

A summary containing the principal recommendations of the Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India classified these recommendations under six different groups according as they involved or required Central or Provincial legislation, administrative action by the Central or Provincial Governments or action by public and local bodies or by employers' or workers' organisations, and forwarded them to various local Governments and bodies requesting them to give such of the recommendations as concerned them due and adequate consideration and to initiate provincial legislation wherever necessary. The Government of India have published annually since 1932 reports on the action taken by the Central and provincial Governments on the Commission's recommendations and these reports are on sale at the Government of India Book Depots at Delhi and Calcutta. Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers and Workmen (Disputes) Act which had been passed as early as 1860 for the speedy determination of disputes relating to wages of certain classes of workers employed on the construction of railways, canals and other public works and which had been almost a dead letter was, in accordance with a recommendation made in the matter by the Royal Commission, repealed in 1932. Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Act to control the deductions which employers may make from wages in respect of fines and to provide for the early payment of due wages was passed early in 1938. Various other proposals for

new labour legislation in connection with employers' liability (re: "common employment" and "assumed risk"), extension of workmen's compensation to agriculture and forestry, fixation of hours of work of dock labourers, allotment of seamen's wages, exemption of salaries and wages from attachment, the shortening of wage periods, arrest and imprisonment of industrial workers for debt and for the prevention of the besetting of industrial establishments by money-lenders for the recovery of debts, have been circulated by the Government of India to the various provincial Governments for opinion and some of these have resulted in the introduction of Bills in the legislature. It is very unlikely, however, that all these proposals will result in legislation, because very weighty objections have been raised during circulation on the various practical difficulties which would have to be contended with in the administration of any laws that may be framed to govern these matters. The Department of Industries and Labour of the Government of India are at present engaged in formulating proposals and/or a Bill for the control of those factories which do not use power and which are not regulated in any way at present. Other matters will be taken up in due course.

It will have been noticed that nothing has been stated so far in this section regarding the actual recommendations which the Royal Commission have made. But as already stated, these run into several hundreds and the more important of them were reproduced in the 1932 edition of this publication. Nor has anything been stated yet with regard to the action taken by provincial Governments, public bodies and employers' and workers' organisations on such of the recommendations as they were concerned with. In this connection there is very little indeed to report because financial stringency in most provinces and with most bodies has prevented any substantial measure of action. It is obviously impossible for us to attempt even a brief summarisation of the Royal Commission's report and recommendations and the action taken thereon in a compact book of reference such as *The Indian Year Book*; but as it might be of considerable interest to the users of this reference book to have information readily available on such of the Commission's recommendations as have already been implemented or which are proposed to be implemented in the near future, references will be made to these recommendations in each of the various sections into which this note has been divided. For example, the Commission's recommendations relating to workmen's compensation will be dealt with in the chapter on that subject.

BEGINNING OF A PERIOD OF LARGE WAGE-CUTS.

The sharp downward trend of prices which set in about the middle of the year 1930 continued till May 1933 when the cost of living index for working classes in Bombay City touched par or 100 (1914=100). Wages in most industries, on the other hand, had continued almost at the same high levels of 1929-30—in many

cases rates early in 1933 were double or more than double those prevalent in 1914. Following the cut of 15·625 per cent. in wages which had been effected in the Ahmedabad cotton mills in 1923, the cotton mill workers in that centre had submitted a demand for a restoration of the cut in 1928. The matter was, as usual, referred to the permanent arbitration board. On the board failing to reach an agreement in the matter, the question was referred to an umpire (Dewan Bahadur Krishnalal M. Jhaveri) who awarded an increase of 8 per cent. in the rates for the workpeople on the spinning side and of five per cent. for those on the weaving side of the industry. The conciliation board appointed in connection with the Dohad dispute had decided in favour of the workers and against the administration of the B. B. & C. I. Railway. Employers, therefore, were beginning to feel that the public generally and impartial arbitrators and conciliators in particular were determined that the standard of life which Indian industrial workers had attained as a result of the hard battles which they had fought must be maintained. They were, therefore, very chary of initiating proposals for reductions in rates. The commencement of the year 1933, however, saw the beginning of a new wave of depression in industry. Jute mills had already resorted to short-time working and several cotton mills and other factories were being compelled to close down. One firm of managing agents who controlled ten large cotton textile mills in Bombay City crashed and as a result of this crash all the mills under their control were compelled to stop work. Several of the mills under the control of another large firm of managing agents had to suspend work temporarily. The remaining mills were faced with two alternatives—(a) to reduce wages and so to lower costs of production, or (b) to close down. The technical wages sub-committee of the Millowners' Association, Bombay, to whom the question of the necessity for a reduction in wages had been referred earlier in the year reported against the advisability of collective action in the matter and advised that each individual affiliated unit should take independent action. Hitherto, the Association had adhered to the principle of collective action and the dearth of food or war allowances in all the cotton mills in Bombay had remained at 80 per cent. over basic rates for weavers and 70 per cent. for spinners and women. Reference has often been made in this note to "basic rates" of wages. This should not be taken to mean that there existed in any industry in India a standard scale of wage rates at any particular period. The term 'basic' simply applies to the rates, prevalent at some remote date, on which percentage allowances were given instead of direct consolidated increases. Rates of wages in Indian industries vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry in the same centre and also between the different individuals in the same occupation in one individual unit. If the same or similar rates of wages are found in any two or more units in any centre this is due merely to coincidence and not to any deliberate action in the matter. Therefore, although the consolidated allowances remained at 80 and 70 per cent. in the cases of all mills,

the basic rates on which these allowances were granted varied widely between mill and mill and cases are not unknown where the cumulative rates (basic rates plus allowances) in one mill are almost double those for the same type of work in another.

Acting on the recommendations made in the matter by the Bombay Millowners' Association, the affiliated mills started adopting individual measures in effecting reductions in rates by announcing varying cuts in the dearness allowances. Certain mills resorted to the device of closing down completely for a few months and reopening on reduced rates. At one stage during the year 1933 more than 50,000 cotton mill operatives in Bombay City had been thrown out of employment as a result of permanent or temporary closures of some mills and partial working in others. Many of these had gone back to their village homes but many remained in the city in the hope of securing employment either in their own or in any other mill which would start work. The unemployed workers were literally on the verge of starvation and they were consequently ready to accept work on any wages that were offering. It would have been futile for the operatives in the working mills to attempt a general strike because in a few cases where certain groups of workers preferred to leave their jobs rather than to accept reduced rates, their places were at once filled from the ranks of the hundreds of the unemployed who were clamouring for jobs. The success achieved by some mills in effecting reductions without strikes emboldened the rest to follow suit. Some of the earlier mills which had effected small cuts as a preliminary 'try-out' administered second larger doses when they saw other mills getting away with larger cuts and by the beginning of the year 1934 almost every mill in Bombay had effected substantial reductions in their rates of wages.

Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay Mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent. The industrial constitution in this centre, however, demanded that the matter should be referred to the permanent arbitration board. Mr. M. K. Gandhi, a labour member of this board, was at the time very busy with his several other political and social preoccupations and his health was also far from satisfactory. He therefore requested the Millowners' Association and the Textile Labour Association to prepare their respective cases for and against the reduction and also to discuss the main questions between themselves in order to arrive at as great a measure of agreement as possible. These negotiations and the subsequent discussions between the members of the board were carried on for over a year and it was not till the beginning of the year 1935 that an agreement was concluded on the basis of a uniform cut of 61 per cent. subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days. In recounting the course of events in Ahmedabad those in Bombay have been anticipated by about a year.

INSTITUTION OF A DEPARTMENTAL ENQUIRY INTO WAGE CUTS.

The year 1934 in the world of labour in Bombay opened with an insistent demand by the more moderate labour leaders, particularly Mr. R. R. Bakhale, M.L.C., for an impartial enquiry into the wage cuts and unemployment in the cotton mill industry in the Bombay Presidency. The agitation for such an enquiry was taken up by the press and His Excellency the Governor of Bombay granted several interviews to the representatives of the Millowners' Association and to Mr. R. R. Bakhale in order to discover a *via media* which would be satisfactory to both sides. As a result of these and other discussions, the Honourable Sir Ghulam Husain Hidayatallah Leader of the House, made the following announcement in the Bombay Legislative Council on the 26th February 1934 :—

"Government having observed that reductions in wages have been effected or are in contemplation in several centres of the cotton mill industry in this Presidency, consider it desirable that the fullest possible information should be obtained and made available to the public on this important matter. Government is further of opinion that the quickest and most satisfactory method of achieving this object is by departmental enquiry. They have, therefore, instructed the Labour Office to make a special investigation in order to ascertain the following facts :—

- (a) the extent of the reduction in wages of workpeople employed in the cotton mills in the Bombay Presidency since 1st January 1926 ;
- (b) whether these reductions have been uniform in the cotton mills at each centre of the industry ;
- (c) whether the cost of living of the working classes has fallen during this period and to what extent ;
- (d) what has been the average rise or fall in real wages during this period in the various centres of the industry ;
- (e) where wage reductions have been effected or are contemplated, the reasons therefor ;
- (f) the extent to which "rationalisation", for example, "efficiency schemes" have been introduced in the cotton mills of the Bombay Presidency, and the effect such schemes have had upon wages and the conditions of work of the operatives ; and
- (g) what is the extent of unemployment in the cotton mill industry and what are its causes."

In accordance with the above announcement the Commissioner of Labour, Mr. J. F. Gennings, C.B.E., was instructed to proceed with the enquiry and he appointed Mr. S. R. Deshpande, Assistant Commissioner of Labour, to take charge of all the field work and collection of evidence. Mr. Deshpande, together with the Labour Officer at Ahmedabad and a statistical assistant of the Labour Office (Mr. S. S. Rajagopalan, B.A.) visited every cotton mill in the

Presidency and procured full information on wages and on the seven terms of reference given above. It was unfortunate that whilst the Departmental Enquiry was in progress, the cotton mills in Bombay City were again affected by a prolonged strike of a semi-general character. There was also a general strike in all the cotton mills in Sholapur but this lasted for over three months. In order to trace the causes of this strike we must leave the work of the Departmental Committee *pro tem* and go back to the arrest of the thirty communist leaders early in 1929 on charges of sedition and organised conspiracy to deprive the King of his sovereignty of British India.

THE FAMOUS MEERUT TRIAL.

The trial of the thirty communist leaders in what is now historically known as the famous Meerut conspiracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr. Yorke the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison, three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. All the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Sessions Judge of Meerut. The convictions of three persons were maintained to the extent that their sentences were reduced to the terms of imprisonment already undergone by them and they were ordered to be released from jail. The convictions of nine persons were set aside and they were ordered to be released forthwith. Such of the communists as were acquitted and were subsequently released from jail made frantic efforts to regain their hold on trade unions, and actually succeeded in getting into some of the more important of them—notably the railway unions and the Bombay Ginni Kangar Union. Assisted by such of the extreme leftists as had not been jailed they formed a labour committee on an all-India basis early in 1934 to call a general strike in all cotton mills in India. The partial strike in the Bombay cotton mills in April and May and the general strike in the Sholapur mills were almost entirely due to the efforts launched by this committee but with the exception of Bombay and Sholapur they did not meet with any appreciable measure of success in any other centre of the industry in the rest of India.

THE PUBLICATION OF THE REPORT OF THE DEPARTMENTAL ENQUIRY.

The report of the Departmental Enquiry conducted by the Bombay Labour Office was published on the 21st June 1934 and the strike in the Bombay mills was called off almost simultaneously. This enquiry was perhaps the most comprehensive of its kind that had yet been undertaken in India into wages and conditions of work in the textile industry and the information and revelations which it contained were the subject of an India-wide discussion on public platforms and in the press. The Departmental findings on the various questions referred to the Labour Office for enquiry were as follows:—

1. *Extent of Wage Reductions.*—Wages in Bombay City were lower by 21 per cent. in April 1934 as compared with July 1926 and in Sholapur by 17 per cent. Wages in Ahmedabad had risen between five to six per cent. during the same period.

2. *Question of Uniformity in the Reductions.*—The reduction in Sholapur was uniform in all mills but as the Bombay Millowners' Association permitted its members to take independent action as they pleased, the extent of the cuts varied widely between mill and mill.

3. *Extent of Fall in Cost of Living.*—The cost of living had fallen in all centres. Taking July 1926 as 100, it fell by 29 points in Bombay City in April 1934. In Ahmedabad City, the fall in December 1933 as compared with August 1926 was 31 per cent. and in Sholapur there was a fall of 28 per cent. between February 1927 and December 1933.

4. *Position re: Real Wages.*—Bombay, April 1934 eleven per cent. higher than in 1926; Ahmedabad 54 per cent. higher; and in Sholapur 15 per cent. higher.

5. *Reasons for Wage Cuts.*—The reason most generally given was trade depression. Other reasons varied with the centres. In Bombay it was stated that it was necessary to reduce the cost of production, and labour costs were those most capable of reduction as the fall in the cost of living would enable the workers to maintain the standard of life they had in 1926 even after wages were reduced. As regards Ahmedabad, there was no general reduction of wages at the time but such a reduction was contemplated owing to diminished profits and the wage reductions in other centres. In one centre wages were reduced owing to the probable coming into operation of the 54 hours week.

6. *"Rationalisation" and its Effects on Work and Conditions.*—That method of rationalisation which takes the form of asking operatives to mind more machines than formerly had made the greatest progress in mills in Bombay City. In Ahmedabad, rationalisation had been particularly directed towards improving the efficiency and types of machines used. The effect of rationalisation on earnings varied from mill to mill. In the few cases where rationalisation had not been accompanied by wage cuts, the workers were getting about 50 per cent. more than they did before rationalisation was introduced; where it was accompanied by wage cuts the workers were not getting any more,—the extra rates for minding more machines being neutralised by reductions in wages. The effects of rationalisation on the conditions of work had been beneficial because the workers were either working a shorter day or their work had been rendered easier. In Bombay, one form of rationalisation was to ask a weaver to mind four looms instead of two. In Ahmedabad, the system had not been adopted but double side working in the frame department was developing and better mixings and the production of finer cloth had increased

rapidly. Where operatives were attending more machines than formerly, the workers had usually been given 35 to 60 per cent. more wages in ring spinning, and 50 to 75 per cent. more on the speed frame. But some benefit from the increased efficiency of the plant had been passed on to some workers in the form of higher earnings on those machines. In other centres there had been very few changes in machinery or methods. The general effects of rationalisation, in so far as one is able to generalise, had been beneficial to the workers.

7. *Extent of Unemployment and its Causes.*—For lack of any agency official or non-official for collecting statistics of unemployment, it was very difficult to formulate an answer to this question. 28,000 workers had lost their employment in cotton mills in Bombay. (The reopening of closed mills and the employment of workers on night shift had, however, more than absorbed this number by the end of the year 1934.) In Ahmedabad, 26,551 more operatives were employed in cotton mills than in 1926 and in Sholapur the number employed was more or less stationary.

The publication of the report of the Departmental Enquiry was followed by several conversations between His Excellency the Governor of Bombay and the Hon'ble the General and Home Member on the one hand and the representatives of the Millowners' Association, Bombay, and representative labour leaders on the other. The Association submitted to Government a simple scheme of standard rates for unorganised occupations on time rates of wages for affiliated mills in Bombay City and they also agreed, in cases where the dearness allowance for weavers had fallen to less than 40 per cent. to raise this allowance to 40 per cent. after the coming into effect of the 54-hour week on the 1st January 1935.

BOMBAY PASSES A TRADE DISPUTES CONCILIATION ACT.

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act makes provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible; and (2) for the appointment of the Commissioner of Labour as an ex-officio Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. The Chief Conciliator is given powers to summon parties and witnesses and to call for such documents as may be necessary. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he has come to be regarded almost as an industrial judge whose decision has so far been mostly accepted by both the parties to a dispute. When the Bill for this piece of legislation was submitted to the Bombay Legislative Council, the Millowners' Association, Bombay, gave an

undertaking to Government that if the Bill was passed they would also appoint a Labour Officer of their own whose main duties would be to use his influence with mill managements on behalf of the workers and who would endeavour to secure a certain measure of co-ordination in conditions of work as between the different mills in Bombay. Mr. W. B. Gilligan, I.C.S., was the first Government Labour Officer to be appointed under the Act. When Mr. Gilligan went on leave in November 1935, he was succeeded by Mr. W. Pryde, I.P. Mr. J. E. Jennings, C.B.E., Commissioner of Labour, is the ex-officio Chief Conciliator and Mr. C. A. Dalal, B.Sc. (London) is the Labour Officer of the Millowners' Association. During the period of nearly two years for which the Act has been in force, remarkable results have been achieved and there has been an almost complete absence of industrial strife in the cotton mill industry in Bombay City since the Act came into force in September 1934.

During the 19 months ending 31st March 1936 for which the Labour Officer has functioned, the total number of complaints submitted to him amounted to 1,303. Of the 348 complaints submitted during the first quarter of the year 1936, 257 or nearly 73 per cent. were settled in favour of the workers, 17 were pending and the remainder were either unsuccessful or were withdrawn. This figure of 73 per cent. for successes may be considered as applying to the total number of complaints registered with and investigated by the Labour Officer. The number of cases referred by the Labour Officer to the Chief Conciliator during the 19 months ending 31st March 1936 amounted to 30 of which 14 were settled in favour of the workers and the remaining 16 were either unsuccessful or were withdrawn or not proceeded with.

INSTITUTION BY THE GOVERNMENT OF BOMBAY OF A GENERAL WAGE CENSUS.

By far the most notable event in the field of Government administration of matters connected with labour in India was the institution by the Government of Bombay, in 1934, of a General Wage Census to cover as many industries as possible in the Bombay Presidency. The Royal Commission on Indian Labour had recommended that before any machinery was set up for fixing minimum wages, complete surveys of wages and conditions should be undertaken for such industries in which there was a strong presumption that conditions warranted detailed investigation and that the results of these surveys should be the basis on which it should be decided whether the fixing of a minimum wage would be desirable and practicable. Until 1934 the Labour Office of the Government of Bombay had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years of 1921, 1923 and 1926. Other wages enquiries of a limited character covered municipal workers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures

of wage rates in some important occupations in selected units which are contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Government of Bombay felt that before any question in connection with the creation of wage boards for fixing minimum wages could be considered, it would be necessary to have accurate and reliable information on wages and conditions of work in as many industries as possible—both organised and unorganised. They accordingly instructed the Labour Office to first make a survey of wages and conditions in factory industries the first part of which should cover all perennial factories and the second seasonal factories.

In 1923, the Government of Bombay had introduced, in the local Legislative Council, a Bill to provide for the collection of statistics in connection with wages, prices and rents by making it compulsory for occupiers, shop-keepers and tenants to supply correct information. Owing to strong opposition from the non-official benches, particularly from the representatives of employers and vested interests, the Bill was withdrawn; and, to-day, neither the Central nor the Provincial Statute Books in India contain any Act which compels employers to furnish statistics relating to wages or shop-keepers to make returns of prices.

Preliminary enquiries which had been conducted in representative factories during the year 1933 had revealed the existence of a bewildering variety of methods and periods of wage payment as between unit and unit and also the use of a variety of English, vernacular and local names for designating occupations. It was moreover felt that if results of any value were to be secured from a general wage census, it should cover all or as many units as possible; and that, in the absence of a Statistics Act, it would be necessary to secure the willing co-operation of as many factory managements as possible. It was also necessary to draw up uniform forms which would be equally applicable to all industries. With this object in view, an Assistant Commissioner of Labour (Mr. N. A. Mehrban, B.A., F.S.S.) assisted by a statistical assistant from the Labour Office (Mr. R. G. Gokhale, B.Com.) visited every one of nearly 750 perennial factories in over 80 towns and villages in the Bombay Presidency between January and May 1934. All manufacturing processes at each of these factories were examined and with the assistance of technical experts in each industry, lists of standard occupational terms were drawn up for all industries. The whole of the administrative, clerical and labour staffs at each factory were properly classified according to their correct occupational designations and full instructions were left at each factory with regard to the manner in which the census forms were to be filled up. This first part of the census was for the month of May 1934 with variations to suit local conditions. The forms together with a general questionnaire containing over 60 questions covering all phases of wage payments, conditions of work and welfare, and standard lists of occupational terms were issued to all perennial factories early in the month of June and second and third visits were paid to almost every factory for the purpose

of securing both uniformity and accuracy in the returns. It reflects great credit on the staff of the Labour Office that not one of the perennial working factories in the Bombay Presidency failed to submit full information.

The Government of Bombay propose to publish the results of the first part of the General Wage Census in a series of six reports, the first four covering wages, hours of work and conditions of employment in the engineering, printing, textile and other miscellaneous industries, the fifth covering salaries and conditions of employment of supervisory staffs in perennial factories and the last being a general report covering all industries. The first report of the series covering the engineering trade was published in December 1935 and the second covering the printing industry was published early in March 1936. Both these reports contain a fund of most valuable information regarding wage rates, earnings and conditions of employment and they should be of the greatest possible value to both employers and the employed, to Government administrations, to economists and to the public generally. Copies of these reports can be had from the Government Book Depot, Bombay or from the High Commissioner for India in London.

FIRST ASIATIC LABOUR CONFERENCE.

The year 1934 was a year of notable events for Indian labour. The first Asiatic Labour Conference attended by delegates from Japan, India and Ceylon was held at Colombo on the 10th and 11th May. Messrs. N. M. Joshi, Jannadas M. Mehta, S. C. Joshi and W. Francis represented India. Dr. P. P. Pillai, Director of the Indian Branch of the International Labour Office and Dr. F. I. Ayusawa, a member of the International Labour Office staff at Geneva also attended the Congress. A constitution for the Congress was drawn up and several resolutions dealing with various aspects of the labour problem were adopted.

In the month of August, the Government of Bombay launched a prosecution against eight leaders of the textile strike of April-June on the grounds (1) that some of the demands made or formulated by the strikers were not in furtherance of a trade dispute; and (2) that the strike was designed to inflict severe, general and prolonged hardship on the community and thereby to compel the Government to take or abstain from taking some particular course of action. The accused were charged under sections 16 and 17 of the Trade Disputes Act, 1929, as being persons who incited others to take part in an illegal strike. The Chief Presidency Magistrate, Bombay, who tried the case, held that the strike was not illegal within the meaning of sub-section (1) of section 16 of the Act and acquitted all the accused on the 23rd October 1934. The Government of Bombay preferred an appeal against the decision of the Chief Presidency Magistrate and the appeal was admitted by the Bombay High Court. The Honourable the Chief Justice and Mr. Justice N. J. Wadia who heard the case, agreed with the findings of the Chief Presidency Magistrate and dismissed the appeal.

THE INDIAN FACTORIES ACT, 1934.

The Royal Commission on Indian Labour made several very important recommendations for substantial amendments of the Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours; secondly, for the improvement of working conditions in factories; and thirdly, for a more effective observance, on the part of factory owners, of the requirements of the Act. The Government of India accepted most of the Royal Commission's recommendations and drew up a draft Bill for an entirely new Act. This was circulated to all provincial Governments in June 1932 for opinion. On the receipt of the replies from local Governments, the Honourable Member in charge of the Department of Industries and Labour of the Government of India made a tour of the more important industrial centres in India to discuss various questions arising out of the draft Bill with the representatives of local Governments and associations of employers and workmen. On the conclusion of this tour, the Government of India convened a conference of provincial chief inspectors of factories and a final Bill was then drawn up and this was introduced in the Legislative Assembly on the 8th September 1933. It was passed into law at the summer session of the Assembly at Simla in 1934 and received the assent of the Governor-General on the 20th August of that year. The new Act was brought into effect from the 1st January 1935.

Full details have been given in this note of the first factories Act of 1881 and of the subsequent amending Act of 1891, of the 1911 consolidating Act and of the Amending Act of 1922. The Amending Acts of 1923, 1926 and 1931 did not introduce any new principle of major importance and were merely intended to remove administrative difficulties. All the new features introduced by the 1934 Act were incorporated as a result of the recommendations of the Royal Commission. The main provisions of the Indian factory law as it stands to-day are given below with notes regarding the new principles which were introduced by the 1934 Act.

(a) *Classification of Factories.*—A distinction is drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication of ground-nuts or the manufacture of ground-nut oil, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a local Government may, by notification in the local official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The local Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

(b) *Age and Sex Groups.*—Prior to the 1934 Act, factory operatives were divided into three age and sex groups: (1) adult males, (2) adult females, and (3) children of both sexes, i.e., persons over 12 and under 15 years of age. A fourth group of 'adolescents' has now been introduced. These are defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(c) *Hours of Work.*—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to nine per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(d) *Spreadover.*—The principle of "spread-over", i.e., the limitation of the period of consecutive hours during which the daily limits of hours of work may be availed of by the owner or occupier of a factory was introduced in factory legislation for the first time. The spreadover in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults and of sixteen and a half-free hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, e.g. in the fish curing industry, continues to be allowed.

(e) *Artificial Cooling and Humidification.*—The provisions incorporated in the 1922 Act with regard to the control of artificial humidification were expanded. A new principle was introduced whereby power was given to local Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) *Welfare.*—The Government of India did not accept the recommendation of the Royal Commission with regard to the giving of the power to local Governments to issue welfare orders such as are issued by the Secretary of State in England under section 7 of the Police, Factories, etc. (Miscellaneous Provisions) Act of 1914. They were of opinion that the matters

to be covered by such welfare orders should have the approval of the legislature and should not be imposed on owners by the executive Government. The new Act has, however, made provision for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances; (2) for adequate shelter for rest in factories employing more than 150 persons; (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women; and (4) for the maintenance of adequate first aid appliances.

(g) *Rest Intervals and Holidays.*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(h) *Overtime.*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. When a worker in any factory works on the weekly rest day, he is to be entitled in respect of the overtime worked to pay at the rate of one and a half times the ordinary rate of pay.

(i) *Certificates of Fitness for Children.*—All the earlier Factory Acts contained provisions for the certification, by certifying surgeons, of the age of children seeking employment in factories. The 1934 Act went a step further and gave powers to local Governments to make rules prescribing the degree of fitness to be attained by such children and laid down that whenever such a standard has been laid down, no child failing to obtain it can be certified for employment in a factory.

(j) *Security of Factory Structures.*—Another new feature of the 1934 Act is the power which has been given to factory inspectors to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Local Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.

(k) *Exemptions.*—A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limited these powers and prescribed further that no exemptions were to be granted in respect of the provisions for spreadover, prohibition of night work and the limitations of weekly hours for women and persons under the age of sixteen years; but, as already stated, night work for women was permitted in fish curing factories.

(l) *Notices, Records and Registers.*—The 1934 Act provides more effective methods for the maintenance of records and registers of employment; the posting of notices, for the benefit of the workers, of their hours of employment; the prescribed abstracts of the Factories Act, weekly holidays, etc., and for the notification of these notices and any changes proposed to be made in them to inspectors of factories.

(m) *Fines and Penalties.*—Higher penalties and fines are prescribed for occupiers or owners of factories who have been previously convicted for having committed the same offences.

At the moment of writing it is not possible to offer any comments on the working of the Factories Act of 1934. The annual provincial reports on the administration of the factory laws are seldom ready before the middle of the year following that for which they are prepared and the compilation of the all-India report which is begun after all the provincial reports have been received by the Government of India is usually published about six months later. The first all-India report on the working of the new Act will not be available, therefore, till the end of the year 1936. It is not likely that factory workers outside the textile industry are likely to have been very much affected in regard to the new restrictions relating to hours of work because, in most cases, weekly hours were already 54 or under before the 1934 Act came into effect. In textile mills, some owners reduced the daily hours whereas others, taking advantage of the shorter week, worked a ten-hour day as before for five days in the week and gave their workpeople a half holiday on the day preceding the weekly rest day.

JANUARY 1935 TO MARCH 1936.

The year 1935 opened with the Government of Bombay adopting a new angle of vision with regard to industrial disputes. The attitude of both the Central and the Provincial Governments towards industrial disputes in India during the previous fifteen years was one either of *laissez faire* or as long as law and order were maintained or of interference only in such cases where particular disputes resulted in breaches of the peace. Compared to the total number of strikes which had occurred in the country, the number of cases in which committees of enquiry had been appointed to carry out investigations and to submit reports or in which official conciliators had taken the trouble to bring about settlements which would be acceptable to both parties was very small indeed. But, the success which met the efforts of the Labour Officer appointed under the Bombay Trade Disputes

Conciliation Act for the textile industry in Bombay City was at once apparent and the Government of Bombay, emboldened by this success, were most anxious to try out the principle of conciliation in industries other than the textile and to bring about settlements which would make for industrial peace of a more enduring character. With this object in view, the Bombay Government instructed their Commissioner of Labour (who is also ex-officio Chief Conciliator under the Bombay Trade Disputes Conciliation Act) to attempt conciliation in cases where he thought that Government intervention would be of value. In accordance with these instructions, the Commissioner of Labour offered his services as conciliator to the Western India Match Company during a dispute which occurred during January 1935 between the company and its workmen at their Ambernath factory over questions connected mainly with reductions in wages. Mr. J. F. Gennings, Commissioner of Labour, and Mr. S. R. Deshpande, Assistant Commissioner, were able to secure an agreement between the two parties on the basis of which work was resumed after a strike lasting for a month. Subsequent to restarting work there was a further disagreement between the employers and workers on the figures of production on which the new piece work prices were to be based and these were referred by both parties to the Commissioner of Labour for his arbitration. On this occasion, Mr. N. A. Mehrban, Assistant Commissioner of Labour, in the absence of Mr. Deshpande who was on leave, paid several visits to Ambernath in order to examine the various processes of work, to ascertain figures of average production and efficiency for different groups of piece rate workers and to discuss the various questions involved with the management on the spot. Mr. Gennings held frequent meetings with the management in Bombay and after nearly two months work, he gave a comprehensive award which was accepted by both parties. Although many of the more important disputes in the cotton textile industry in Ahmedabad have been settled on the basis of awards given by umpires, the Ambernath settlement was the first occasion in India on which a Government official was appointed an arbitrator in an industrial dispute and whose award was accepted by both the parties to a dispute. This has been dealt with at some length because the Ambernath settlement marks a development of the greatest possible importance in the field of industrial conciliation and arbitration in India. After this first success, the officials of the Labour Office have successfully intervened in several other disputes and have been able to secure agreements acceptable to both sides.

MR. R. R. BAKHALE'S SHOPS BILL.

At the summer session of the Bombay Legislative Council held at Poona in July 1935 Mr. R. R. Bakhale introduced a Bill to prohibit the employment of children and to limit the hours of work of young persons in shops and to provide for their early closing. A motion for the circulation of the Bill for opinion was adopted; but, the Government of Bombay while not opposing the first reading were of opinion that it was essential to be in possession

of definite information relating to the conditions of work and wages of shop employees before they could formulate any views on the subject. Government therefore instructed the Commissioner of Labour to conduct an enquiry and submit a report for the information of Government and the Legislative Council. The report of this enquiry which covers the hours of work, wages and conditions of employment in the retail trade of some towns of the Bombay Presidency was published in February 1936 and it is the first of its kind in India. Mr. Bakhale's Bill came up again in the Bombay Legislative Council on the 20th March on a motion for the reference of the Bill to a Select Committee but this motion was lost by 38 votes to 30 owing mainly to the opposition of Government who felt that the difficulties in connection with the administration of such a measure were for the present insurmountable. Government were also of the opinion that the legislature which would shortly be elected under the new reforms should have an opportunity of deciding whether such a measure as was proposed by Mr. Bakhale should be adopted or not.

THE PAYMENT OF WAGES ACT.

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the central legislature early this year. This Act owes its origin to Mr. N. M. Joshi who more than ten years ago, moved a resolution in the Legislative Assembly for legislation in India on the lines of the British Truck Acts. The Government of India, at the time, promised to undertake an investigation into the subject and they accordingly asked all local Governments for their opinions in the matter. The Government of Bombay felt that they were not in a position to offer any views without complete information on the extent of the deductions which are made from wages in respect of fines and other matters and they therefore instituted a Presidency-wide enquiry into the matter. All factories, industrial establishments, hotels, shops, offices, etc., were covered and the report of the enquiry was published in April 1926. The results showed that abuses of a sufficiently wide character as to justify legislation for their control were prevalent. Of all the provincial Governments in India, the Government of Bombay alone were in favour of legislation on the subject and the Government of India were considering whether that province alone should be asked to undertake such legislation. In the meanwhile, the Royal Commission on Indian Labour was appointed and the Government of India decided to await their recommendations in the matter. The Royal Commission recommended all-India legislation and the Government of India drew up a draft Bill in 1932 and this was introduced in the Legislative Assembly on the 1st February 1933. A motion for the circulation of the Bill was passed on the 14th February and the Bill was then referred to all local Governments for opinion after consultation with the interests concerned. A motion for the reference of the Bill to a Select Committee was tabled for the Delhi session of 1934 but was not reached and the Bill lapsed. The Government of India took this opportunity of revising the original Bill throughout in the light of the criticisms which

had been received and a new Bill was introduced in the Legislative Assembly on the 13th February 1935. A motion for the reference of the Bill to a Select Committee was adopted on the 18th February. The Select Committee met at Simla from the 27th May to the 1st June and Mr. N. A. Mehriab, Assistant Commissioner of Labour of the Government of Bombay, was invited by the Government of India to attend its meetings as an Expert Adviser. The Select Committee's report together with the Bill as amended by them was published in the *Gazette of India* for the 16th February 1935.

It is not necessary for the purposes of this note to describe the contents of the Government of India's original and revised Bills and the amplifications made in the revised Bill by the Select Committee. All the different drafts dealt with two main principles: (1) prompter payments of wages; and (2) control of the deductions which an employer may make from the wages of his workmen in respect of fines and services. The main differences between the three drafts related to (a) the scope of the proposed measure, (b) the types and extent of the permissible deductions, (c) definition of the term "wages", and (d) the periods during which wages should be paid after they fall due. The original Bill permitted employers to make deductions from wages in respect of the value of material damaged in the process of manufacture and which was handed over to the worker concerned. The practice of handing over damaged material to the worker and of deducting its cost from his wages is widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them. The Labour Office of the Government of Bombay made an elaborate enquiry into this matter in 1933 and the Government of India acting on a report on the subject submitted to them by the Bombay Government decided to disallow this type of deductions in the revised Bill. Another practice which is widely prevalent in several industries is to grant good attendance and efficiency bonuses in addition to rates. Bonuses offer a wide loophole to employers to evade limitations in respect of fines because if the granting of bonuses were permitted there would be nothing to prevent an employer from setting apart substantial portions of wages as bonuses to be paid conditionally on certain standards of conduct, attendance and efficiency being attained. If a workman failed to attain the specified standards, he would lose the bonus or in other words he would be fined to that extent. It was necessary, therefore, for the Government of India to so amplify the definition of the term "wages" as to cover all bonuses. Textile mills in Sholapur follow a practice of granting a certain quantity of grain every month to such of their workers as do not remain absent for more than four days in a month and of deducting Rs. 2 (or more depending on varying quantities of grain supplied) from their wages. The system was introduced during a period of high prices which were prevalent in 1919-20 and was intended to meet a demand for increases in wages. The value of the grain allowance varies with fluctuations in

prices and puts a part of the wage on the basis of a sliding scale. As such it is not objectionable but workers who fail to put in the required period of attendance are deprived of this allowance and the loss which accrues to them acts as a fine. In principle the whole system is bad and savours very much of the old 'Tommy shops' in England which the earlier Truck Acts were intended to kill. The Select Committee accepted this argument and inserted a new provision in the Bill requiring that all wages should be paid in currency notes and/or coin of the realm.

When the Bill came up for second reading in the Legislative Assembly in February 1936, Sir Homi P. Mody, K.B.E., the representative of the Millowners' Association, Bombay, moved an amendment by the virtue of which an employer would be permitted to deduct thirteen days' wages from the due wages of such persons as acting in concert of ten or more remained absent from work without giving due notice. This amendment was intended to prevent lightning strikes and it introduced an entirely new principle into the Bill. As such it was strongly opposed by Mr. N. M. Joshi, the representative of Indian labour, and other labour members in the House. The Legislative Assembly however, passed Sir Homi Mody's amendment but when the Bill as passed by the Legislative Assembly went to the Council of State that body amended this clause by permitting a deduction of only eight days' wages on this account. The Act was finally passed on the 18th April 1936 and it is thought that it will be brought into operation with effect from the 1st January 1937. The more important provisions of the Payment of Wages Act are as follows:—

(a) *Scope of Application.*—The Act will in the first instance, apply to factories and railways but local Governments are empowered to extend it to tramway or motor omnibus services; docks, wharves or jetties; inland steamer vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(b) *Wages.*—'Wages' have been defined to include bonuses and any sums payable to an employed person by reason of the termination of his employment (e.g., notice pay) but will not include travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

(c) *Wage Periods.*—No wage period shall exceed one month. (Amendments moved by labour members to reduce this to a week and a fortnight were defeated), and all wages are required to be paid in coin and/or currency notes.

(d) *Time of Payment.*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is

terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(e) *Permissible Deductions.*—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over payments of wages, for incometax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a local Government may, by general or special order, authorise.

(f) *Fines.*—No fines are to be imposed on children, i.e., persons below the age of fifteen years. No fines may be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the local Government or of an authority which a local Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period shall not exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Local Governments have been empowered to make rules in connection with most of these matters.

(g) *Deductions for Absence from Duty.*—Deductions from wages for period of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (i.e., if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7); provided that "subject to any rules made in this behalf by the local Government if ten or more

employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or implicitly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice."

(h) *Deductions for Recovery of Advances.*—Recovery of an advance of money given before employment began shall be made from the first payment of wages in respect of a complete wage period, but no recovery shall be made on such advances given for travelling expenses; and recovery of advances of wages not already earned shall be subject to rules to be made by so local Governments.

(i) *Contracting-Out.*—No contracting-out is permitted.

(j) *Procedure.*—Local Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences against the Act.

(k) *Administration.*—Inspectors of factories are to be responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to local Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

This concludes our historical survey of the growth of the Labour Problem in India. In this survey factory legislation and legislation in connection with payment of wages has been dealt with as exhaustively as space permitted. We now proceed to deal more briefly with other important phases connected with labour in India.

INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief industrial countries of the world. As such she is entitled to a permanent seat on the Governing Body of the International Labour Organisation. In the memorandum prepared by the India Office of the British Government for the substantiation of India's claims as such the following figures were given to illustrate the industrial importance of the country:—

"Twenty-eight million agricultural workers excluding peasant proprietors; 141,000 maritime workers, lascars, etc., a figure second only to that of the United Kingdom; over twenty million workers in industry, including cottage industries, mines and transport; railway mileage in excess of that in every country in the world except the United States of America."

The figures for the 1931 population census show that the number of agricultural workers has increased to nearly thirty-one and a half millions. This figure excludes cultivating owners (27 millions), cultivating tenants (34 millions), landlords (over three millions) and 'others' (six and a half millions). The number of earners plus working dependants in industry, trade, transport and mines amounts to twenty-six millions. Domestic servants number eleven millions. These figures, at the best, must be considered as estimates, because even to-day no reliable statistics are available in India to show approximately correct figures of the numbers employed in each branch of industry in India. The statistics contained in the annual Administration reports for factories and mines show the numbers of persons employed in factories and mines which are subject to the

control of the Factories and Mines Acts. As far as factories are concerned, it is known that there are thousands of small factories in India which are not subject to any control and no statistics are therefore available to show the numbers employed in such concerns. All that the annual factory statistics show are the numbers of factories which are controlled by the Indian Factories Act in any particular year and the numbers employed in such factories.

With each expansion in the definition of the term 'factory' more existing factories come under control and are therefore included in the statistics but such expansions only occurred in the years immediately following the passing of the 1891, 1911 and 1922 Acts. Subject to these provisos, the following figures show the growth of the factory population in India during the last forty years.

Factory Statistics, 1894-1934.

Year.	Number of factories.	Average daily number employed.			
		Men.	Women.	Children.	Total.
1894 ..	815	275,806	53,127	20,877	349,810
1898 ..	1,098	334,594	60,603	27,532	422,729
1902 ..	1,533	424,375	85,882	31,377	541,634
1906 ..	1,855	546,693	102,796	41,223	690,712
1910 ..	2,359	624,945	115,540	52,026	792,511
1914 ..	2,936	746,773	144,157	60,043	950,973
1918 ..	3,436	897,469	161,343	64,110	1,122,922
1922 ..	5,144	1,086,457	206,887	67,628	1,361,002
1926 ..	7,251	1,208,628	249,669	60,094	1,518,391
1930 ..	8,148	1,235,425	254,905	37,972	1,528,302
1934 ..	8,658	1,248,009	220,860	18,362	1,487,231

Several interesting deductions can be drawn from the figures given in the above table. The most striking feature of these figures is that although the total number of factories rose by more than 500 between 1930 and 1934, the total of the average daily number employed in all factories during the same period fell by over forty thousand. This is due partly to the introduction of rational or more efficient methods of work. The average daily number of children employed in factories shows a steady fall since 1922. This is due to stricter administration and

better inspection and certification after the passing of the Amending Act of 1922. As against 67,628 children employed in 5,144 factories in that year, the number employed in 8,658 factories in 1934 fell to 18,362. It is noteworthy that the Millowners' Association, Bombay, reached a decision in 1922 that no children should be employed in any textile mill in Bombay City after that year. The following table gives the detailed factory statistics for the year 1934 by provinces and age and sex groups.

Detailed Factory Statistics for 1934.

Province.	Number of factories.	Average daily number of persons employed.			
		Men.	Women.	Children.	Total.
Madras	1,553	103,272	37,195	6,312	146,779
Bombay	1,678	307,743	65,943	2,147	375,833

The annual all-India reports give detailed figures of numbers employed, by age and sex groups, only for cotton spinning and weaving mills and for jute mills and not for the other industries. It is not possible, therefore, to give a table similar to the one above by industries. It is interesting, however, to observe that of the total numbers employed as given in the above table, 321,381 men, 56,734 women and 6,950 children were employed in cotton mills and 224,056 men, 38,648 women and 1,035 children were employed in jute mills. Out of the total number of 385,065 persons employed in all cotton mills in India, 245,900 or nearly 65 per cent. were employed in cotton mills in the Bombay Presidency and out of a total number of 263,739, persons employed in all jute mills in India,

251,741 or over 95 per cent. were employed in jute mills in Bengal. The next most important factory industry is that of "engineering." This group covers engineering concerns proper, railway workshops, dockyards, metal ware factories, fine woodwork factories and saw mills, etc., and it covers between 25 to 30 per cent. of the total number employed in all factories.

MINING STATISTICS.

The collection of full statistics with regard to the number of persons employed in mines in India dates from 1924, that is to say, after the passing of the Indian Mines Act, 1923. The following table contains the statistics for the period 1924-1934 :—

Mining Statistics, 1924-1934.

Year.	Total number of mines which came under the Act.	Number of persons employed.		
		Underground and open workings.	Above ground.	Total.
1924 ..	1,804	167,779	90,498	258,277
1925 ..	2,011	168,554	84,303	253,857
1926 ..	1,897	189,371	70,742	260,113
1927 ..	1,992	196,341	72,949	269,290
1928 ..	1,948	197,398	70,273	267,671
1929 ..	1,732	199,908	69,783	269,701
1930 ..	1,069	191,915	69,752	261,667
1931 ..	1,471	170,638	60,144	230,782
1932 ..	1,281	151,924	52,734	204,658
1933 ..	1,424	153,942	52,505	206,507
1934 ..	1,075	170,820	58,561	229,381

MIGRATION.

The principal occupation of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high it is generally in the small units. Thus, Delhi has 41 per cent. of immigrants and Ajmere-Merwara 19 per cent. while Ajmere City itself has as many immigrants as natives. Immigration influences the population of India very little. The 1931 Census shows only 730,562 persons as born outside the country as against 603,526 in 1921. The total emigration from the country is estimated at a million during the decade 1921-1931. The most important inter-provincial streams of migration are those between Assam and the other provinces in India, particularly Madras and Bihar and Orissa. At the last Census, Assam showed a net gain of nearly a million and a quarter due largely to the influx of immigrant labour on plantations. The greatest loss was shown by Bihar and Orissa which suffered to the extent of 1,291,567 persons. As between British India and the Native States, the tendency prior to 1921 was for migration into British India but the position during the decade 1921-1931 was reversed. The most striking example of this in 1931 was Bikaner State which showed a net gain of 161,303.

Internal migration is of six kinds: (1) *casual* involving minor movements between neighbouring villages; (2) *temporary* due to demands for labour on canals, railway construction, public works, etc. and to pilgrimages and fairs; (3) *periodic* caused by recurring seasonal demands; (4) *semi-permanent* where persons who, although maintaining constant contact with their homes seek employment in industry; (5) *permanent* where migrants leave one place

for another for good; and (6) *daily necessitated* by bazaars and employment at a walking distance from home. The Punjab and Delhi furnish the best examples of casual migration. Periodic migration is particularly heavy at harvest time and also at the changes of the seasons when traders, herdsmen, graziers and labourers from Kabul, Baluchistan, Kashmir and the hills move down to the plains during winter.

As far as labour is concerned, the greatest fluidity is to be found in Assam and the greatest immobility in Bihar and Orissa where 959 out of every 1,000 persons in the province in 1931 were born therein. The emigration of labour from Madras is mainly overseas particularly to Malaya but recruiting of Indian labour for Malaya was stopped in 1930. None-the-less considerably over half a million Indians were found in that country in 1931. As far as the main industrial cities are concerned, Bombay draws the bulk of its labour from Ratnagiri and the Konkan; Calcutta draws an appreciable part from Bihar and Orissa and the greater part of the *pardeshi* labour in the Ahmedabad cotton mills comes from the United Provinces.

METHODS OF RECRUITMENT.

One of the most difficult problems connected with industrial labour in India is the method followed for its recruitment. Minor variations in the method may be found as between industry and industry but the cardinal principle is the same in all industries, and that is, recruitment through the medium of a recruiting agent, a *sardar*, a *mukaddam* or a jobber. In the first introductory paragraphs of this note several references were made to the agricultural character and outlook of the workpeople employed in Indian industries, to their ignorance and il-

literacy and to their inherent attachment to their village homes and life. Reference was also made to the want of a stable labour force in industrial towns in India. Over and above all this, the Indian industrial labourer is, inherently, extremely conservative. Poverty and indebtedness may force him from his village to look for work but they will not force him to accept any work that may be offering among entire strangers. It will therefore be found that almost all industrial units in India are manned by groups of workpeople from the same or surrounding villages—by groups who know all the others in the group and who they feel will look after them in the event of any trouble or serious illness. A first exodus from a village is seldom a solitary one. It is almost invariably in bands collected by recruiting agents or jobbers—old hands who have a degree of intelligence above that of their fellows and who know all the tricks of the game. In most cases the agent or jobber is armed by his employer with sufficient funds to give advances to a recruit in order to help him to clear a pressing debt or to buy a recruit from his family by helping it with small funds for ceremonial expenditure. In some cases the recruiting agent launches on this expenditure himself in the hope that the recurring payments which he will receive from the recruit whom he succeeds in placing in employment will double or treble his original outlay.

The methods by which the jobber or recruiting agent is remunerated by the employer vary. It is reported that in the Central Provinces labourers are purchased from private contractors at so much per head. In Bengal the recruiting agent receives a lump sum payment from which he pays his men and retains the balance himself. In the textile mills in the Bombay Presidency the jobbers receive fixed salaries. Recruitment through contractors is most prevalent in Burma owing to the scarcity of labour in that province.

The method of recruitment which has just been described is not bad in itself. In many cases it appears to be the only way which an employer can adopt. The trouble with it, however, is the abuses with which it is wrapped up. One can understand a jobber holding a considerable controlling influence over the men whom he recruits, and one can also forgive him for accepting occasional gifts in cash as tokens of gratitude from the men whom he has placed in employment, but the matter does not rest here. The jobber is known to be an exceedingly corrupt creature who not only bleeds the persons whom he recruits by demanding from them recurring cash payments from every wage, but who also wields a considerable influence over his employer by threatening to withhold his labour in the event of his not receiving satisfaction. In Ahmedabad, a system is common whereby a jobber takes over a number of looms in a mill, mans them with men whom he feeds and houses, and himself collects all their piece rate earnings less the value of the material damaged in the process of manufacture which is handed over to him. The jobber has his own tent shops in the city for the sale of the damaged cloth and it is estimated that in several such cases his income amounts to many hundreds of rupees per month.

The system of recruitment followed in the case of the better paid and the more skilled jobs—especially in the engineering industry and on railways—is different. Here also, recommendation by a foreman or a headman is an important factor but in most cases the recruitment is direct because the type of man required is generally available on the spot. On railways, a contract for a period of apprenticeship is almost always entered into. The terms of these contracts vary according to the types of apprenticeship. The periods of apprenticeship vary from two to five years according to the jobs for which the apprentices are trained.

As far as recruitment of the ordinary unskilled worker is concerned, the rapid industrialisation of many towns is creating a nucleus of permanent town dwellers and such of these as are out of employment have got into the habit of invading mill and factory gates in the mornings in the hope of securing substitute employment or of getting into a permanent vacancy. This labour is somewhat independent of the jobber but not entirely because they must keep in his good graces in order to continue in the employment which they have secured.

Existing methods of recruitment in Indian industries have received general condemnation on all sides and the Royal Commission on Indian Labour have devoted much space in their report to this question. For the guidance of employers, the Commission made the following recommendations:—

(a) Jobbers should be excluded from the engagement and dismissal of labour;

(b) Whenever the scale of a factory permits it a labour officer should be appointed directly under the general manager. His main functions should be in regard to engagements, dismissal and discharge;

(c) Where it is not possible to appoint a whole time labour officer, the manager or some responsible officer should retain complete control over engagements and dismissals;

(d) Employers' associations in co-operation with trade unions should adopt a common policy to stamp out bribery;

(e) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision;

(f) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to resume their old work. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

In pursuance of the Royal Commission's recommendations in the matter, several large organisations in India have appointed special labour officers to recruit and to look after the welfare of the labour force and from such reports as are available it is gathered that the system wherever introduced has been an unqualified success. It may therefore be anticipated that appointments of labour officers will be more widely resorted to in the near future. The Bombay Millowners' Association, in anticipation of the Commission's recommendations in the matter instructed their affiliated mills in January 1930 to introduce

wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. They also recommended the introduction of a system of granting discharge certificates to contain a complete record of a worker's service and to demand the production of such certificates before engaging new men. It is understood, however, that little action has been taken on these recommendations, but Messrs. E. D. Sassoon and Company, Limited, in 1933, introduced a system of declassification in connection with their substitute labour for the eleven mills which they control in Bombay City. Each mill makes a monthly estimate of the number of temporary men which it is likely to engage during the month and issues employment cards to the required number. These men present themselves at the gates of their respective mills every morning and substitutes are engaged only from such men as have had these employment cards issued to them.

RECRUITMENT OF PLANTATION LABOUR FOR ASSAM.

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. Owing to altering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1908, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the provincial Governments in 1923-28 and by the Royal Commission on Indian Labour in 1929-30. The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the local Government; (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals; (c) that the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately; (d) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other provinces; (e) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the ground of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (f) that in

the event of the recrudescence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruiters. The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act which was passed in September 1932 and brought into effect from the 1st April 1933.

THE TEA DISTRICTS EMIGRANT LABOUR ACT, 1932.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV). Employers are prevented from recruiting otherwise than by means of certificated *garden-sirdars* or licensed recruiters. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15). Section 3 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrant Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Governor-General may determine for each year of levy. The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

Statistics and information with regard to the number of emigrants, conditions of life, health and work and wages of labourers working on tea plantations in Assam are contained in the Annual Administration Reports on the working of the Assam Labour Board until 1933 and of the Controller of Emigrants after 1934.

LABOUR IN INDIAN MINES AND THE MINES ACTS.

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Act of 1935. The Act of 1923 which came into force

from the 1st July 1924 replaced the earlier enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was first remedied by the 1923 Act, section 23 of which prescribed maximum limits of 54 hours per week for underground and 60 hours per week for aboveground workers. No limits were prescribed for daily hours. As some mining managements preferred to have longer week ends off and others to work their mines by shifts, the maximum weekly hours were crowded into as few days as possible and excessive daily hours continued to be worked. There were consequently insistent demands from the representatives of the miners for the fixation of a daily limit and the Government of India therefore introduced a Bill in the Legislative Assembly in March 1927 to fix a maximum limit of daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight-hour day and this was also the opinion of a minority of the Select Committee appointed to examine the Bill. The majority of the Committee, however, adhered to the principle of a twelve-hour shift as proposed in the Bill but agreed that an eight-hour shift should be gradually worked up to and they recommended a re-examination of the whole question after the new provisions had been in operation for a period of three years. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 which was brought into effect from 1st April 1930.

The Royal Commission on Indian Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated an 8-hour day while the majority favoured a 12-hour day but they suggested that weekly hours aboveground should be reduced to 54. In the meanwhile, the Fifteenth Session of the International Labour Conference adopted a Draft Convention concerning hours of work in coal mines, framed solely with reference to conditions in European countries, and this Convention prescribed that the hours of work should be limited to 7½ per day in underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The Convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 22nd March 1932 and resolutions were adopted by both chambers to the effect that Government should re-examine the whole position. The Government of India accordingly referred the matter to all local Governments and on receipt of their replies introduced a Bill in the Legislative Assembly on the 22nd January 1935 for a further limitation in mining hours. It was passed in the same session and was brought into effect from the 1st October 1935. The main provisions of the 1935 Amending Act are as follows:—

(a) No person is to be employed in a mine for more than six days in any one week.

(b) No person employed aboveground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than eleven hours.

(c) The periods of work of a person employed belowground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(d) The employment in any mine of children under fifteen years of age is prohibited.

(e) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

PROHIBITION OF THE EMPLOYMENT OF WOMEN IN MINES.

The Government of India promulgated regulations under section 29(f) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1929 and in all other mines with effect from the 1st July 1929. As the summary exclusion of women in the main coal fields would have resulted in a very serious dislocation in the industry, a principle of gradualness was laid down and it was prescribed that in mines in certain provinces women may still be employed underground up to 1939 provided that the total number of women so employed at any time in any mine does not exceed a gradually decreasing percentage of the total number of both men and women employed underground. The annual decrease was to be 3 per cent. in coal and 4 per cent. in salt mines. The number of females employed underground in mines since 1929 have been as follows:

1929-24, 089;	1930-18, 684;	1931-16, 841;
1932-14, 711;	1933-12, 799;	and 1934-11, 193.

HOURS OF WORK AND CONDITIONS OF EMPLOYMENT.

If one is asked what is the most remarkable feature in Indian industry the unhesitating answer would be, 'the existence of a bewildering variety of conditions of work and employment.' These vary widely not only between industry

and industry and centre and centre but also between unit and unit in the same industry and in the same centre. One would imagine that it should be possible to find some standardisation of conditions in units which are under

the same administration such as in Government railways which are under the control of the Railway Board; or, in concerns of a type which are affiliated to a large and influential association such as in textile mills which are members of the Millowners' Association, Bombay. If a similarity of conditions is to be found in two or more units this would be due more to coincidence than to intention. The assertion of individuality and a strong dislike of change are the keynotes to the proper understanding of the lack of standardisation in industrial conditions in India, and old customs die hard. To attempt an adequate description of conditions of work and employment under the thirty odd heads into which this chapter is divided for each of the scores of industries which exist in India would require space greater than that given to all the subjects which have been dealt with in this volume. The situation is further complicated by the fact that conditions vary widely between organised and unorganised concerns and also as between concerns conducted on the one hand by Government, local and public bodies and on the other by private individuals and companies. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as the latter is concerned, we may at once state that the report of the Royal Commission on Indian Labour and the various appendices to that report containing the oral and written evidence of the Government of India, the Railway Board, the various provincial Governments and other bodies and persons contain a great deal of information on a host of subjects. The descriptions of the conditions existent in 1928-29 which are contained in this report are, however, somewhat out of date. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries annually compiled by the Government of India on the basis of these reports give valuable information on hours of work, etc. Information on conditions in Indian mines is contained in the annual all-India mines administration reports. The last word on almost all phases of conditions of work and employment is, however, contained in the series of admirable reports published by the Government of Bombay in connection with the General Wage Census conducted by the Bombay Labour Office in all the perennial factories of the Bombay Presidency in 1934. It is true that these reports are of a somewhat limited character in so far as territory is concerned, but owing to the existence of innumerable variations, the reports are fully indicative of conditions in the whole of India. At the moment of writing, two reports covering the engineering and printing industries have been published but it is expected that the remaining reports for all other industries will be available before the next edition of the *Indian Year Book* is ready for publication.

HOURS OF WORK.

The existing restrictions in hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described

in the sections dealing with those Acts. Speaking broadly, hours in perennial factories are limited to 10 per day and 54 per week and in seasonal factories to 11 per day and 60 per week. The cotton textile industry in almost all centres works a uniform 9 hour day except in a few concerns which work a 9½ or 10 hour day from Mondays to Fridays and a 5½ hours or 4 hour day on Saturdays. In the jute industry, an agreement which had been reached between the Jute Mills' Association and outside mills to work a uniform 40 hour week in order to restrict production came to an end on the 31st March 1936. All jute mills were to be free to work a 54 hour week as from the 1st April 1936 but at the moment of writing it is understood that the majority of the mills work a 45 hour week on the basis of a uniform 9 hours day for five days in the week. All the dockyards, many of the larger engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in most of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills. Almost all seasonal factories work a uniform 10 hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible, to close on the local bazaar day. The daily hours of work underground in mines average nine per day for six days in the week. In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, work is arranged on a system of three shifts—the different shifts changing over every week or fortnight. The change-over is so arranged that every workman gets a rest period of at least twenty-four continuous hours once in one week.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of eight hours each. In the smaller sheds where work is of a fairly intermittent character, systems of two shifts of twelve hours each obtain. As far as the hours of work of other classes or Railway servants are concerned, the Indian Railways Act, 1890, was so amended in 1929 as to empower the Governor-General in Council to make rules for the limitation of hours of work of and of grants of periodical rests to certain classes of railway servants. Under the new powers, the Railway Servants Hours of Employment Rules, 1931, were promulgated and put into effect. These provide a 60-hour week for persons engaged in continuous work and an 84-hour week for employees whose work is of an essentially intermittent character. Persons in positions of supervision and management or who are already subject to the limitations imposed by other Acts such as in railway workshops, running

staffs and watchmen; watermen, sweepers and gatekeepers whose work is both intermittent and of a specially light character are excluded from the operation of the rules.

There is at present no legal restriction on the hours of work of dock labourers in India and the Royal Commission who examined the question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 33½ per cent. over ordinary rates. On circulation of these proposals by the Government of India, most provincial Governments were of opinion that under the existing organisation of dock labour in India legislation for the control of hours was not practicable owing to the insurmountable difficulties which would be experienced in enforcement. The authority of the Karachi Port were thereupon advised to try out an improvised method of decasualisation which would involve registration of all dock workers. The present hours of work of stevedore labour vary between nine to twelve per day.

As far as the industries not specifically dealt with here are concerned, the hours of work in the case of certain individual units may, by the standards of to-day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in India has had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non-regulated industries and concerns.

HOLIDAYS WITH PAY.

The question of allowing industrial workers the right of having annual holidays with pay has recently become of international interest owing to the nineteenth session of the International Labour Conference held in June 1935 having decided to place the subject on the agenda of the twentieth session for a second and final discussion. In India, holidays with pay are enjoyed only by a very small percentage of the population; but, owing to the preponderance, in numbers employed, of the workmen in Government and railway factories and in the factories owned by public and local bodies and public utility companies, the engineering industry in India easily outstrips all other industries in the leave with pay privileges which are enjoyed by its workers. The leave rules of different administrations vary widely, and different sets of rules are adopted not only for different classes of employees of the same administration but also for the same or similar types of employees, according to the dates when they first joined service.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay—in the case of the concerns under the Government of India, according to the Fundamental Rules; and for the factories owned and controlled by the local Governments according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of monthly and piece-rated workers are governed by special orders suited to each case. The leave rules which were in operation up to a few years ago

have, in many provinces, been regarded as too liberal and for new entrants substantial changes have been made with the result that different systems are in operation for different classes of Government employees according to the dates when they first joined service. Leave with pay to permanent monthly rated industrial employees of Government is granted in terms of ordinary earned leave on average pay or double the period on half average pay, 'not due' leave on half average pay and casual leave. All leave other than on medical certificate must be 'earned', and the maximum period of continuous leave that may be enjoyed at any one time is limited, in the case of ordinary leave on average pay up to four months according to the date on which a Government employee first joined service; and, in the case of leave on medical certificate, up to eight months. Casual leave is intended to meet cases of short absences from duty. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is more than one month for every eleven months of duty plus ten to twenty days casual leave in every calendar year. To cite an example of special leave rules for certain categories, reference may be made to daily rated workmen and piece workers in all ordnance and clothing factories of the Army Department of the Government of India who since 1931 get 10, 15 or 20 days leave with pay every year according to whether they have put in three to ten, ten to twenty or over twenty years' service.

The leave rules for railway workshopmen who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first engaged. As far as the workmen who joined after 1st September 1928 are concerned, all railway systems appear to have accepted the principle of a standardisation of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal. One big company-owned railway grants fifteen days casual leave in a calendar year plus Empire Day and King's Birthday or any 17 paid holidays in addition to the above privileges to all workshop employees irrespective of a qualifying minimum period of service.

The information collected on the question of leave with pay by the Government of Bombay for the purposes of its General Wage Census in perennial factories in the Bombay Presidency showed that out of 221 engineering concerns in the Presidency, 72 employing 28,502 workers or nearly 60 per cent. of the total number employed grant leave with pay to most of their workers and that another 16 employing 6,800 workers or 14.09 per cent. employed in the industry grant leave with pay to certain categories only.

In cotton textile and jute mills certain categories of workmen on the mechanical and subordinate supervisory establishments are granted varying periods of leave in minimum units. Leave with pay to workmen is granted by a few large corporations such as the Burma Shell Corporation, General Motors (India), Ltd., and the Tata Hydro

Electric and Power Companies, etc. Taking all Indian industrial workers as a whole, it would perhaps not be incorrect to say that barely ten per cent. enjoy leave with pay privileges.

PRINCIPLES OF WAGE FIXATION.

Wage rates in the industrial countries of the West are mostly based upon union rates—accepted both by employers and employees—trade agreements, awards by arbitration or conciliation boards or, in countries which have Trade Boards Acts for the fixation of wages in unorganised industries where association of workmen is weak, upon the decisions of Trade Boards. In India, none of these methods of wage fixation obtain and the employer is more or less free to fix any wages which he likes or, at the most, to bargain with his prospective workman. The labour costs in all Government and railway concerns and in the establishments run by local or public bodies, however, have to be accurately budgeted for and in such concerns wage rates are fixed. Each occupation is divided into a number of grades or classes and the number of posts in each grade is fixed; but the basis of grading varies widely between the different administrations. Promotion from a lower grade to a higher usually depends both upon merit and the passing of trade tests and is not automatic. The rates for the different grades are determined by "professional officers" as in the case of His Majesty's Indian Naval Dockyard or on information published by Government departments of industries and labour. In privately owned concerns, the governing factors in wage fixation are the demand for and the supply of the type of labour required, personal efficiency and current rates in the locality where a concern is situated but once a worker's rate has been determined, it is not varied unless a general increase or cut is applied to a whole establishment or a department of the establishment.

TYPES OF RATES AND ALLOWANCES.

Wage rates in the West are generally either consolidated hourly time rates or piece rates and the calculation of earnings from such rates is both simple and easy. Some progress has been made in India during recent years in the direction of payment of wages on the basis of hourly rates in a few large engineering concerns but this form of payment is very rare. The most common types of payment of time rates are daily rates or monthly rates; and, in some cases, where wages are paid weekly or fortnightly, of weekly or fortnightly rates. The calculation of earnings from hourly or daily rates does not offer any difficulty except in the case of daily rates in concerns which work a short Saturday. Here, some concerns pay half the daily rate or *pro rata* the daily rate for number of hours worked or the full daily rate provided that all the days from Mondays to Fridays or the Thursday and the Friday have been put in. Calculation of earnings from monthly rates are on the other hand, so devised as, generally, to deprive the monthly paid worker of a part of his dues. Some concerns calculate earnings from monthly rates on the basis of all the days in the month and deduct pay for the weekly holiday. Others

make payment for the weekly holiday conditional on the Saturday or Monday or both having been put in. Still others pay wages for one, two or three Sundays (but not for all) on the condition that certain specified numbers of working days in the month concerned have been put in. A few calculate earnings *pro rata* the number of working days in the month. Thus a worker on Rs. 27 per month will receive Rs. 24 for 24 days work in a 27-day month. The Payment of Wages Act makes the last method obligatory on all concerns which pay on monthly rates of wages. In certain cases monthly rates are for the Hindu calendar month or a month of so many hours, as in the case of the G. I. P. Railway where monthly rates are for a month of 208 hours, or for a 'book month' of so many complete weeks.

Calculations of earnings from piece rates offer no difficulty in cases where they are based on number of articles produced but they are exceedingly complicated in cotton weaving. Some mills pay on the basis of weight, others on length. The rates vary according to reel, space and picks to an inch and are further complicated by allowances for different types of borders and dobby designs. Certain units, especially in the printing industry have task rates which are a combination of time and piece rates. Certain engineering concerns in India have introduced the Halsey Weir or the Bedaux point systems of payment.

Allowances.—The textile industry in the Bombay Presidency still adheres to the principle of granting war or dearness allowances over basic rates prevalent in some year between 1914 and 1918. Up to 1933, all mills in Bombay City paid a *moghwaree* or dearness allowance of 80 per cent. for weavers and of 70 per cent. for time workers, spinners and women. In that year the Millowners' Association, Bombay, permitted its affiliated members to take independent action in the matter of wage reductions. Certain mills reduced basic rates, others reduced the allowances and still others effected reductions in both basic rates and allowances. Although up to 1933 the rates of allowances were universal, basic rates varied widely between mill and mill. To-day, both basic rates and allowances vary although the Association has made an attempt to standardise basic time rates in unorganised occupations. The allowances in textile mills in the Bombay Presidency outside Bombay City vary both between centre and centre and occupation and occupation. The tendency in industries outside the textile has been towards consolidation but certain railway systems grant grain allowances in addition to rates of pay for certain categories of employees with low rates of wages.

Bonuses.—The system of paying good attendance bonuses was widely prevalent in several industries in India up to a few years ago but it is tending to disappear during recent years. Good attendance bonuses, however, still continue to be paid almost universally in textile mills in Sholapur, and Ahmedabad and to a limited extent in textile mills in Bombay City. They take the form of cash payments of four annas to a rupee per week for attendance throughout the week. In some cases they are graduated according to the number of working days put in

In addition to the good attendance bonus paid in cash, the textile mills in Sholapur give a grain allowance of a quantity of grain at a fixed price to all workers who do not lose more than four days in the month. This allowance has already been dealt with under *The Payment of Wages Act*.

Textile mills in Ahmedabad pay an efficiency bonus of eight annas per loom per fortnight on the attainment of certain standards of efficiency. This, however, benefits the weaver very little, if at all, because in order to attain increased production he allows slips to go past unattended and for these he is either fined very heavily or is made to take over whole pieces of damaged material the value of which, at the selling price of the finished article, is deducted from his wages. Efficiency bonuses are also paid in certain other sections of industry such as in engineering and coal mining.

In addition to good attendance and efficiency bonuses, the workers in several concerns owned by large public companies are permitted to participate in the annual bonuses which are sometimes given as ex-gratia payments dependant on profits to all the employees of a company. The payment of such a bonus amounting to one month's pay to cotton mill workers in Bombay City during the years 1919 to 1923 and the disastrous general strike which followed the stoppage of this bonus in 1924 has been referred to in the first chapter of this note. Evidence is not wanting of the payment, by several concerns, of a small ex-gratia bonus at Diwali or the Hindu business New Year.

Overtime.—The term "overtime," in general parlance, is applied to all extra time put in by a worker outside his normal specified daily hours of work, and in England and many other industrial countries is remunerated at higher rates which vary according to whether the overtime was worked immediately prior to normal starting or after normal closing, during the luncheon hour, at night, on a Saturday afternoon or on a Sunday or a holiday; and often go up to more than double ordinary rates. In India, the Factories Act, 1934, requires that the overtime rate for hours in excess of the statutory weekly hours shall be a-time-and-a-quarter for hours in excess of 54 and a-time-and-a-half for hours in excess of 60. These provisions are, however, applicable only to those workers in respect of whom exemptions from the restrictive regulations have been allowed. Legally, as long as the daily or weekly statutory hours are not exceeded, an employer need pay nothing extra for overtime work outside normal hours, and in practice very few employers do so. On certain railways where monthly rates are for a month of 208 hours, all time—both ordinary and overtime—is credited to the normal hours' account and payment at overtime rates does not come into consideration until such time as the monthly hours are exceeded. Where overtime rates outside the requirements of the Act obtain, these are generally a-time-and-a-quarter the ordinary rates, but very few concerns indeed pay enhanced overtime rates for extra time beyond normal daily hours. In many cases workers are called upon to put in compensatory

time after normal hours for time lost owing to late attendance or absence and in others workers who put in overtime are asked to take compensatory time off during specified working hours on the day following that on which overtime was worked. These methods mean that the same rate is given for both normal and overtime work. In many other cases, no additional remuneration whatever is paid for overtime outside normal hours.

PAY PERIODS AND WAITING PERIODS.

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district; and within the same establishment different classes of workers are paid for different periods. If generalisations may be attempted, the jute industry in Bengal, coal mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for *hapta* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Sholapur and several other centres, engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortnightly bases in the iron and steel industry and in sugar mills and tanneries. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India, in consultation with the provincial Governments and interested persons and bodies, on three different occasions within the last ten years. Attempts were also made to amend the Payment of Wages Bill in such a way as to achieve this object. The proposals, however, fell through owing mainly to the opposition of the monthly paid workmen who appeared to prefer the system of monthly to fortnightly or weekly payments. Their argument was that if rents and bills were to be settled monthly they would be in difficulties if they had frittered away their weekly earnings.

Periods elapsing before Payment.—The 'waiting period' or the time which elapses between the end of the period for which wages are earned and the date of payment varies considerably as

between industry and industry and between establishments in the same industry. The longest delays are associated with concerns which pay wages monthly and in some cases extend to as many as 30 to 40 days following the date on which wages fall due. Some delay must be occasioned in cases where intricate calculations are necessary for ascertaining earnings from piece rates but textile mills in England pay wages for the week ending Thursday evening on the following Saturday morning and it seems unreasonable that textile mills in India should require fifteen to twenty-five days for the purpose. The chief reason for delaying payments of wages in India is, however, not due so much to difficulties of wage calculations as to ensuring employers against their workmen leaving them without giving due notice. Textile mills in Bombay pay wages on the second and in Sholapur on the third Saturday following the end of the month. The jute mills in Bengal and coal mines pay weekly wages a week after they fall due. In cotton mills in Ahmedabad *hupta* workers have to wait for ten days and monthly workers a fortnight before they are paid. All time rated workers in Government factories receive their wages on the first working day but railway workers have to wait for ten to fifteen days. The Payment of Wages Act prescribes that wages in all concerns employing 1,000 or more persons must be paid within ten days and in concerns employing less than 1,000 persons within seven days of the end of the period for which wages fall due.

SUPERANNUATION BENEFITS AND FINANCIAL AID.

The subjects which fall under this section are pensions, gratuities, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions.—All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of nine years' service has been put in. The amount of the pension due is arrived at by multiplying the average monthly pay for the three years preceding retirement by the actual period of active service less one year and dividing the product by 48. Where permanent monthly paid workers on piece rates are admitted, the average monthly pay is arrived at on the basis of the earnings for 72 months and the divisor in the above formula is 72. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although many concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right.

Gratuities.—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to non-pensionable workers who have put in not less than thirty years' service in Government concerns. In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally

accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than nine years' active service are entitled to gratuity if they are compelled to retire on medical certificate.

Provident Funds.—These are of two kinds: (1) contributory, where both the employer and the employee subscribes to them; and (2) non-contributory where the employee alone subscribes to them. Certain Government servants who by the terms of their contracts are not eligible for pensions are compulsorily required to subscribe to the contributory section of the General Government Provident Fund. In such cases both Government and the Government servant concerned subscribe one month's pay each per year to the fund. All pensionable Government servants except certain classes of industrial workers and menials have the option of subscribing to the non-contributory section of the fund, subscriptions to which vary from 12 to 30 pios to the rupee of income at the option of the subscriber. Very few industrial workers of Government, however, take advantage of this section of the fund mainly because, apart from the compound interest which his subscriptions earn, the worker does not stand to gain anything on his outlay.

In cases where large bodies of non-pensionable Government servants are brought under the operation of contributory provident fund schemes, special funds such as the State Railways Provident Fund and the Indian Ordnance Factories' Workmen's Provident Fund, which are governed by special rules, are formed. Company owned railways have schemes similar to that for State railways. Whereas it is obligatory for most categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata Electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd., and the Burma-Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen. The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money. All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own

subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

Co-operative Societies.—The co-operative movement has made very rapid progress in industrial establishments all over India during recent years, and a very fair percentage of concerns employing 500 or more workers have co-operative credit societies for their employees. Almost all railway systems in India have co-operative banks and savings banks in addition to credit societies and full information on the whole subject is available in the different annual administration reports of Registrars of Co-operative Societies in the various provinces. It is impossible to attempt even a brief summary of the movement here but a few details regarding one of the best of such societies would be of interest.

The Jackson Co-operative Bank on the B. B. & C. I. Railway is perhaps the biggest and the best managed co-operative credit society of industrial workers in India. During the year ending 30th June 1935 it had a membership of 33,557 with a share capital of Rs. 4.5 lakhs and a reserve fund amounting to Rs. 2.7 lakhs. It receives both fixed deposits and ordinary deposits in its savings bank branch; and it also issues cash certificates to all railway employees earning Rs. 125 or less per month. Fixed deposits for the year ending June 1935 amounted to Rs. 27 lakhs and savings bank deposits to Rs. 20 lakhs which, together with capital, gave the society a working fund of Rs. 51 lakhs for the year. The number of new loans issued during the year amounted to nearly 20,500 and involved a sum of Rs. 70.5 lakhs. The bank has been declaring a 10 per cent. dividend (which is the maximum payable under the Co-operative Societies Act) for the last ten years. A special feature of the activities of the Bank is a new scheme which it has recently introduced for redemption of debts. Members of the society who are in debt are encouraged to bring a complete list of their debts to the Bank which, with the assistance of the Staff Officer of the railway, interviews all creditors and arranges with them to compound the debts for much lesser sums in return for ready payment. The total amounts so paid to members' creditors are treated as loans and recovered in easy instalments spread over 72 months. The Bank also contributes an amount of Rs. 10,000 annually to a special Staff Welfare Fund started by the railway administration at the instance of the Bank "to look after the welfare of the staff in general and of low paid staffs and their families in particular." Welfare centres which have been opened at various stations on the line render help by way of supplying milk to the children of the needy, by nursing the sick and by providing hygiene clinics.

Grain and Cloth Shops.—During the period of high prices in India in 1919-22, several large industrial establishments all over the country, and particularly the cotton textile mills in Bombay City, conducted cheap grain shops for the

benefit of their work-people. In addition to supplying grain at cost price (the units concerned bore the cost of management) these shops had the advantage of offering sales on credit to be liquidated by deductions from due wages. With the fall in prices the majority of these shops disappeared and to-day a very few establishments indeed have them. Many textile mills all over the country, however, have cheap cloth shops for their workers. All types of these shops will have to cease functioning because the Payment of Wages Act prohibits employers from making deductions from pay due or receiving payments from their employees for purchases from employers' shops. This is in accordance with one of the main cardinal principles of Truck legislation.

Loans and Advances.—Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent, and give rise, in certain centres, to widespread abuses. For example, the cotton textile mills in Ahmedabad charge interest at rates varying from 30 to 150 per cent. per annum on all such advances given. The Payment of Wages Act empowers local Governments to frame rules for the regulation of these advances.

MEASURES FOR ENFORCING DISCIPLINE.

The measures adopted by industrial employers in India for enforcing discipline have engaged the earnest attention of both the Central and the Provincial Governments in this country for the last ten years. Early in 1926, the Government of India asked all local Governments to make enquiries, in their respective administrations, into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The Government of Bombay conducted an extensive enquiry into the subject in the Bombay Presidency and as a result of their investigations came to the conclusion that abuses sufficient to justify legislative action for their control were prevalent. The subject was partly examined by the Bombay Strike Enquiry Committee (Faewett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and both these bodies made a series of recommendations in the matter. The Payment of Wages Act, which has already been dealt with in an earlier section, was passed in 1936, in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of labour turnover and the high degree of absenteeism. Indian employers state that it is inherent

in the Indian workmen to make frequent changes in his employments and also to resort to frequent abstentions from work. Delayed payments of due wages, forfeitures of wages for failure to give due notice and the withholding of due wages where workers proceed on unauthorised leave are some of the devices which have been resorted to by employers to counteract the former. Various methods have been devised in order to control the latter—good attendance bonuses, fines and *double khadda* by virtue of which a workman loses two days wages for each day of absence. The withholding of due wages till next pay day has given rise to a system of *havalas* or pay order tickets which are cashed by *pedhivallas* (small bankers) at discounts of 3½ to 12½ per cent. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied; but, few, if any, employers have taken the trouble to examine the root causes for them. The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteeism in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1935 were: Ahmedabad 3.57, Bombay 7.90, and Sholapur 13.02—figures which tell their own story. Low wages and adverse conditions must necessarily tend to weak health, incapacity for sustained effort and to the growth of a desire for change in order to improve one's lot. These are problems which the new autonomous provinces in India and Indian industrial employers will have to try and remedy instead of devising methods of enforcing good attendance and continuity of employment by the infliction of monetary penalties and other forms of punishment.

The Payment of Wages Act, 1936, will not be brought into operation before some date in 1937. The period intervening between the passing and the coming into effect of the Act is to be spent in the framing, by the Local Governments, of the necessary rules for the administration of this measure. Both the main provisions of the Act and the Rules will require that all employers shall draw up conduct rules or standing orders clearly specifying the acts of commission or omission for which fines will in future be inflicted. These standing orders will have to be approved by the local Government and exhibited in the work place in a manner to be prescribed. The total amount of the fines which it will be permissible for an employer to inflict on any one workman during any wage period are not to exceed half-an-anna in the rupee of his or her wages for that wage period and no fine may be imposed unless the order inflicting the fine is in writing and the worker concerned has been given an opportunity of showing cause why the fine should

not be inflicted. All fines are to be properly recorded in registers to be prescribed and all receipts from fines are to be expended on objects beneficial to the workers employed in the establishment concerned as a whole. Children under 15 years of age are not to be fined. In view of these regulations it is obviously futile to enter upon a discussion here of the extent to which these regulations are practised in Indian industries to-day, but for the information of persons interested in these questions we might state that full information on all these matters is contained in the series of reports which have been published from time to time by the Bombay Labour Office.

INDUSTRIAL HOUSING.

Residential buildings in all countries are constructed from the point of view of investments from which their owners hope to receive a fair interest on their capital outlay. No country in the world expects its landlords to be philanthropists in the matter of providing rent-free or cheap rented housing to such of her people as cannot afford to pay the economic rents which are asked for; and although every Government must be expected to provide decent housing for its own low paid servants, the world has not yet reached that socialistic stage where Governments are expected to provide adequate housing for whole populations. At the same time, low paid wage earners in crowded and congested industrial areas can hardly be expected to be able to afford the economic rents demanded by the landlords. In such cases there can be only two alternatives: wage levels such as will permit workmen to pay such rents as are asked for or the provision of adequate housing by the employer. The first does not appear to have received much consideration at the hands of industrial employers in India. The second is a lament which has been recited by almost every Commission and Committee that has been appointed in India during the last 20 years to the point of satiation; and although several benevolent and far sighted employers have endeavoured to provide housing for their workpeople a very small percentage indeed of the total industrial population of India is housed by the employer, and the question of industrial housing continues to be one of the most vexed questions of the country.

The pioneer work in the field of industrial housing has been done by the railways which have spent nearly thirty crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The latter is a part of a gigantic scheme launched in 1920 by Lord Lloyd, then Governor of Bombay, for the construction of 625 chawls having 50,000 tenements in all. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls situated at Naigaum and Sewri and at DeLisle Road are in fair demand but the majority of the tenements at the Worli chawls continue unoccupied owing to a complaint by the workers that they are situated at considerable distances from

their places of work and that the locality offers few of the amenities of city life. The Municipalities of Calcutta, Bombay, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers. Perhaps the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mills. The idea is to establish a model village and to build houses of the bungalow type on plots measuring 36' x 53' with the limitation that building is not to be allowed on more than one-third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them. The Tatas are in the forefront of industrial employers in India in providing decent housing for as many of their workmen as possible and they have built 5,000 residential buildings in Jamshedpur for the staff and the employees of their Iron and Steel Works at that centre. All the workmen in their several electricity generating and distributing stations are also provided with adequate housing. Many of the jute mills in Bengal and cotton mills in Bombay City and other centres have provided housing for fair percentages of their total staffs but the majority of textile workers in India are not housed by their employers.

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work. These principles appear to be generally followed by private companies and concerns as well, especially by coal mine owners in Bihar and Orissa and by tea planters in Assam. All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coal fields has to be licensed and licenses are not granted unless the standards are complied with. If labourers are found in occupation of unlicensed houses the management is liable to prosecution. In Assam, all residential employees on tea estates are provided with rent-free quarters in barracks or 'lines' as they are called. These are regularly inspected by district and sub-divisional officers and every endeavour is made to maintain as high a degree of sanitation as is possible.

Conditions of industrial housing in India are the worst in Ahmedabad. A recent enquiry conducted by the Ahmedabad Textile Labour Union into industrial housing in that centre showed that out of a total of 23,706 tenements observed and studied, 5,680 had no provision of any kind for water and that 3,117 had only

a supply of some sort from wells. Those which have the advantage of a supply from municipal sources had one or two taps in an area occupied by 200 or more families. 5,000 tenements had no latrine accommodation and sanitation and drainage were conspicuously absent. The Ahmedabad Municipality has, however, awakened to a realisation of the seriousness of the situation and it has been decided to construct model dwellings on co-operative lines for industrial workers in the city. Owing to financial considerations, progress must necessarily be slow but a beginning has already been made.

Royal Commission's Recommendations.—The Royal Commission on Indian Labour have made several recommendations in connection with industrial housing. These recommendations fall under various categories: (1) Legislative action by the Central Government; (2) Administrative action by the Central Government; (3) Legislative action by Provincial Governments; (4) Administrative action by Provincial Governments; (5) Administrative action by public bodies such as municipalities, improvement trusts, etc., and (6) action by employer's and workers' organisations. The recommendations under the first head included a suggestion to amend The Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings. The Government of India introduced a Bill in the Legislative Assembly to amend the Land Acquisition Act in the manner suggested and this Bill was passed into law in 1933. The Commissions' recommendations under the second head mostly concern railways, and although the Railway Board agrees on the vital urgency of providing greater facilities for adequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency.

The Commission's recommendations with regard to legislative action by Provinces are of a very ambitious character. They include Town Planning Acts for the Bombay and the Bengal Presidencies providing for the acquisition and lay out of suitable areas for working class housing, the opening up and reconstruction of congested and insanitary areas, the "zoning" of industrial and urban areas and Government grants and loans to approved schemes. For administrative action by local Governments, the Commission recommend that they should make surveys of urban and industrial areas to ascertain their needs in regard to housing, and that they should then arrange for conferences with all interested parties in order that decisions may be taken as to practicable schemes and the methods whereby their cost should be shared. Where suitable Government land is available, Government should be prepared to sell or lease to those who agree to build houses within a specified period; and Government should announce their willingness to subsidise in this or other ways employees' housing schemes approved by them. The Commission further recommended that Government should insist that all local authorities should frame bye-laws laying down minimum standards in regard to floor and cubic space, ventilation and lighting and that the Governments themselves should

draw up regulations for water supply, drainage schemes and standards for latrines. For action by public bodies, the Commission recommend that the provision of working class housing should be a statutory obligation on every Improvement Trust and that it should be possible for Improvement Trusts to provide land, roads, sewers and sanitary conveniences for new areas but that street lighting and water mains should be a charge on municipalities. Improvement Trusts should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities. It has also been suggested that co-operative building societies and similar activities should be encouraged. In view, however, of the present acute financial stringency prevailing in all provinces, it is very doubtful whether most of the provincial Governments will be in a position to do much in the matter of the Commission's recommendations on industrial housing.

Rest Shelters, Dining Rooms and Canteens.—Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India do provide tiffin rooms and rest shelters for their workmen. Most concerns have also permitted the establishment of tea stalls on the premises but apart from this no effort has been made to run co-operative canteens on the lines of those which are associated with most of the larger factories in the West. Communal factors such as the religious prohibition of Hindus to eat their food in the company of members of other communities, want of space and the constructional layout of the majority of the smaller industrial establishments are among the reasons given by the managements who do not provide rest shelters and/or tiffin rooms for their workmen.

HEALTH.

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters. The problems associated with health are always difficult; they are much more so in a country where climate, highly insanitary housing conditions, poverty and the ignorance of the people contribute to recurring outbreaks of such deadly tropical diseases as cholera and small-pox in epidemic form. The widespread prevalence of malaria in certain congested areas of the Bengal, the Bombay and the Madras Presidencies is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets; and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface-treating small ponds and pools of stagnant water, malaria still continues to take a big toll of human life. *Beri-beri* and tuberculosis in Bihar and Orissa, *kala-azar* among the jute workers in Bengal and tuberculosis in the Punjab are some of the many diseases which are widely prevalent in certain tracts.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a somewhat nominal character. But wherever control is possible, Government have done much to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health of factory workers have been incorporated in the Indian Factories Act, 1934. These include the maintenance of cleanliness in accordance with rules to be framed by local Governments with regard to lime or colour washing, painting, deodorising and disinfecting; the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation of gas, dust and other impurities generated in the course of work; the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased; the prohibition of overcrowding by laying down the standards of cubic feet of space to be provided for each worker; the provision of suitable and sufficient lighting; the provision of adequate supplies and sources of water both for drinking and for washing; and for the maintenance of sufficient latrine accommodation separately for male and female workers.

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries, the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of local Governments but the Government of India have provided adequate medical facilities in most of their own establishments such as His Majesty's Indian Naval Dockyard and their various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trust also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter, almost all the large labour employing establishments in India—cotton and jute mills, mines, engineering workshops, tea plantations, etc.—maintain fully equipped dispensaries in charge of whole or part-time qualified medical officers.

Maternity Benefits.—A Bill introduced by Mr. N. M. Joshi in the Legislative Assembly of the Central Government in 1924 to provide for the payment of maternity benefits in certain industries was thrown out by the Assembly in August 1925, but the Governments of Bombay and the Central Provinces passed their own

Maternity Benefit Acts in 1929 and 1930. The Bombay Act was amended in 1934 in such a way as to be of greater benefit to the persons concerned. Under both Acts, all women workers employed in factories are to be compulsorily rested for three to four weeks before child birth and for four weeks after child birth and employers are required to pay them a benefit amounting to about half their usual pay during this period. The total amount of benefit paid under these Acts since their introduction up to the 21st December 1934 has amounted to 6.23 lakhs of rupees paid in 27,143 cases which works out at Rs. 23 per case. The Bombay Municipality started a maternity benefit scheme for its halakhore and scavenging women in 1928. By this scheme, the classes benefited receive a benefit of leave on full pay for a period not exceeding 42 consecutive days. In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During periods of advanced pregnancy and after child birth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at child birth is often granted in addition. This bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company and the Assam Oil Company grant six and three months' leave respectively on half pay. Several estates in the Coimbatore District of the Madras Presidency either pay hump sum bonuses in lieu of pay or feed the women concerned for a few weeks before and after confinement.

Provisions of crèches.—One of the many additional principles introduced in factory legislation in India by the Indian Factories Act of 1934 was one for the compulsory provision in all factories wherein more than fifty women workers are ordinarily employed of a suitable room for the use of children under the age of six years belonging to such women and for the supervision of the children in such rooms (or crèches) in accordance with rules to be framed by local Governments in the matter. Crèches are, however, not a new feature in Indian industry. Several textile mills in Bombay, Ahmedabad and Sholapur had provided them for over ten years and in many of these the children were looked after by qualified *dais* (Indian midwifery nurses) and were clothed and fed at the expense of the millowners. The Government of Bombay had also made provision for the adequate supervision of these crèches by the appointment of a lady Inspector of Factories as early as 1924. Crèches were also provided by several textile mills in other centres and in the factories attached to many of the larger tea plantations in Assam.

Labour Commission's Recommendations.—Among the more important recommendations made by the Royal Commission on Indian Labour in connection with the health of the industrial worker are the following:—

(a) India should have an Institute of Nutrition. (The Government of India have postponed action on this recommendation indefinitely for want of funds).

(b) Local authorities should construct sanitary markets in all urban and industrial areas.

(c) Adulteration of Foods Acts should be in force in all provinces.

(d) In industrial provinces Public Health Departments should be strengthened to deal with industrial hygiene and industrial disease.

(e) Women should be appointed to public health staffs particularly in the more industrialised provinces.

(f) Comprehensive Public Health Acts should be passed in all provinces.

(g) Where piped water supplies are not available special precautions as to purity should be taken.

(h) Every provincial health Department, every railway administration and all Boards of Health and welfare in mining areas should employ fulltime malarialogists.

(i) A Government diploma for health visitors should be instituted as the recognised qualification required of all women aspiring to such posts.

(j) In the larger industrial areas, Governments, local authorities and industrial managements should co-operate in the development of child welfare centres and women's clinics; and Government should give percentage grants for approved schemes.

(k) Maternity benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all provinces, and

(l) All methods should be explored that may lead to the alleviation of existing hardships arising from the need of provision for sickness.

INDUSTRIAL SAFETY.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But, the increase in the number of serious accidents suggests that the problem is a more serious one; and, that in spite of the statutory requirements which factory and mine owners and firms engaged in the loading and unloading of ships have to comply with in the matter of the fencing of dangerous machinery, an organised "safety-first" campaign for the better education of the workers in the matter of accident prevention is both necessary and desirable. Under the direction of the Railway Board of the Government of India all railways in India have undertaken extensive schemes of safety-first propaganda. These include the putting up of safety posters and safeguards both in English and in the vernacular of the district at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic-lantern lectures; and the organisation of special safety first committees in the larger workshops. The Factory Department of the Government of Bombay with the assistance of the Bombay

Millowners' Association and the Bombay Millowners' Mutual Insurance Association has made good progress in the posting of safety first posters in cotton mills in Bombay City; and the Millowners' Association in conjunction with the St. John's Ambulance Association started classes for first aid training with effect from 1931. Several other large labour employing organisations such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and the Tata Iron and Steel Works at Jamshedpur, to mention only a few, are, with railways, pioneers in the field of organisation of 'safety first' measures. It is of interest to note that as many as thirty cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1935 and that many more had given an undertaking to the factory Department to do so as soon as possible.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act, 1934, and the rules made under these Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may, however, be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious (*i.e.*, accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

Prior to the passing of the 1934 Factories Act, some of the local Governments had framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing over 500 operatives. Section 32 (b) of the 1934 Act, however, makes it obligatory on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed

by local Governments in the matter. At the moment of writing no information is available as to the extent to which the rules have been complied with but from the personal experience of the compiler of this note it may be stated that almost all the large labour employing organisations in India do maintain a complete equipment of first aid appliances and that several provide stretchers as well.

UTILISATION OF THE WORKERS' LEISURE.

The Industrial Disputes Committee (the Stanley Reed Committee), appointed by the Government of Bombay in 1922 to enquire into the causes of the wide industrial unrest prevalent about that time and to make recommendations, were, *inter alia*, of opinion that employers should organise extensive schemes of welfare particularly with regard to the proper use of workers' leisure, in order to keep the workmen both contented and happy and out of mischief. In pursuance of the Committee's recommendations in the matter several cotton mills and groups of mills in the Bombay Presidency—notably the Currimbhoy Ebrahim group of mills, the Sholapur Spinning and Weaving Mills and the Tata Mills—inaugurated wide schemes embracing facilities for education and recreation. All these groups formed special welfare institutes and placed them under the charge of special welfare officers. Much good work was done but with the depression in trade which followed coupled with the financial difficulties in which many of these mills were involved most of the excellent schemes that had been established were either severely curtailed or abandoned. To day, few mills are doing anything for the proper utilisation by their work people of their leisure hours. The pioneering work in this field is being done by the railways. All railway systems have established sports clubs and institutes at suitable distances and places for the recreation of their employees. The railways provide land, buildings and equipment and the institutes are run by the members themselves from their own subscriptions. In certain cases separate club houses and institutes are provided for officers, for non-gazetted Europeans and Anglo-Indians and for Indians and in a few cases for the lower types of workmen as well. All forms of sports and recreation are played at these institutes and railway hockey and football teams are among the finest in India.

Almost all the larger labour employing organisations such as the Bombay Port Trust, the Burma Shell Corporation, the bigger municipalities, the Tata Iron and Steel Works at Jamshedpur, the British India Corporation in the United Provinces, the Empress Mills at Nagpur, etc., have devised wide welfare schemes and in many cases these are under the charge of special welfare or labour officers. In some cases grants-in-aid are given to such outside organisations such as the Young Men's Christian Association, the Kirkee Education Society, the Social Service League, etc., to take charge of certain sections of welfare activities particularly with regard to recreation and the education of both workers and workers' children.

As far as education is concerned, the railways are again pioneers in the facilities provided both for the education of their illiterate staffs and for the children of different classes of railway employees. The N. W. Railway recently started three experimental schools for adult workers in the locomotive sheds at Lahore, Sibsar and Kotri. The experiment is confined to locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway has provided nearly 40 schools for the employees of the operative department. The B.E. & C.I. Railway have six schools for imparting instruction in the three R's and as an inducement to study a bonus of Rs. 5 is paid to each man passing a simple test. With regard to the children of railway employees, in addition to about 100 schools for European and Anglo-Indian children, all the railway systems in India maintain a total of nearly 140 schools for Indian children at a cost of nearly a lakh and a half of rupees per annum. These schools are attended by over 16,000 children. The Railway Board also gives grants amounting to about Rs. 50,000 per annum to aided schools for Indian Children. These are attended by 8,000 children of Indian railway employees.

In Bombay, the Municipality has introduced compulsory education in the F and G Wards of the City which are chiefly peopled by mill-hands. The Social Service League maintains several night schools and a Textile Technical Institute at Parel for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A. also conducts several night schools.

The Royal Commission on Indian Labour have recommended that there should be a more general extension on the part of the employer of welfare work in its broader sense; and that in the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare centre and health visitor under the supervision of a doctor employed by the group. Owing partly to reasons of financial stringency but mainly to indifference on the part of the majority of employers, no action has as yet been taken on this recommendation and although several of the larger industrial units in India have done a great deal of pioneering work in the field of industrial welfare, much still remains to be done because more than fifty per cent. of India's industrial workers are still not covered by any schemes of welfare whatever.

COST OF LIVING AND STANDARD OF LIFE.

COST OF LIVING.

Bombay was the first province in India to compile and publish monthly cost of living index numbers for working classes. The scope and method of compilation of the index for Bombay City are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. The index has been published by the Labour Office of the Government of Bombay since January 1918 and, in the absence of any family budget enquiry until a few years after the first publication of the index, the

aggregate expenditure method has been followed in compiling the index. In all, 24 items representing food, fuel and lighting, clothing and rent have been included in the index and account is taken only of the effect of the changes in the prices without any reference to changes in the standard of living since July 1914 which is the base period. The Bombay working class cost of living index numbers for certain selected months as well as the annual averages for each of the years 1918 to 1935 are given in the table below:—

Bombay Working Class Cost of Living Index Numbers.

(July 1914=100.)

Year.	January.	April.	July.	October.	Annual average.
1918	134	144	149	175	154
1919	182	167	186	174	175
1920	183	172	190	193	183
1921	169	160	177	183	173
1922	173	162	165	162	164
1923	156	156	153	152	154
1924	159	150	157	161	157
1925	157	158	157	153	155
1926	155	153	157	155	155
1927	156	153	156	151	154
1928	154	144	147	146	147
1929	149	148	148	149	149
1930	147	140	139	131	137
1931	117	111	108	108	110
1932	110	108	109	109	109
1933	109	101	103	100	103
1934	96	93	97	100	97
1935	98	98	101	103	101

A revised cost of living index for Bombay City based on the results of the enquiry into working class family budgets in Bombay City, 1932-33, published in 1935 is under consideration and the new series will be published shortly.

Working class cost of living indexes for Ahmedabad and Sholapur have been compiled on a post-war basis and published in the *Labour Gazette* month to month since the beginning of the year 1928. The bases of these indexes are

the results of the family budget enquiries conducted at these two centres in the years 1926 and 1925 respectively. Details regarding the scope and method of compilation of the index for Ahmedabad have been given in the January 1930 issue of the *Labour Gazette* and for Sholapur in the February 1931 issue of the same publication. The following tables give for these two centres the working class cost of living index numbers—for certain selected months as well as annual averages—for the years 1928-1935.

Ahmedabad Working Class Cost of Living Index Numbers.

(August 1926 to July 1927=100.)

Year.	January.	April.	July.	October.	Annual average.
1928 ..	93	91	97	97	95
1929 ..	99	96	98	98	97
1930 ..	93	89	88	82	87
1931 ..	75	75	75	74	75
1932 ..	76	74	75	79	76
1933 ..	73	70	73	73	72
1934 ..	70	69	72	71	71
1935 ..	72	69	71	70	71

Sholapur Working Class Cost of Living Index Numbers

(February 1927 to January 1928=100)

Year.	January.	April.	July.	October.	Annual average.
1928	92	95	95	..
1929 ..	100	98	100	102	101
1930 ..	104	94	92	85	92
1931 ..	76	72	71	72	73
1932 ..	72	72	74	74	73
1933 ..	73	67		68	69
1934 ..	68	67	73	76	72
1935 ..	75	72	71	72	72

A beginning has been made in recent years by the Central Provinces and Burma to publish similar index numbers. In the Central Provinces cost of living index numbers have been compiled for Nagpur and Jabulpore with January 1927 as base, and in Burma similar num-

bers are compiled for four classes of industrial workers in Rangoon on base 1931=100. The following table sets out the index numbers for Nagpur and Jabulpore and for the four classes of industrial workers in Rangoon for each month in 1935:—

Cost of Living Index Numbers for Nagpur, Jabulpore and Rangoon for each month of 1935.

Month.	Base period : January 1927.		Rangoon.				
	Nagpur.	Jabulpore	Burmans.	Tamils, Telgus and Oriyas.	Hindu- stanis.	Chitta- gonians.	
January	56	55	86	90	89	85	
February	59	58	86	90	91	85	
March	58	53	83	88	90	83	
April	57	54	89	92	92	88	
May	58	55	91	93	93	89	
June	58	56	97	96	94	95	
July	58	57	95	95	93	93	
August	58	58	94	95	93	93	
September	59	57	93	95	93	92	
October	60	59	90	94	94	89	
November	61	56	87	93	95	88	
December	58	56	87	93	94	87	

STANDARD OF LIFE.

The results of family budget enquiries conducted by what is known as the 'extensive method' form the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satiate wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation, etc., is therefore a sure indication of an improved standard of living. The Bombay Labour Office has carried out two family budget enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33 and the results were published in the years 1923 and 1935 respectively. As has already been mentioned, similar enquiries have also been conducted in Ahmedabad and Sholapur cities and the results

of both these enquiries were published in the year 1928. In Burma, the Labour Statistics Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon. A number of family budgets have also been collected at Cawnpore in the United Provinces and at Nagpur and Jabulpore in the Central Provinces with the object of compiling cost of living indexes. The effort in the case of the former Province proved futile and that Province is not therefore at present compiling any such index.

The following comparative data regarding the distribution of expenditure would serve to indicate the standards of life of working classes at different centres in India:—

Percentage Distribution of Expenditure.

Groups.	Bombay (1932-33).	Ahmedabad (1926).	Sholapur (1925).	Nagpur (1927).	Jabulpore (1927).	Rangoon (1928).
Food	46.60	57.90	49.25	64.10	66.00	52.8
Fuel and light	7.11	7.04	9.60	9.62	7.95	5.2
Clothing	7.75	9.45	11.86	10.70	10.86	10.6
House rent	12.81	11.74	6.27	1.92	1.44	13.9
Miscellaneous	25.73	13.87	23.02	13.66	13.75	17.6
Total	100.00	100.00	100.00	100.00	100.00	100.0

NOTE.—The figures are not strictly comparable due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

The standard of life is more often than not conditioned by size of the family and its income. The following figures are of interest in this connection :—

	Bombay.	Ahmedabad.	Sholapur.	Nagpur.	Jubbulpore.	Rangoon (Burmese).
Average size of the family (in persons)	3.70	3.87	4.57	4.33	3.76	3.01
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Average monthly income .	50 1 7	44 7 2	39 14 10	58 8 3

It will be seen that the 'miscellaneous' group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interest on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour have made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act, 1936 to which reference has been made in an earlier section, is a measure intended to secure to the workmen prompt payments of earned wages so that they may not be put to the necessity of incurring or accumulating debts. The Government of India have under consideration certain other pieces of legislation which are also designed to improve the lot of the industrial worker. Following the recommendations of the Labour Commission, the Government of India have introduced a Bill in the Legislative Assembly to amend the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. The Select Committee on this Bill have only recently presented their report. Another recommendation of the Labour Commission is that at least

so far as industrial workers in receipt of wages or salary amounting to less than Rs. 100 per month are concerned, arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and unwilling to pay. The Government of India after consulting the provincial Governments have decided to undertake legislation on this recommendation on an experimental scale restricted to the province of Delhi in the first instance. A third recommendation of the Whitley Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various local Governments on this question, the Government of India came to the conclusion that central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, introduced legislation to make besetting of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders' Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was an effort in this direction. But, unfortunately, the motion for the reference of the Bill to a Select Committee was lost.

WAGE RATES AND EARNINGS.

The only reliable and satisfactory data in connection with wage rates and earnings of industrial workers in India are those contained in the reports of enquiries conducted by the Labour Office of the Government of Bombay for the Bombay Presidency. The Government of India made an attempt to institute a general wage census in India in 1921 but the necessity for retrenchment at the time led to the abandonment of the project and to-day little or no definite information regarding rates of wages is available for any province outside the Bombay Presidency. Such information as there is relates to agricultural labour and is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages. Some of the annual factory administration reports published by the Provincial Governments in India contain remarks about prevalent wage rates but these relate only to certain units and they can by no

means be considered as being the dominant rates at any one time for any particular industry or area. The annual mines administration reports also contain figures for daily earnings for certain main occupations in representative mines in the provinces in which mines are situated but these are also open to the same objection. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every commission and committee appointed in the country since the beginning of the century and notably by the Royal Commission on Indian Labour whose work was considerably hampered as a result of the paucity of satisfactory information on the subject.

The blame for the lack of information about wages in India cannot lie entirely at the doors of the Central and Provincial Governments. The collection of satisfactory wage statistics is always an exceedingly difficult matter and more

particularly so in India where conditions vary so markedly and widely not only between industry and industry and centre and centre but also between unit and unit in the same industry in the same centre. In the section on hours of work and conditions of employment, some indications have been given of the wide variations in the periods and methods of wage payment. To quote an example: one textile mill in Ahmedabad has five different wage periods for different groups of workers with variations in methods of wage calculation for the workers in each group—(1) persons employed in the mechanical, subordinate supervisory and maintenance departments on both daily and monthly rates of wages are paid for periods of one calendar month; (2) weavers on piece rates are paid bi-weekly or for periods of 14 days, not always for the period beginning with the Monday of one week and ending on the Sunday of the following week but for 14 consecutive days beginning with any day in the week; and even then not all the weavers in the mill are paid for the same period; they are divided into batches and it often happens that whereas the number of working days for one batch may be 12, the working days for another may be eleven or less; (3) daily, monthly or 'hapta' rated workers on the spinning side are paid for 'haptas' or periods of 16 days and these haptas vary for different batches of workers; (4) women reelers and winders on piece rates are paid bi-monthly, i.e., for two periods in a calendar month, one from the 1st to the 15th and the second from the 16th to the end of the month; and (5) coal and basket carrying cooly labour on daily or weekly rates is paid weekly. The variations shown are only in one unit,—those that could and do exist between different units can be better imagined than described for their number is legion. The situation is further complicated by the fact that the nomenclature adopted for designating occupations also varies widely between district and district and concern and concern in the same district owing to the use of a host of vernacular and arbitrary terms and of nicknames. Thirty-six mills which submitted information to the Bombay Labour Office in 1926 for its enquiry into textile wages in three centres of the Bombay Presidency for that year used over a thousand different terms for designating 150 odd cotton textile occupations! Even in concerns which use standard English occupational terms, the position is rendered more difficult owing to the existence of arbitrary gradings of different occupations into several sub-grades and classes. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in India, therefore, must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms, and (3) the thorough education and instruction of the clerical staffs of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns. The existence of wide variations in rates and conditions, moreover, makes it advisable to cover as many as possible if not all the units in the industry under survey in order that results which are not biased one way or the other may be secured. In view of what has been stated it is obvious

that no Government in India can undertake a comprehensive enquiry into industrial wages unless it has at its disposal an adequate and thoroughly trained and experienced staff for the purpose. The only Provincial Government in India which has such a staff is the Government of Bombay.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted the following enquiries into wages in the Bombay Presidency:—

1. An Enquiry into Wages and Hours of Work in the Cotton Mill Industry in the Bombay Presidency for May 1921. Results published in a special report in 1923.

2. Agricultural wages 1900-1922 based on the information collected monthly from all talukas (revenue areas) in the Bombay Presidency since 1890 in a prices return form known as Taluka Form No. XVIII. In this form returns were made to the Director of Agriculture of the predominant daily rates of wages on the 1st and the 15th of each month for able-bodied adult male field, ordinary and skilled labourers employed in the vicinity of the headquarters town of each taluka. The data relating to prices were tabulated by the Director of Agriculture and published in the *Bombay Government Gazette* but no use was made of the figures for wages. The Labour Office collected the figures recorded in the Department of Agriculture for the 23 years from 1900 to 1922 and the report of the survey was published in 1924. In 1925 the wages portion of the Taluka Form No. XVIII was amplified so as to secure information for women workers as well and also for both cash wages and wages in kind, and separated from the prices form. Whilst the prices return was to be submitted to the Director of Agriculture as usual, the wages return was to be submitted to the Labour Office. Continuation figures since 1922 are contained in the reviews on "Mofussil Labour and Wages" which are compiled by the Labour Office for publication in the annual General Administration Reports of the Bombay Presidency and these are also reproduced in the *Labour Gazette*.

3. An Enquiry into the Wages of Peons in Government and Commercial Offices in Bombay City. Conducted in 1922 and results published in the March 1923 issue of the *Labour Gazette*.

4. An Enquiry into Wages and Hours of Work in the Cotton Mill Industry in the Bombay Presidency. Conducted in 1923 and results published in a special report in 1924.

5. An Enquiry into the Wages of Municipal Employees in the Bombay Presidency. Conducted in 1924 and results published in the July 1925 issue of the *Labour Gazette*.

6. Clerical Wages in Railway and Commercial Offices in Bombay City. Conducted in 1924 and results published in four issues of the *Labour Gazette* for February to May 1925.

7. An Enquiry into Wages and Hours of Work in selected Cotton Textile Mills in Bombay, Ahmedabad and Sholapur conducted in 1930. Results published in a special report in 1930. The 1921 and 1923 enquiries into textile wages were conducted on the basis of aggregate figures for all the workers in each occupation in a unit; thus:—two loom weavers: 340; aggregate man-days in the (selected) month: 7,820; aggregate earnings during the month: Rs. 12,897. No information was collected about rates and in the absence of figures for individuals it was not possible to work out frequencies of attendance, rates and earnings. The aggregate method was therefore discarded in 1926 and information was called for for every individual worker on the basis of the muster and the pay rolls.

8. Selected Printing Presses in Bombay City. Conducted in 1929. Results published in the June 1931 issue of the *Labour Gazette*.

9. Departmental Enquiry into Wage Cuts in Cotton Textile Mills in the Bombay Presidency. Conducted early in 1934 and results published in a special report in the month of June of the same year.

10. The first part of the General Wage Census covering all *Perennial Factories* in the Bombay Presidency for May 1934. (A descriptive note on the origin and scope of this enquiry and the methods adopted for conducting it has already been given in the first part of this note. As we go to Press, the first two volumes of the series of reports in connection with this part of the Census covering Wages, Hours of Work and Conditions of Employment in the Engineering and Printing Industries have been published. Four other reports—(3) Textiles; (4) All Industries except the Engineering, Textile and Printing; (5) Supervisory and Clerical Staffs in *Perennial Factories*; and (6) General Report—are expected to be published during the winter of 1936-37.

11. Enquiry into the conditions of Work and Wages of Workers employed in the Building Trade in Bombay City. Conducted in 1935. Results published in the August 1935 issue of the *Labour Gazette*.

12. Enquiry into the Conditions of Work and Wages in some Unregulated Factories in Bombay City. Conducted in 1935. Results published in the October 1935 issue of the *Labour Gazette*.

13. Enquiry into Wages, Hours of Work and Conditions of Employment in the Retail Trade of some towns of the Bombay Presidency. Conducted in 1935. Results published in a special report early in 1936.

14. The second part of the General Wage Census covering seasonal factories in the Bombay Presidency. Conducted in the winter of 1935-36 and the summer of 1936. Results expected to be published about the end of the year 1936.

WAGE RATES.

Certain important facts govern all discussions on wage rates in India. Firstly, there is no

Government machinery for the fixation of minimum wages; and, in the absence of strong trade unions covering entire or sections of whole industries, there are no trade agreements or union rates which have been accepted both by employers and employees. There are also no awards by conciliation boards. The bargaining power of the workers is moreover weak; and the cumulative result of all these various factors is that employers are almost entirely at liberty to fix any rates they like. Secondly, except for a limited measure of standardisation of time rates of wages for unskilled occupations in the cotton textile industry in Bombay City, there is little or no standardisation of rates in any industry in the country; and, consequently, wage rates not only vary widely between centre and centre and unit and unit in the same centre but also between different individuals in the same occupation in one unit. This variation in rates is further complicated by the fact that the rates are often subject to various additions in the form of dearness allowances and/or good attendance and efficiency bonuses and to deductions for percentage cuts. Thirdly, frequent changes are made in the basic units of time for which rates are fixed; e.g., rates which are monthly or daily may be changed into daily or hourly rates. Fourthly, almost all the principal occupations in Government and railway concerns and in the industrial establishments of public and local bodies are divided into several grades and sub-grades. The basis of the grading in all cases is arbitrary and varies widely between the different administrations. Fifthly, vacancies are seldom if ever filled on the same rates as those paid to the workers who have left. In such cases advantage is usually taken to lower rates and the wages offered to new entrants depend more on their personal ability and degree of competence and also to the rates prevalent in other similar concerns and the supply of the type of labour required. The factors of personal competence and the capacity of bargaining power are the most important considerations in wage fixation. The first varies widely between individual and individual among Indian workers and whereas a minority in all occupations may be thoroughly efficient, the same cannot be said of the majority. The second depends upon densities of industrial populations in particular locations. Lastly, rates vary widely between town and town and in the case of the semi-skilled and unskilled operations. But, this variation operates within narrower limits for the more skilled occupations in which the really skilled artisans are able to command their due anywhere. In view of these several diversely varying factors it is impossible to give any rates of wages which will be found to be generally applicable to any particular industry in any particular centre. The compiler of this note, however, has had a wide experience of wages in India and the following figures quoted by him give an approximate idea of the predominant rates for fairly efficient workers in certain of the more important occupations in all sections of Indian industry:—

Occupations.	Most usual period of payment.	Rates in		
		Cities.	Towns.	Mofussil.
		Rs.	Rs.	Rs.
Foremen (European)	Monthly	500 to 700	400 to 600	350 to 550
" (Indian)	"	300 to 500	250 to 350	250 to 300
Chargemen	"	200 to 250	175 to 225	200 to 250
Malstries	"	90 to 125	80 to 110	75 to 100
Steam Engine Drivers	"	60 to 75	50 to 70	35 to 50
1st Class Boiler Attendants	"	70 to 90	65 to 80	60 to 75
2nd " " "	"	45 to 70	40 to 60	35 to 50

Unskilled workers (all occupations)—Women	"	0 10 0	0 8 0	0 6 0

MOVEMENTS OF WAGE RATES.

The only satisfactory criterion on which to base any broad conclusions regarding movements of wage rates in any industry in any industrial area or centre in India would be to take the total wages bills for equal numbers of workpeople in the same or similar occupation groups at any two dates and to ascertain the percentage increase or decrease between the two sets of figures. Attempts made by the Bombay Labour Office to do this during its enquiries in connection with the General Wage Census were largely frustrated owing to the existence of irreconcilable variations of principle and considerable diversity in practice not only as between unit and unit but also in the same unit as for example in the cotton textile mill in Ahmedabad which had been dealt with above. The comparisons which employers most need to day are those with 1914, or, in other words, with the pre-war year. All the pay and muster rolls for that year were, however, destroyed long ago but most units in the textile industry in Bombay have their 'basic' time and piece rates from which they calculate the earnings on which the percentage dearness of food allowances are computed.

References have often been made in this note to the dearness allowances of 80 per cent. for weavers and of 70 per cent. for all other operatives granted in the textile mills in Bombay City until the middle of 1933 when the Bombay Millowners' Association permitted its individual affiliated members to take independent action in the matter of reducing these allowances. The stages by which these allowances came to be granted were as follows: January 1918—15 per cent.; January 1919—raised to 35 per cent.; February 1920—raised to 75 per cent. for weavers and to 55 per cent. for all other operatives; November 1920—raised to 80 and 70 per cent., respectively. These allowances were on the "basic" rates of 1914 or of some other year between 1914 and 1917—rates which were not only not standard for all mills in Bombay City but which actually varied widely as between mill and mill. For example the results of the 1926 enquiry conducted by the Bombay Labour Office showed that in the 19 mills selected for the enquiry in Bombay City the average earnings (from basic rates plus allowances) of two loom weavers varied between Rs. 1-9-1 and Rs. 2-1-6 per day, of siders between Rs. 0-14-3 and Rs. 1-2-11 per day, of warpers between Rs. 1-10-3 and Rs. 2-14-0 per day and for women grey winders between annas 8-3 and annas 15-5 per day. Notwithstanding these wide variations it is, however, possible to state that wage levels in any particular textile mill in Bombay City were, on the whole, about 70 per cent. higher than the pre-war year at the beginning of the year 1933. During the latter half of 1933 and in the beginning of 1934 all mills in Bombay effected considerable cuts in the dearness allowances and in some cases also in the basic rates. If a later year be taken for purposes of comparison, say 1926, when the Bombay Labour Office made a thorough survey of prevalent rates, the report of the Departmental Enquiry conducted into wage-cuts by that office in 1934

showed that wages in the Bombay mills as compared with July 1926 were lower by 21 per cent. in April 1934.

In Ahmedabad the war or dearness allowances paid in textile mills in that centre varied widely for different occupations and a general comparison with the pre-war year is therefore not possible; but, as compared with 1926, wages at the beginning of 1934 were five to six per cent. higher. This, however, was neutralised by the cut of 61 per cent. which was brought into effect from 1st January 1935.

In Sholapur, the increases in wages granted by individual mills between 1916 and 1919 were consolidated with the rates prevailing in 1914. At the beginning of 1920, the Sholapur millowners gave their first separate dearness allowance in the form of wages in kind—certain quantities of grain—to all those workers who did not remain absent for more than four days in a month. Workers who failed to put in the required attendance were deprived of this benefit and the agitation of both these and the other workers for higher rates led to the Sholapur millowners conceding dearness allowances in cash of 35 per cent. over the rates of 1919 to weavers and of 30 per cent. to all other operatives. The value of the grain allowance varied with fluctuation in prices. The existence of several conflicting factors in the wages position in Sholapur prevents the estimate of an accurate comparison with 1914; but, as compared with 1926, wages at the beginning of 1934 were 17 per cent. lower. Owing to the lack of the necessary data for the purpose, similar comparisons for other industries and for other provinces are not possible.

EARNINGS.

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, statistics of earnings alone are of value for the proper assessment and appreciation of the well being of the masses, provided however that the term "earnings" has one uniform meaning in its computation and application. In practice, the connotation of the term varies widely for it is commonly applied to one of three different values: (1) gross earnings; (2) net earnings; or (3) the amount which a workman receives in his pay envelope. In correct statistical parlance it is none of these three. Let us explain. "Gross earnings" for any particular pay period are the total dues of a wage earner from his basic rates—time or piece—plus all the allowances, bonuses and perquisites—or the value of such where they are not in cash—to which he may be entitled by virtue of his contract of employment and includes wages given for any periods of leave with pay which may be granted during such pay period. The allowances may either be in the form of dearness allowances in cash or grain allowances or allowances for overtime work. Bonuses may be for good attendance and/or for efficiency. Perquisites may be in the form of free housing, travelling allowances, free medical attendance, free railway passes, etc. "Net earnings" are gross earnings less deductions for fines and any payments which a workman may have to make for the use of tools or

for the loss of or damage to articles in the process of manufacture, e.g., as in textile mills in Ahmedabad for damaged cloth. "The amount in the pay envelope" is net earnings less any further deductions which may be made by an employer for house rent, medical attendance, subscriptions to provident funds, income tax, refunds of advances, payments for purchases from co-operative stores or cheap grain or cloth shops, repayments of loans from provident fund account or from co-operative credit societies, subscriptions to sports clubs or institutes, etc. The amount in the pay envelope can never be reckoned as earnings because every worker is expected to pay for his income tax, house rent and purchases and to liquidate his other liabilities and debts from his income. In all cases where fining is widely prevalent gross earnings can also not be reckoned as income because these may be habitually liable to deductions for fines. "Net earnings" would most correctly approximate to earnings for statistical purposes were it not for the fact that in cases where deductions are made from wages for value of damaged material at cost or at selling price, the damaged article is handed over to the workman who is generally able either to use it himself or to sell it. Sufficient has been stated to show how difficult the computation of "earnings" can be. Different statisticians and different bodies hold different views as to its correct computation and that is the reason why the term "earnings" is so widely interpreted. The most frequent and general usage of the term for statistical purposes is to take gross earnings in cash less fines and without valuating such perquisites as free housing, free medical attendance and free railway passes in the case of railway workers, and to include travelling allowances where these are paid for conveyance between place of work and home but not when they are paid for transport to some other temporary sphere of work. This is the basis on which figures for "earnings" were collected by the Bombay Labour Office for the purposes of the General Wage Census; and, subject to minor modifications, for its other enquiries into wages. It is of the utmost importance that in the conduct of every enquiry into wages, all the persons who are entrusted with the work of filling up the required returns should have a clear and thorough conception as to what should or should not be included in "earnings."

Two sets of figures may be compiled for "earnings": (1) *average daily earnings* ascertained by dividing the total earnings for a group of workers in any occupation by the total of the number of days actually worked by all the individuals in the group; and (2) *average monthly earnings* ascertained by dividing the total earnings of the group for a period of one month by the number of persons in the group. In cases where statistics have been collected for wage periods of less than a month, monthly averages can be reckoned by ascertaining the weighted average of the number of days worked by all the units concerned in the month in which the shorter period is contained and by multiplying the figure for average daily earnings by the weighted average less the figure for average absence as shown by the figures for average percentage attendance for the group. *Average percentage attendance* is the percentage ratio of the total number of days actually worked by all the individuals in a group to the possible working days in the pay period for the group.

Part I of the General Wage Census covering all perennial factories in the Bombay Presidency covered nearly a thousand occupations in nearly twenty industries. Of these, the reports covering the engineering and printing industries alone were published before this issue of *The Indian Year Book* went to press. For the purposes of the census the Bombay Presidency was divided into ten territorial areas and the reports contain the averages of daily and monthly earnings in all the occupations concerned in each of these ten areas. It is obviously not possible for us to reproduce the figures here but for purposes of general interest we give below—(1) the average of monthly earnings for six of the most important occupations which are to be found in all factories, but particularly in engineering workshops; (2) the general averages for men in all engineering and common occupations in all factories; (3) the average monthly earnings in six of the most important printing occupations; and (4) the general averages for all "process" operatives in all printing presses which are factories for the purposes of the Indian Factories Act in the Bombay Presidency. The figures in brackets in the first and the third tables show the numbers of workers covered by the averages to which they relate.

The Textile Industry.—The General Wage Census Report on the textile industry is not expected to be ready till the end of the year 1938. The latest figures for the average earnings in ten of the most important occupations in the Bombay Presidency are those contained in the Report of the Departmental Enquiry conducted by the Labour Office early in 1934. The following table sets out the average daily earnings for these occupations in the six terri-

torial areas into which the textile mills of the Presidency were divided for the purposes of that enquiry:—

Average Daily Earnings in Textile Mills in the Bombay Presidency.

Occupation.	Bombay.	Ahmedabad.	Gujarat excl. Ahmedabad.	Sholapur.	Khandesh.	Southern Mahratta.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Drawing Tentersmen ..	1 2 8	1 3 11	0 14 5	0 12 11	0 13 9	0 11 0
Slubbing Tentersmen ..	1 3 10	1 5 11	1 1 8	0 14 8	0 13 10	0 13 1
Inter Tentersmen ..	1 3 2	1 1 5	1 0 0	0 13 2	0 13 1	0 12 1
Roving Tenters ..	1 2 4	1 3 10	0 14 6	0 12 3	0 11 11	0 11 1
Ring Spinners*	0 14 10	1 0 10	0 12 9	0 10 7	0 10 4	0 8 1
Tarwallas* ..	0 13 2	0 8 0	0 8 0	0 5 7
Doffers* ..	0 10 10	0 11 7	0 7 11	0 7 3	0 6 0	0 5 2
Two Loom Weavers ..	1 8 10	1 14 11	1 10 6	1 8 0	1 4 2	0 15 3
Winders—Women ..	0 11 9	0 11 11	0 8 6	0 5 8	0 7 2	0 6 3
Reelers—Women ..	0 11 0	0 12 2	0 9 8	0 5 6	0 8 3	0 6 8

* In the case of these occupations the averages in most cases are for men only and in some for both men and women workers.

Provincial factory administration reports show that the monthly earnings of cotton weavers and spinners in some other provinces are as follows: Central Provinces and Berar Rs. 30 and Rs. 15; Bengal Rs. 25 and Rs. 14; Punjab Rs. 28 and Rs. 20; and Madras Rs. 27 and Rs. 20. In the Jute mill industry, single shift hessian weavers earn 31 per month and the average for both warp and weft spinners is Rs. 17-4-0 per month. The earnings of women workers in jute mills vary between Rs. 11 per month for most occupations and Rs. 15 per month for twisters.

RECOMMENDATIONS OF THE ROYAL COMMISSION.

The Royal Commission on Indian Labour have made several important recommendations in connection with the income of industrial workers and the question of their indebtedness. In discussing the possible application to India of the minimum wage Convention adopted at the 1928 session of the International Labour Conference, the Commission were of opinion that the Convention, in referring to trades in which wages are exceptionally low, must be regarded as having in view trades in which wages are low, not by comparison with western or other foreign standards but by comparison with the general trend of wages and wage levels in kindred occupations in the country concern-

ed." If the principle of the minimum wage were to be applied to India, they considered that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining. The industries indicated for a careful study of conditions are mica, wool cleaning, shellac, bidi (the indigenous cigarette) manufacturing, carpet weaving and tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation. Full information re. wages and conditions should be collected and if the surveys indicate "sweating" the trades should be demarcated and the number and the composition of wage boards should be decided. In the setting up of wage boards important criteria for consideration should be the cost of enforcement; and the policy of gradualness should not be lost sight of. If the investigations appear to warrant minimum wage fixing machinery, the necessary legislation for setting up such machinery should be undertaken. These recommendations are under the consideration of the various Provincial Governments and reference has already been made to the action taken by the Government of Bombay in instituting a General Wage Census to be completed in about five years in order to collect all possible information on the subject of wages in all types of industrial concerns in the Bombay Presidency.

WORKMEN'S COMPENSATION.

Under the ordinary common law an injured workman is entitled to recover damages or compensation for an injury sustained by him in the course of his employment if the injury is proved to have been caused by the personal negligence of his employer. In addition, the Indian Fatal Accidents Act of 1855 permitted the award of damages to the dependants of a deceased workman if the accident resulting in his death was due to the wrongful act, neglect or fault of the person responsible for the accident. The procedure in connection with the recovery of damages under both the common law and the Fatal Accidents Act was, however, extremely cumbersome. This together with the ignorance and the illiteracy of Indian workers and their financial disability in undertaking extensive litigation had placed them in a very disadvantageous position in suits for compensation. Moreover, with the growing industrialisation of the country, accidents were annually becoming more numerous than before and, in their results, were responsible for considerable hardship on the workers and their families. Disabilities similar to these had been removed in most of the industrialised countries of the world by the passing of workmen's compensation laws providing for easy and speedy relief to workmen injured as a result of industrial accidents and to their dependants in cases where the accidents resulted in death. The necessity for such legislation in India was obvious and the Government of India drew up proposals for a Workmen's Compensation Act which they circulated to all local Governments in 1921. The proposals met with a fair measure of approval and the Government of India drew up a Bill which they introduced in the Legislative Assembly in September 1922. After its reference to a Select Committee, the Bill was passed in March 1923 and the Indian Workmen's Compensation Act was brought into operation with effect from the 1st July 1924. This was the first piece of legislation in the field of social insurance in India.

WORKMEN'S COMPENSATION ACT, 1923.

In its main principles, the Indian Act follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933 and the Act as it stands to day covers over seven million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negli-

gence and injured workmen or the dependants of those killed can obtain compensation in all cases where personal injury has been caused by accident arising out of and in the course of employment and where the accident is not directly attributable to misconduct, breaches of rules or orders or disregard of safety devices. Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident; provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 by the addition of (1) poisoning by benzene and its homologues or the sequelae of such poisoning, (2) chrome ulceration or its sequelae, and (3) compressed air illness (Caisson Disease) or its sequelae.

The Royal Commission on Indian Labour made a long series of recommendations for the improvement of the Act; firstly, to extend its scope so as to cover all types and classes of workers who were likely to be most affected by the increased risks of modern industry; secondly, to enhance the scales of compensation payable and to facilitate the methods for their payment; and, thirdly, to effect various changes designed to improve the administration of the measure. It is not necessary for the purposes of this note to trace the evolution of the legislation in connection with workmen's compensation in India since the passing of the first Act in 1923 and it will be more useful if we gave the main provisions of the Act as it stands today because that is what is most needed in a compact work of reference such as the *Indian Year Book*.

Classes of Workmen Covered by the Act.—These have been specified in the definition of the term "workman" contained in section 2(1) (a) and in schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 300 are excluded. Speaking broadly, the Act covers railways; factories; mines; seamen; docks; persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height, or of dams and embankments, roads, bridges or tunnels, or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canal pipe lines or sewers; the fire brigade; railway mail service; operations for winning natural petroleum or natural gas; blasting operations and excavations; ferry

boat services; cinchona, coffee, rubber or tea plantations; electricity or gas generating stations; lighthouses; cinematograph picture producing and exhibiting; divers; elephant and wild animal trainers and keepers and salaried motor drivers and chauffeurs. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered. As far as seamen are concerned, both seamen on ships registered in India and those on ships registered in foreign countries are included. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Governor-General in Council is empowered to bring within the scope of the Act other classes of workmen whose occupations are of a hazardous nature.

Amounts of Compensation Payable.—The amount of compensation payable depends on the average monthly wages of an injured or deceased workman. The term 'wages' includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of injured workmen whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half his monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000 Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused.

(NOTE: *Permanent total disablement* means—such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent. loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependents.—These are defined in two categories: firstly, those who are in practically all cases actually dependants; and secondly those who may or may not be in that position. The first includes a wife, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a husband, a

parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

General.—The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Local Governments. The Bengal and Madras Presidencies have one Commissioner each for the whole province. The Bombay Presidency has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

STATISTICS OF WORKMEN'S COMPENSATION.

The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the original Act came into force. These statistics relate to the more important classes of workers, i.e., workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 8½ lakhs of rupees in 1925, 8½ lakhs in 1926, 11 lakhs each in 1927 and 1928, 12½ lakhs in 1929 and 1930, 10½ lakhs in 1931, 8½ lakhs in 1932 and 8 lakhs in 1933. The following table shows the number of cases, classified by nature of injuries and the amounts of compensation paid in each year since 1924:—

Workmen's Compensation Statistics—All India, 1924-35.

EFFECT ON INDUSTRY.

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was faced. In the Punjab, the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being

provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, insurance companies were concerned with half the number of cases that came up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

TRADE UNIONISM AND TRADE UNION LAW.

The earliest known trade unions in India were (1) The Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act; (2) The Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; and (3) The Bombay Postal Union which was formed in 1907. The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the Great War. Trade organisations were, however, not unknown and trade or craft guilds had a definite place in the social economy of the village communities. Each trade or craft was the monopoly of a particular caste, and the organisation that existed for each occupational caste was known as a 'guild'. The two main functions of these guilds were (1) to regulate the relations between the members *inter se*; and (2) to deal with questions affecting the relations of the caste as a whole *vis-a-vis* the community. The *panchayats*, as the executives of these guilds were called, enforced their decisions on their members by means of social sanctions, and their demands on the community by means of *hartals*, i.e., withholding of service. These guilds differed from modern trade unions in that they did not consist of wage earners, were not open to members outside the particular castes concerned, and that they had no written rules or regulations. Their background was more social than industrial and they were a type of 'close trade unions'. Contact with the West and the gradual industrialisation of the country, however, introduced cleavages in the solidarity of the village communities and consequently into the homogeneity of the old craft guilds which began to disintegrate and disappear only to emerge later in a form more suited to modern industrialism.

The decade following the end of the World War witnessed rapid developments in the field of trade unionism in India, but it must be regretfully admitted that organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many of the other industrialised countries of the world. The reason for this can be put in a nutshell; lack of a will to organise as far as the workers are concerned and organised opposition to association by workmen from their employers. Such success as the movement has met with is due largely to a series of entirely fortuitous circumstances. The origin of the post-war movement is clearly traceable to the distant lag in wages behind prices and the consequential heavy fall in real wages. Large masses of ignorant and illiterate industrial

workers were compelled, through sheer inability to make ends meet, to strike work. After they had struck work they were unable to formulate their demands and to offer organised resistance without outside assistance. Here is where the outsider who had no knowledge of industry got his chance to step into the movement and to become a labour leader. Some of these labour leaders were men who had the good and welfare of labour genuinely at heart. But many went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere tub thumpers who liked hearing their own voices and who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would transport Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers constituted themselves into strike committees. These committees when they were first formed secured a considerable measure of success in so far as concessions in wage rates were concerned; but, whereas many of these self-appointed committees fell into a state of inanition on the conclusion of a dispute; a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginning of the trade union movement in India, and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of the memberships claimed by these earlier bodies, nothing definite can be stated with regard either to their number or to their total membership; but it can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments, among seamen and in the textile industry in Ahmedabad City, and in some other centres. If an estimate may be attempted, it would perhaps not be incorrect to say that at the beginning of the year 1924 there were about 150 unions in India with a total membership of about half a million workers.

The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the annual sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. These bodies received a

very generous measure of recognition both from the Railway Board and the Director General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mill workers in Bengal and four or five unions of textile workers in Bombay City, the trade union movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform. Another important reason, in the purely personal opinion of the compiler of this note, is the existence, in these industries, of the all-powerful jobber whose interests in the labour which he brings to his mill would be severely undermined if the workers began to feel that they were independent of him in the matter of the removal and redress of their minor grievances. It is true that the Bombay Girni Kamgar Union—a communist organisation formed at the commencement of the general strike of six months in the cotton mill industry in Bombay City in 1923—claimed a membership of over 50,000 at the end of that year, but this union lost its membership almost entirely after the disastrous general strike which it conducted in 1929. The latter strike killed the movement in the cotton mill industry in Bombay and although such of the existing unions as were left have been making frantic efforts to regain their hold on textile labour, they have entirely failed to do so and the present unions are carrying on a purely nominal existence with very small figures of membership. A third reason is organised opposition to trade unionism by employers and the victimisation of workmen who take the lead in trade union activities.

In an earlier section it was stated that had employers in Indian industry had the sagacity and the foresight towards the end and immediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure, the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical international conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representative of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to

the task of forming trade unions in the country. This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to be to combat trade unionism. Every possible move to frustrate combination by their workmen was adopted and where departmental orders against taking interest in trade union activities were disobeyed, the workmen concerned were either dismissed or, in cases where the larger organisations had other branches, were transferred to one or the other of such branches. Victimisation of the trade unionist, except in the city of Ahmedabad where a strong union had been formed in the spinning section of the cotton textile industry in that centre under the leadership of Mr. M. K. Gandhi whom the Ahmedabad millowners could not possibly displease on political grounds, was rampant. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of the outside agitator; and, unfortunately for Indian trade unionism, no body of outsiders versed in proper trade union methods and principles was available. Such outsiders as could collect some of the hot-heads among the workers in particular units or industries, formed unions in those units or industries; but again with the exception of Ahmedabad and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

As far as recognition by the employers was concerned, trade unions were faced with a three-edged weapon. On one side workmen taking interest in trade union activities were victimised; on another, the majority of the employers refused to recognise unions whose executives were composed of outsiders; and on the third, an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921, the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade

unions. Opposition to such a measure from associations of employers was, however, so great that it was five years before the necessary legislation could be placed on the Statute Book. The Indian Trade Unions Act was passed in March 1926 and was brought into operation with effect from 1st June 1927.

THE INDIAN TRADE UNIONS ACT, 1926.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926 makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations which a trade union is subject to after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers; and persons under the age of 15 are debarred from membership of any registered union.

Registration.—Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent. of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the local Government for the purpose; and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations Imposed on Registered Trade Unions.—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but, the Act makes provision for the creation of a separate political fund subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the

rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union.

Rights and Privileges of Registered Trade Unions.—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases. As this immunity is not enjoyed by unregistered trade unions, Mr. N. M. Joshi introduced a private Bill in the Legislative Assembly in 1927 to amend the Indian Penal Code with the object of protecting such unions from the law of criminal conspiracy. The Bill was circulated to the various Provincial Governments in India for opinion but was stoutly opposed, mainly on the grounds that it would discourage registration. The Government of India concurred with this view and as a result of Government opposition to it, the Bill was defeated on the 8th September 1928 on a motion for its reference to a Select Committee.

The administration of the Act is entirely on a provincial basis and each local Government is required to appoint a Registrar of Trade Unions. Unions are to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province. All provincial Governments are empowered to make rules for the manner in which the annual audit of registered unions should be carried out, for prescribing the forms and the manner in which unions may apply for registration and in which registered unions should forward the required notices, etc., to the Registrar, and for the fees payable for registration and inspection of the register and other documents pertaining to any registered union. Unlike the various other pieces of labour legislation in India which have been subjected to frequent revision, there has been no amendment of the Indian Trade Unions Act, except for a slight modification which was made in 1928 in Section 11 regarding appeals in order to clarify the provisions of that section, and the present law on the subject continues to remain the same as it was when that Act was first passed in 1926.

EXTENT OF REGISTRATIONS UNDER THE ACT.

Trade unions were at first slow to seek registration under the Act. There had been no prosecutions under the 1913 amendment of the Indian Penal Code for criminal conspiracy in the case of strikes conducted by unions since the Buckingham Mill case of 1920 and with the enjoyment of this immunity in practice, most of the existing unions thought that registration involved obligations *re* maintenance of proper books and accounts, audit and the submission of notices and statements of annual accounts and restrictions *re* the framing of rules in accordance

with the requirements of the Act and on expenditure which could be incurred which were too disproportionate in comparison with the rights and privileges which registration conferred. The impetus to registration however came from the employers who in many cases insisted on registration prior to recognition—in many cases even registration did not secure recognition—and the first organised move in this direction came from the railways and the Bombay Millowners' Association who, on the breaking out of the general strike in the Bombay cotton mills in April 1928, refused to enter into any negotiations except with the representatives of registered unions. The Bombay Textile Labour Union which had been formed in 1926 by Messrs. N. M. Joshi and R. R. Bakhale was among the first to seek registration under the new Act; but three other unions of cotton mill workers in Bombay City had not registered and these at once applied for registration as soon as the Bombay Millowners made registration a condition of recognition. After this, several unions

all over India sought registration under the Act, but in many cases registrations were short-lived because they had to be cancelled owing to failure to submit annual returns or for non-compliance with the other requirements of the Act. It is of interest to observe that the Ahmedabad Textile Labour Union which is the biggest and best organised trade union in India refrained, on purely political grounds, from registering until the end of 1935 and it only did so then on account of the probable decision of the Delimitation Committee to make registered textile unions in Ahmedabad as basic constituency for the return from that centre of labour representatives to the Bombay Legislative Assembly which would come into being as the result of the new Government of India Act of 1935. The following table shows the numbers of registered unions on all the provincial registers in British India at the end of each financial year together with the membership and income of those which furnished returns. The figures exclude cancellations of registration.

Registered Trade Unions in British India.

Year.	Number of registered trade unions.	Unions furnishing returns.		
		Number.	Membership.	Income.
				Rs. (In lakhs).
1927-28	29	28	100,619	1.64
1928-29	75	65	181,077	3.17
1929-30	104	90	242,355	4.33
1930-31	110	106	219,115	4.07
1931-32	131	121	235,603	4.78
1932-33	170	147	237,369	5.57
1933-34	191	160	208,071	5.03

The percentage of female membership in the above figures is very small indeed. In 1927-28 it was 1.106, in 1932-33 it was 5.090 and in 1933-34 only 2.999 or less than 1.5 per cent. of the total membership in that year. Out of the 191 registered unions on the 31st March 1934, 46 unions were in Bengal, 45 in the Bombay Presidency, 38 in the Madras Presidency and 23 in the Punjab. No other province had more than a dozen. Ajmer-Marwar had only one with a membership of 59. The figures given in the above table for membership and income are theoretical because they include persons who have not paid their subscriptions and income which has not been recovered. If the membership of 208,071 in the 160 unions which furnished returns for the year ending 31st March 1934 is analysed it is found that 93,682 were employed on railways and that 45,691 were seamen. The membership in 22 registered unions of textile workers was only a little over twenty thousand.

The Bombay Presidency is the only province in India which regularly collects information and statistics in connection with all trade unions. The following table shows the growth of the trade union movement in that province:—

Growth of Trade Unions in the Bombay Presidency.

Year.	Number of unions.	Membership.
1923	19	46,037
1926	56	74,875
1929	99	196,748
1930	93	128,393
1932	102	111,354
1935	128	111,891

If the figures contained in the above table for the year 1935 (1st December) are analysed by industries, the results are as set out below :—

Distribution of Membership of Bombay Unions.

Class of industry.	Number of unions.	Membership.	Percentage to total membership.
Textile	17	36,411	32.54
Seamen	3	25,568	22.85
Railways	12	22,302	19.93
Posts and Telegraphs	35	7,874	7.04
Municipal	9	3,821	3.42
Miscellaneous	52	15,915	14.22
Total ..	128	111,891	100.00

Of the 17 unions of textile workers with a membership of 36,411, six 'vertical' unions of cotton mill workers in Ahmedabad which are under the control of the Ahmedabad Textile Labour Union claim a membership of 25,164. Of the remaining unions, five with a total membership of only 9,575 are in Bombay City.

RECOMMENDATIONS OF THE ROYAL COMMISSION.

The recommendations made by the Royal Commission on Indian Labour in connection with the existing law relating to trade unions were as follows :—

(1) The Act should be re-examined in not more than three years' time and all limitations imposed on the activities of registered unions and their officers and members should be reconsidered so as to ensure that the conditions attached to registration are not such as to prevent any well conducted and *bona fide* union from applying for registration ;

(2) All unions should be able to secure, free of charge, the conduct of their audit by officials of Government ;

(3) Section 22 of the Act should be so amended as to provide that ordinarily not less than two-thirds of the officers of a registered trade union shall be actually engaged or employed in an industry with which the union is concerned ; and

(4) A registered trade union should not be precluded from initiating and conducting co-operative credit or supply societies.

The Government of India have not accepted the last recommendation and have deferred action on the first and the third. The second recommendation re. free official audit has been given effect to in some provinces but not in others.

THE PROGRESS OF THE TRADE

UNION MOVEMENT IN INDIA.

In the absence of any reliable statistics and information on the growth and activities of trade unions in India outside the Bombay Presidency, it has not been possible to deal with the development of the movement from an all-India point of view. The Labour Office of the Government of Bombay has collected full information re all trade unions in the Bombay Presidency once in every three months since the middle of 1922 and this information has been incorporated in Quarterly Reviews in the *Labour Gazette* published monthly by that office, but similar information is not available for the other provinces in India. Every province, however compiles an annual administration report on the working of the Indian Trade Unions Act, 1926, and the Government of India publishes a general report based on the information contained in the provincial reports. These reports are unfortunately confined only to questions in connection with the administration of the Act—numbers of registrations and cancellations of registration membership of registered unions and consolidated statements of their accounts—and they contain little, if any, information about the activities of the unions themselves.

We have so far dealt with the development of the trade union movement in India until the coming into operation of the Trade Unions Act. Up-to-date statistics based on such figures as are available have also been given. We shall now proceed to conclude this review with a rapid survey of the main events in the movement since 1927. The height of the movement was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in

Bombay City for their Bombay Girni Kamgar Union. The membership figures of the various other unions which they controlled also showed remarkable increases. Their main object in getting into the trade union movement, however, was to use it as a tool for the furtherance of their revolutionary principles and doctrines for the overthrow of the existing Government and the uprooting of capitalism. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil strike of the winter of that year were responsible for rioting in Bombay City on a scale previously unknown. Thirty-one of the ring-leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. This has been dealt with in an earlier section. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the whole of the blame for this unwarranted strike to the Bombay Girni Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it has not yet recovered. The workers were left thoroughly disillusioned and they lost all faith in the *bona fides* even of genuine trade unionism.

The communists not content with the mischief they had wrought in the ranks of individual trade unions made a successful attempt in 1929 either to capture or to break the All India Trade Union Congress. They affiliated the Bombay Girni Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at the tenth session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Randive broke away to form the All India Red Trade Union Congress. By this time, however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner of means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott

the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in India—(1) the communist group; (2) the liberal group; and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amalgamation was named the National Trades Union Federation. In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues.

ENFRANCHISEMENT OF LABOUR UNDER THE NEW CONSTITUTION.

The question of representation of labour in the central and provincial legislatures has in recent years assumed considerable importance owing to the growing interest taken by the general public in labour matters. Under the constitution established by the Government of India Act, 1919, both the Governor General and the provincial Governors had powers to make a certain number of nominations to the Central Legislative Assembly and to the Provincial Legislative Councils. The majority of such nominations were to be from the ranks of Government officials but both the Governor-General and the Provincial Governors were permitted to exercise their option in nominating persons from other outside interests in order to remedy

inequalities of representation. In pursuance of this power one nominated seat in the Legislative Assembly and one nominated seat in the Legislative Councils of Bengal and Bombay were reserved for representatives of labour. The Governors of Punjab, the Central Provinces, Bihar and Orissa and Assam followed suit and nominated one member each for labour interests in their respective Councils. A little later, the labour representation in Bengal was increased to two and in Bombay to three seats.

The question of the enfranchisement of labour under the new constitution has received considerable attention from every Commission and Committee appointed in connection with the reforms—(1) the Provincial Franchise Committees set up by the various Provincial Governments in India in 1931; (2) the Franchise Subcommittee of the Indian Round Table Conference; (3) the Indian Franchise Committee; (4) the Provincial Delimitation Committees set up by local Governments in India; and (5) the Indian Delimitation Committee set up in 1935 under the chairmanship of Sir Lawrie Hammond. Several alternative schemes of representation were considered. The Royal Commission on Indian Labour were of opinion that the method which was likely to be most effective in securing the best representation of labour was that of election by registered trade unions. The Indian Franchise Committee were, however, unable to accept trade unions as the sole basis of representation and they recommended representation through constituencies composed of registered trade unions and also through special labour constituencies composed of workers in factories employing a minimum of ten persons in selected areas and centres. On the basis of a combination of these two methods, the Committee recommended 38 seats for labour in the Provincial Legislatures—eight each for Bombay and Bengal, six for Madras, four each for Bihar and Orissa and Assam, three each for the United Provinces and the Punjab and two for the Central Provinces. With regard to the representation of labour in the Federal Assembly, the Indian Franchise Committee recommended that labour should get the same extent of representation as commerce, *viz.*, eight seats. Election should as far as possible be through registered trade unions except in the case of provinces such as Bengal and Assam where trade unions in the two chief industries of jute and tea are either too weak or non-existent. In such cases the method of representation should be considered at the time of the delimitation of constituencies. These various proposals were accepted by the Third Round Table Conference and by the Joint Select Committee of Parliament on Indian Constitutional Reforms with the exception of a slight reshuffling of seats consequent on the decision for the separation of Sind and Orissa. These two new provinces were to get one seat each at the expense of Bombay and Bihar and Orissa and the number of seats in the Federal Assembly was increased from eight to ten of which one was to be a non-provincial seat and the remaining nine to be distributed among the provinces, Bombay and Bengal getting two each and one seat each going to Madras, Bihar, the United Provinces, the Central Provinces and Assam.

The Indian Delimitation Committee, whose report was published in February 1936, have laid down the following requirements which a trade union should fulfil before it can be included in the electorate:—

(1) It should have been in existence for two years and have been registered for one year before the date fixed for the preparation of the electoral roll;

(2) Its membership should not have fallen below 250 during the year preceding the preparation of the electoral roll;

(3) It must have complied with any rules made under the Indian Trade Unions Act for the inspection of books by the Registrar and for professional audit; and

(4) Its fulfilment of the preceding conditions should have been attested by a tribunal to be appointed by the Governor.

The Committee further recommended that the Indian Trade Unions Act should be so amended as to invest local Governments with the power of inspecting the registers of registered trade unions and to make Government or professional audit of their accounts compulsory. As regards the qualifications of an elector in a labour constituency, the Committee recommended that (1) he must have attained the age of 21 years; (2) he has had a place of residence in the province for six months immediately preceding a date to be fixed by the local Government; (3) in the case of a trade union constituency, he belongs to a registered trade union included in the constituency and has paid up his subscription for the twelve months preceding the date of the preparation of the electoral roll; (4) in the case of a special labour constituency he has been in continuous employment in a factory or a mine for a period of not less than 180 days in the year preceding the date of preparation of the electoral roll; and (5) he is not employed in a clerical, supervisory, recruiting or administrative capacity. The qualifications laid down by the Committee for a candidate are that he should have attained the age of 25 years, satisfied the conditions laid down in the Fifth Schedule to the Government of India Act and that he should be an elector either in the constituency for which he stands or in any other labour constituency in the province concerned. As far as the method of election is concerned, the Indian Franchise Committee were of opinion that where a trade union constituency is confined to a single area voting might be direct but where it covers two or more different centres election should be through an electoral college composed of delegates elected in each union in the proportion of one for each group of 100 workers. The Indian Delimitation Committee were, however, strongly in favour of direct election, whether in trade union or in special labour constituencies, unless there are quite decisive practical difficulties in the way but they have favoured the principle of electoral colleges in the case of certain unions of railway workers.

As far as the actual constituencies for the Provincial Legislative Assemblies are concerned the Indian Delimitation Committee recommended that out of the eight seats given to labour in Bengal, two seats should be with trade union

constituencies for registered unions of railway and water transport workers and six for special labour constituencies as follows: Registered factories in Calcutta and suburbs, Howrah, Barrackpore and Hooghly (one seat each), one seat for coal mines in the Asansol sub-division of the Burdwan District and one seat for tea garden labour in the Jalpaiguri and the Darjeeling Districts. In the Bombay Presidency, Ahmedabad textile unions and railway unions in Bombay get two seats each, the Bombay textile unions and unions of seamen and dock workers get one seat each and textile labour in Sholapur City gets one seat on the basis of a special labour constituency. Of the six seats in Madras, all railway unions in the presidency and unions of textile workers in the Madras District get one seat each and the four remaining seats are divided between special labour and Malabar, of (1) textile workers in Coimbatore and Malabar, (2) Madras City dock and factory labour (excluding railways and textiles), (3) Vizagapatam dock and factory labour, and (4) West Godavari, Kistna and Guntur factory labour. In the United Provinces all registered trade unions get one seat and the two remaining seats are allocated to industrial factory labour in Cawnpore and industrial labour in Lucknow, Agra, Aligarh and Allahabad. In the Punjab, the North Western Railway Union gets one seat and the two remaining seats have been allocated to industrial labour in special labour constituencies composed of certain districts of East and North Punjab. In Bihar, registered mining unions in Dhanbad are allotted one seat and three go to special labour constituencies for (1) Janshepur factory labour, (2) Monghyr and Jamalpur factory labour, and (3) Hazaribag mining labour. In the Central Provinces, trade unions in Nagpur City get one seat and the remaining seat goes to a special labour constituency of industrial labour employed in certain areas in the rest of the provinces. The one seat in Orissa will be for a special constituency for the whole province and the allocation of the four seats in Assam will vary at successive elections between tea gardens in different districts. As far as representation in the Federal Assembly is concerned, the proposals vary between the allocation of the two seats for the Bombay Presidency between all registered unions in Bombay and Ahmedabad, to the Governor of the Province acting at his own discretion at each successive election in Assam.

THE FUTURE OF TRADE UNIONISM IN INDIA.

The proposals of the Indian Delimitation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Federal Assembly and to the Provincial Legislative Assemblies on the basis of registered trade unions are bound to have some effect on the formation of new unions and the registration of such of those as have not yet registered under the Indian Trade Unions Act. It is also probable that registered unions will make better endeavours than they have hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. At the same time, however, the

imposition of these further restrictions on the conduct of the affairs of registered trade unions might very well tend to dissuade several interested outsiders from continuing at the helm of affairs of their respective unions; and it is quite possible that in the absence of such leadership many unions will tend to disintegrate and disappear. As far as the workmen in Indian industries are concerned, trade unionism has not taken on anywhere near to the extent which it has with workmen in the West; and, as has already been stated above, the will to organise is unfortunately lacking. Things might have been different had the labour franchise been limited entirely to registered trade unions but in most provinces outside the Bombay Presidency the majority of the constituencies are special labour constituencies with which trade unions are in no way concerned. It is also very doubtful whether an Indian industrial worker will part with a monthly quota of his already meagre income for union subscriptions merely for the right of a vote. The experience of the last fifteen years shows that most of the unions which became defunct went to the wall owing mainly to the fact that their officials have not been able to collect the necessary subscriptions from the members for the reason that the India workman will not part with money for a purely problematic advantage. He wants a return for his outlay in the form of an increase in his wages and if he does not get this within a reasonable period he pays no union subscriptions. The Ahmedabad Textile Labour Union is, happily, in a somewhat different position because in addition to its having an excellent conciliation and arbitration machinery for the redress of minor grievances and the discussion of major issues, it provides a host of welfare schemes in the form of hospitals and dispensaries, education and facilities for recreation, co-operative stores and cheap grain shops, etc., and its members get more than value for their money. In addition, the union is under the control of extremely disinterested, able and zealous officials who have made the union their life-work. The office of the union with its hundred or more clerks is a beehive of industry.

Unfortunately for the trade union movement in India, there are few, if any, unions which are run on the model of the Ahmedabad Textile Labour Union. The vast majority of those which have been kept alive through the zeal of interested outsiders are hollow structures with no funds and bolstered figures of membership—bolstered in order to convince the employers concerned re. their *bona fides* for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the hollow structure which exists to-day. Whilst there are no indications for optimism there is, at the same time, no cause for pessimism in the matter, but the hopes of all persons interested in the welfare of the labour movement in India are, as far as trade unionism is concerned, in the laps of the Gods.

INDUSTRIAL DISPUTES AND TRADE DISPUTES LEGISLATION.

In the first part of this note on "Labour in India" in which we have given a complete survey of the growth of the labour problem in this country from its first beginnings in the seventies of the last century up to the present day we have dealt at some length with all the more important industrial disputes, and we have also given the findings and the recommendations of the various committees and departmental enquiries instituted in connection with them. We have also given statistics of industrial disputes in India during certain periods of intense industrial strife and we have traced the growth of conciliation and arbitration machinery culminating in the passing, by the Government of Bombay, of the Bombay Trade Disputes Conciliation Act of 1934. In view of this, there is very little left to be said in this particular section and our remarks will therefore be confined to a brief description of the Indian Trade Disputes Act, 1929 and to the all-India statistics of industrial disputes during the last fifteen years.

THE TRADE DISPUTES ACT, 1929.

With the exception of sections 1 and 2 which deal with short title, extent, duration, etc., and interpretations, and section 19 which deals with rule-making powers, the main body of the Trade Disputes Act, 1929, falls into three parts. The first provides for the appointment of Courts of Enquiry and Boards of Conciliation (sections 3 to 14); the second contains special provisions with regard to strikes in public utility services (section 15); and the third deals with illegal strikes and lockouts (sections 16 to 18). The first part of the Act relating to the establishment of tribunals for the investigation and settlement of trade disputes was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference is that whereas the British Act sets up a standing and permanent Industrial Court, the Conciliation Boards which the Indian Act makes provision for are intended to be appointed *ad hoc* like the Courts of Enquiry, in order to deal with particular disputes.

The Governor-General in Council, in the case of railways or concerns under the control of the Government of India; and the local Government, in the case of all other concerns or groups of concerns, have power to refer any matters appearing to be connected with or relevant to any trade dispute which exists or is apprehended between an employer and his workmen to a Court of Enquiry for report; or to refer the whole dispute to a Board of Conciliation for promoting a settlement thereof. Where no reference is made by either party or where a reference is made to Government by only one party, the appointment or otherwise of a Court or a Board is entirely at the discretion of Government; but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court

or a Board, as the case may be, provided that Government are satisfied that the persons applying represent the majority of each party. The objects of Courts of Enquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the dispute. Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board; but in practice both parties would be expected to do so.

The second part of the Act which covers public utility services makes it a penal offence for persons employed in such services to go on strike without giving fourteen days' notice in writing to the employer of their intention to do so. Penalties are also provided for persons abetting such an offence. This provision is based on the principle that persons whose work is vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time has been given to examine the merits of their grievances and to explore the possibilities of arriving at a settlement. Provisions of a somewhat similar type are also to be found in the Indian Post Offices Act and in a number of Municipal Acts in India; and the principle is one which has been widely accepted in other countries. Among "public utility services" have been included railways, postal, telegraph or telephone services; undertakings supplying light or water to the public; and any system of public conveyance or sanitation.

Clauses 16 to 18 of the Act relating to illegal strikes and lockouts closely follow the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927, but these provisions are only applicable in the case of those strikes and lockouts which satisfy both of two conditions: in the first place, the strike or lockout must have objects other than the mere furtherance of a trade dispute within the industry to which the strikers or employers belong; and, in the second place, the strike or lockout must be designed or calculated to inflict severe, general and prolonged hardship upon the community and thereby to compel Government to take or abstain from taking any particular line of action. Persons furthering illegal strikes or lockouts are liable to punishment while those refusing to take part in them are protected from trade union disabilities to which they might otherwise be subjected.

The life of the original Act was limited to five years but as a result of the recommendation made by the Royal Commission on Indian Labour in the matter an amending Act was passed in 1934 placing it permanently on the Statute Book. During the period of nearly seven years for which the Act has been in operation, it has only been made use of on four occasions: once by the Government of Bombay when they appointed a Court of Enquiry in the year 1929 to enquire into the general strike in cotton mills in Bombay City in that year, twice by the Government of India who appointed a Board of Conciliation in 1930 in connection with a dispute in the Bombay, Baroda and Central India Railway which arose over the question of the transfer of a number of workmen from the railway's workshops in Bombay to the new workshops which they were starting in Bohad, and another Court of Enquiry in 1931 to enquire into and report on the grievances of the large numbers of workers who were retrenched on all Indian railways during that year; and once by the Government of Burma. The Government of India are considering a further amendment of the Act in connection with the Royal Commission's recommendations for the establishment of permanent courts in place of the *ad hoc* tribunals which the Act at present provides for. With regard to action by provincial Governments, the Commission recommended that every local Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement. The Commissioner of Labour in Madras, the Director of Industries in the Punjab, the Director of Statistics and Labour Commissioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as conciliation officers. As has already been stated at the beginning of this section, events leading up to the passing of the Bombay Trade Disputes Conciliation Act in 1934 and the appointment of the Commissioner of Labour in the Bombay Presidency as the ex-officio Chief Conciliator have already been dealt with in the general survey. The scope of that Act has also been surveyed and statistics as to its working up to 31st March 1936 have been given. Reference has also been made elsewhere to the excellent private conciliation and

arbitration machinery which exists in the textile industry in Ahmedabad for the examination and settlement of all industrial disputes. It will be seen, therefore, that as in almost all the advanced industrial countries of the world, conciliation in India too has come to be regarded as a matter of first rate importance in the settlement of industrial disputes.

STATISTICS OF INDUSTRIAL DISPUTES.

Statistics of industrial disputes in India have only been collected since 1921. The following table sets out the number of disputes in each year since 1921, the number of persons affected by these disputes and the total time lost in man-days.

Industrial Disputes in India, 1921-34.

Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.
1921 ..	396	600,351	6,984,426
1922 ..	278	435,434	3,972,727
1923 ..	213	301,044	5,051,704
1924 ..	133	312,462	8,730,918
1925 ..	134	270,423	12,578,129
1926 ..	128	186,811	1,007,478
1927 ..	120	131,655	2,019,970
1928 ..	203	506,851	31,647,404
1929 ..	141	532,016	12,165,691
1930 ..	148	196,301	2,261,731
1931 ..	166	203,008	2,408,123
1932 ..	118	128,099	1,922,437
1933 ..	146	164,938	2,168,961
1934 ..	159	220,808	4,775,559

THE INTERNATIONAL LABOUR CONFERENCE.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, eighteen further sessions have been held till the end of the year 1935 and a total of forty-nine Conventions have been adopted. We give below, in serial order, the year and the place at which each of the nineteen sessions of the Conference were held, the composition of the delegations from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition of the delegations Government Delegates are

represented by the capital letter "G", Employers' Delegates by the letter "E" and Workers' Delegates by the letter "W". The names of the technical advisers to the Government, Employers' and Workers' Delegates have been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear alongside the titles, no action has been taken.

1st Session (Washington, 1919): Indian Delegation.—Government—Sir Atul Chatterjee and Sir Louis Kershaw; Employers—Sir Alexander Murray; Workers—Mr. N. M. Joshi.

Conventions.

1. Hours of Work (Industry)—(AB)
2. Unemployment—(AC)
3. Childbirth.
4. Night Work (Women)—(AB)
5. Minimum Age (Industry)—(D).
6. Night Work (Young Persons)—(AB)
White Phosphorus—(D).

2nd Session (Geneva, 1920): G—Sir Louis Kershaw and Capt. D. F. Vines; E—Seamen's Delegate—Mr. A. M. Mazarello.

Conventions.

7. Minimum Age (Sea)—(E).
8. Unemployment Indemnity (Shipwreck)—(E)
9. Placing of Seamen.

3rd Session (Geneva, 1921): G—Sir Atul Chatterjee and Mr. I. N. Gupta; E—Sir Nowroji Saklatvala; W—Mr. N. M. Joshi; Secretary—Mr. A. G. Clow.

Conventions.

10. Minimum Age (Agriculture).
11. Right of Association (Agriculture)—(AC).
12. Workmen's Compensation (Agriculture).
13. White Lead (Painting).
14. Weekly Rest (Industry)—(AB).
15. Minimum Age (Trimmers and Stokers)—(AB).
16. Medical Examination of Young Persons (Sea)—(AB).

4th Session (Geneva, 1922): G—Sir Bhupendra Basu and Sir Louis Kershaw; E—Sir Alfred Pickford; W—Mr. N. M. Joshi; Secretary—Mr. C. H. Silver.

5th Session (Geneva, 1923): G—Sir Dadiba M. Dalal and Sir Louis Kershaw; E—Sir Joseph Kay; W—Mr. K. C. Roy Chowdhury.

6th Session (Geneva, 1924): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Alexander Murray; W—Mr. Joseph Baptista.

7th Session (Geneva, 1925): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Thomas Smith; W—Mr. N. M. Joshi; Secretary—Mr. R. N. Gilchrist.

Conventions.

17. Workmen's Compensation (Accidents).
18. Workmen's Compensation (Occupational Disease)—(AC).
19. Equality of Treatment (Accident Compensation)—(AB).
20. Night Work (Bakeries).

8th Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. Lajpat Rai; Secretary—Mr. R. N. Gilchrist.

Conventions.

21. Inspection of Emigrants—(AC).
- 9th Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. M. Daud; Secretary—Mr. R. N. Gilchrist.

Conventions.

22. Seamen's Articles of Agreement—(AB).
23. Repatriation of Seamen.

10th Session (Geneva, 1927): G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr. E. P. Paranjpe (Substitute); E—Mr. G. D. Birla; W—Mr. V. V. Ghri; Secretary—Mr. S. Lall.

Conventions.

24. Sickness Insurance (Industry, etc.).
25. Sickness Insurance (Agriculture).

11th Session (Geneva, 1928): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. J. C. Walton (Substitute); E—Mr. Narottam Morarjee; W—Mr. Diwan Chaman Lall; Secretary—Dr. R. C. Rawley.

Conventions.

26. Minimum Wage Fixing Machinery.

12th Session (Geneva, 1929): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe, and Mr. A. G. Clow (Substitute); E—Mr. Kasturbhai Lalbhai; W—Mr. N. M. Joshi; Secretary—Mr. A. Dibdin.

Conventions.

27. Marking of Weight (Packages Transported by Vessels)—(AB).
28. Protection against Accidents (Dockers).

13th Session (Geneva, 1930): G—Sir Atul Chatterjee and Sir Geoffrey Corbett and Mr. G. W. A. Turner (Substitute); E—Mr. Jadunath Roy; W—Mr. M. Daud; Secretary—Mr. G. W. A. Turner.

14th Session (Geneva, 1930): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. A. Latiff (Substitute); E—Mr. A. L. Ojha; W—Mr. S. C. Joshi; Secretary—Mr. G. Graham Dixon.

Conventions.

29. Forced Labour.
30. Hours of Work (Commerce and Offices).

15th Session (Geneva, 1931): G—Sir Atul Chatterjee and Mr. A. G. Clow; E—Mr. Walchand Hirachand; W—Mr. R. R. Bakhale; Secretary—Mr. N. A. Mehran.

Conventions.

31. Hours of Work (Coal mines).

16th Session (Geneva, 1932): G—Sir Bhupendra Nath Mitra and Sir Atul Chatterjee; E—Mr. Shanmukham Chetti; W—Mr. Diwan Chaman Lall; Secretary—Mr. K. R. Menon.

Conventions.

32. Protection Against Accidents (Dockers) (Revised, 1932)—(D)

33. Minimum Age (Non-Industrial Employment).

17th Session (Geneva, 1933): G—Sir Atul Chatterjee and Mr. J. F. Gennings; E—Sir Phiroze C. Sethna; W—Mr. Aftab Ali; Secretary—Mr. K. R. Menon.

Conventions.

34. Fee-Charging Employment Agencies.
35. Old-Age Insurance (Industry, etc.).
36. Old-Age Insurance (Agriculture).
37. Invalidity Insurance (Industry, etc.).
38. Invalidity Insurance (Agriculture).
39. Survivors' Insurance (Industry, etc.).
40. Survivors' Insurance (Agriculture).

18th Session (Geneva, 1934): G—Sir Bhupendra Nath Mitra and Mr. A. G. Clow; E—Seth Kasturbhai Lalbhai; W—Mr. Jammadas M. Mehta; Secretary—Mr. A. Dibdin.

Conventions.

41. Night Work (Women) (Revised)—(A.D.).

42. Workmen's Compensation (Occupational Diseases) (Revised).

43. Sheet-Glass Works.

44. Unemployment Provision.

19th Session (Geneva, 1935): G—Sir Bhupendra Nath Mitra and Sir Joseph Blore; E—Mr. H. A. Laljee; W—Mr. V. M. Ramaswamy Mudaliar; Secretary—Mr. S. R. Zaman.

Conventions.

45. Underground Work (Women).

46. Hours of Work (Coal Mines) (Revised).

47. Forty-Hour Week.

48. Maintenance of Migrants, Pension rights.

49. Reduction of Hours of Work (Glass-Bottle Works).

A = Unconditional ratification.

B = Legislative or other measures passed since the adoption of the Convention.

C = Legislative or other measures anterior to the adoption of the Convention by the Conference.

D = Legislation passed.

E = Legislation in progress or in preparation.

GOVERNMENT ADMINISTRATION OF LABOUR QUESTIONS.

The central co-ordinating authority in India for questions connected with labour in most industries is the Department of Industries and Labour of the Government of India with a member of the Viceroy's Executive Council holding the portfolio. Questions connected with the labour employed in docks and the mercantile marine are dealt with by the Department of Commerce. All railway workshops and running sheds employing twenty or more persons are factories subject to the Indian Factories Act, the central executive authority for which is the Department of Industries and Labour; but, apart from the control which this Department and the Provincial Governments exercise over railway workshops and running sheds, all classes of railway labour are under the control of the Railway Board which is itself under the control of the Department of Commerce. Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' are central subjects whereas industrial matters included under the head 'factories' and 'welfare of labour' fall within the scope of the provincial legislatures and although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, the pledging of child labour, etc., falls on the local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution for the central Government to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the local Governments to labour measures on which their views have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the central legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control; and, secondly, these Acts in most cases reserve

certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India, however, has been to grant to the provinces as free a hand as possible in the administration of the various all-India Acts. The central Government in the Department of Industries and Labour however maintains control in connection with the Indian Mines Act.

Reference has already been made to the establishment by the Government of India of a special Labour Bureau in 1920 and to the abolition of this office in 1923 in pursuance of a recommendation made in the matter by the Indian Retrenchment Committee. The Department of Industries and Labour has, however, endeavoured to carry on as much as possible of the work of that Bureau but owing to its limitations in staff and personnel it is not in a position to initiate and conduct all-India enquiries into wages and conditions of employment in Indian industries. The present executive staff of the Department of Industries and Labour is as follows:—

Member-in-charge: The Honourable Sir FRANK NOYCE, K.C.S.I., C.B.E., I.C.S.

Secretary: The Honourable Mr. D. G. MITCHELL, C.S.I., C.I.E., I.C.S.

Joint Secretary: The Honourable Mr. A. G. CLOW, C.S.I., C.I.E., I.C.S.

Deputy Secretary: Mr. E. M. JENKINS, I.C.S.

Under Secretary: Mr. M. IKRAMULLAH, I.C.S.

BENGAL.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also of labour organisations. From time to time, as circumstances permitted, he was to conduct special

inquiries. He was, however, not provided with an adequate staff for the purpose. The Labour Intelligence Officer was also the Deputy Secretary to the Government of Bengal in the Commerce Department and after the coming into effect of the Indian Trade Unions Act, 1926, he was also appointed Registrar of Trade Unions. The Royal Commission on Indian Labour recommended that Bengal should have a properly staffed Labour Office on the same lines and with at least the same staff as the Labour Office of the Government of Bombay; but owing to financial stringency this has not yet been possible. A beginning has, however, been made by the creation of a special post of Labour Commissioner who is also to be the Registrar of Trade Unions. He has been given a sufficiently adequate staff to enable him to administer the different laws placed under his jurisdiction.

Labour Commissioner and Registrar of Trade Unions: R. N. GILCHRIST, Esq., C.I.E., I.E.S.

MADRAS.

The Government of Madras appointed a Labour Commissioner in the year 1920 to watch and study at all times the conditions of labour, particularly industrial labour, throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Commissioner, Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the office the conduct of periodic censuses into agricultural wages has, however, been placed in his hands.

Commissioner of Labour: T. G. RUTHERFORD, Esq., C.I.E., I.O.S. This officer is also Chief Inspector of Factories, Commissioner for Workmen's Compensation and Registrar of Trade Unions.

BOMBAY.

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their zealous and earnest solicitude for the welfare and well-being of the industrial labour employed in the province; and the real pioneer work in the field of labour information and statistics in India during the last fifteen years has been done by the **BOMBAY LABOUR OFFICE** which was established in 1921 by Lord Lloyd, then Governor of Bombay. In the Government resolution announcing the establishment of this office the following were declared to be its functions:—

“(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters;

“(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise; and

“(3) *Legislation and other matters relating to Labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws.”

When the Labour Office was first started it was placed in charge of a Director of Labour. The post of the Director of Labour, was, however, abolished in 1926 and the Labour Office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to “Commissioner of Labour and Director of Information.” With this change in designation the administrative control of the Factory and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. Under the Bombay Trade Disputes Act, 1934, the Commissioner of Labour has also been appointed ex-officio Chief Conciliator. In addition to the Commissioner there are four gazetted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth who is called the Labour Officer at Ahmedabad is stationed at that centre. There are also three full time lady Investigators but these are not gazetted appointments. The office staff contains two Statistical Superintendents, three senior clerks, twelve junior clerks; two stenographers, one typist, one cashier, one despatcher and one daftari. The activities of the office comprise (1) prices and cost of living, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the *Labour Gazette* and (12) library.

The *Labour Gazette* has been published monthly since September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic

conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India.

In the *Labour Gazette* statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for workmen's compensation, prosecutions under the Indian Factories Act, and the employment situation. A new working class cost of living index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur has also been published. Quarterly information is also collected with regard to all known trade unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months.

A substantial grant is allowed by the local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodicals received from Labour Ministries, and International and research organisations in various parts of the world.

The present staff of the Labour Office is as follows:—

Commissioner of Labour and Director of Information, Commissioner of Workmen's Compensation and Registrar of Trade Unions.—J. F. Gennings, Esq., C.B.E., Bar-at-Law, J.P.

Assistant Commissioners of Labour.—S. R. Deshpande, Esq., B. Litt. (Oxon.), N. A. Mehrban, Esq., B.A., F.S.S., and S. V. Joshi, Esq., B.A. (Cantab). Mr. Joshi is also Assistant to the Registrar of Trade Unions, Bombay Presidency.

Labour Officer at Ahmedabad.—A. S. Iyengar, Esq., B.A., LL.B.

CENTRAL PROVINCES.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions. The Factory Office is also under his general supervision. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the

interests of labour are considered by this Board, but the Board acts purely in an advisory capacity.

Director of Industries and Registrar of Trade Unions: G. S. Bhalja, Esq., I.C.S.

BURMA.

In Burma, a Labour Statistics Bureau with a special officer in charge was set up in 1926. This Bureau conducted an extensive investigation into the standard of life and the cost of living of the working classes in Rangoon in 1927 and the results of this enquiry were published in the form of a special report in 1928. As a measure of economy, the Labour Statistics Bureau was placed under the charge of the Chairman of the Rangoon Development Trust in 1935 and this officer was made an ex-officio Commissioner of Labour.

Commissioner of Labour: W. H. Payton, Esq., I.C.S.

UNITED PROVINCES.

In the United Provinces almost all department of the local Government dealt with various phases of questions connected with labour up to the end of 1934. Labour as such was with the Home Member, electricity was with the Finance Member, the factory inspection staff was under the control of the Director of Industries, boiler inspection was under the control of the Public Works Department. The Registrar of Co-operative Societies was appointed ex-officio Registrar of Trade Unions. In 1935, however a more unifying policy was adopted and the Director of Industries was appointed Director of Statistics and ex-officio Commissioner of Labour for the general administration of all questions connected with labour.

Director of Industries and Statistics: R. T. Shrivdasani, Esq., I.C.S.

OTHER PROVINCES.

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the local Government are not very actively interested in the special consideration of other labour questions. Labour conditions in Bihar, Orissa, Assam, Punjab and the North West Frontier Province are not considered such as to justify the appointment of labour Commissioners.

LABOUR LAWS IN INDIAN STATES.

Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the factory law in British India by establishing mills or factories in the territories of Indian States.

ROYAL COMMISSION'S RECOMMENDATIONS.

The Royal Commission on Indian Labour recommended that Labour Commissioners should be appointed both for the Central and in all the local Governments except Assam. Labour Commissioners should be selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour and should act as conciliation officers. Where there is danger of establishments being transferred to Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining States. The action taken by the various provinces on this recommendation has already been dealt with. The most important recommendation made by the Commission in connection with Government administration of matters connected with labour was, however, for the setting up of an Industrial Council which would enable representatives of employers of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy. It was suggested that the Council should meet annually and its president should be elected at each annual session. The secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals; (2) to promote a spirit of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters; (3) to advise Central and Provincial Governments on the framing of rules and regulations; and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research. On the 7th March 1935 Mr. P. N. Saprú moved a resolution in the Council of State urging the establishment of the Industrial Council on the lines suggested by the Commission. Mr. D. E. Mitchell speaking on behalf of Government expressed sympathy with the resolution. He did not deny that the creation of such an Industrial Council would be of

very great value but there was no great hurry for it. He quoted the Commission and said they were not for its immediate establishment. The situation had considerably altered since the recommendation had been made in 1931 and there was a possibility under the new constitution that labour would be decentralised. In that case there was the danger that legislation passed in autonomous provinces would come into conflict with the centre. In view of this he thought that the creation of such a Council at this stage was not desirable. The resolution on being put to the vote was negatived by 22 votes against and seven for.

LABOUR LEGISLATION UNDER THE NEW CONSTITUTION.

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters. For Indian States in which there was appreciable industrial development, the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. The whole question was discussed threadbare at the various Round Table Conferences which were held in London in connection with the new reforms and Mr. N. M. Joshi who represented the interests of Indian labour at these conferences pressed that as far as possible labour legislation should be a federal subject. Owing largely to Mr. Joshi's efforts the Joint Parliamentary Committee decided for concurrent legislation. The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures :-

- (1) Factories; regulation of the working of mines, but not including mineral development;
- (2) Welfare of labour; provident funds; employers' liability and workmen's compensation;
- (3) Trade Unions; industrial and labour disputes.

INDIAN TRAIN SERVICE.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow :—

	Miles.	1st Class.	2nd Class.
Delhi, B. B. & C. I. Railway, <i>via</i> new Nagda-Muttra direct route		Rs. a. p.	Rs. a. p.
Delhi, G. I. P. Railway, <i>via</i> Agra	865	88 4 0	44 2 0
Shalva, <i>via</i> Delhi	957	88 4 0	44 2 0
Calcutta, G. I. P., from Bombay, <i>via</i> Jubbulpore & Allahabad	1,220	132 14 0	67 2 0
Calcutta, G. I. P., from Bombay, <i>via</i> Nagpur	1,349	130 15 6	65 8 6
Madras, G. I. P., from Bombay, <i>via</i> Raichur.	1,223	123 1 6	61 9 0
Lahore, <i>via</i> Delhi	794	90 2 0	45 1 0
	1,162	120 13 0	60 6 0

CIVIL AVIATION.

The development of internal aviation services in India was first essayed by Lord (then Sir George) Lloyd, during his Governorship of Bombay (1918-23). Lord Lloyd succeeded in securing the inauguration of a postal mail service between Karachi and Bombay. This was carried in R.A.F. machines. The use of these aeroplanes complicated the matter from the outset. The service was not warmly supported by the public. The effort failed.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India, stimulated both Government and public opinion. India had become a party to the International Air Convention and under this was under a moral obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances had already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt.-Col. F. C. Sheldermine, O.B.E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for some time strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of civil

aviation in India was only a matter of time and their great desire was to prevent it following in the wake of the mercantile marine and the commissioned ranks of the army, in which Indians came to the fore under modern conditions only in time to be faced with competition by Britishers who were first in the field. The upshot of this agitation was an arrangement by which young Indians might be sent to England for training with a view to their future employment in the Civil Aviation Department as aerodrome officers, inspectors of aircraft and engines, etc. Eight lads were dispatched for the opening of this system. Others followed and results have been successful. These men are not trained primarily as commercial pilots, but a development of their training, if they show special aptitude and desire to adopt a pilot's career, is always in view. This is a wise precaution and some of them take pilot's certificates. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and a period of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course lasts for two years and three months, during which time the men receive scholarships amounting to £240 per annum. A condition of eligibility for these scholarships is that applicants must possess a B.Sc. degree in engineering or physics.

Eight Indians were trained as Government Scholars and are at present employed in the Civil Aviation Directorate. Of these, 6 are employed as Aerodrome Officers at Karachi, Allahabad, New Delhi, Calcutta, Akyab and Rangoon, the remaining two as Assistant Aircraft Inspectors at Karachi and Calcutta. In 1933, a further batch of 6 ground Engineers was sent to England for training in advance aeronautical engineering. One was to undergo a course in oxy-acetylene welding and of the remainder two were to be trained in aircraft and two in engine manufacture. The course is for a period of 2½ years.

Internal Air Services.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was, on 30th December 1929, extended to New Delhi, mails from and for Europe being carried to and for each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Postal Department of the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mails to and fro. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment, pending the development of a permanent scheme.

Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Sheldermine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bore for the institution of a weekly air-service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways, Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Government-owned services.

The arrival of acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy. The machine continued in their Excellencies' service until 1934, when a new up-to-date aeroplane was purchased for their use and their old one was sold to Indian National Airways, Ltd.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England Australia air service. A private company Indian Trans-Continental Airways, Ltd., was formed with rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways Ltd. 51 p.c.; Indian National Airways Ltd. 25 p.c.; and the Government of India 24 p.c. This Company operates jointly with Imperial Airways, a weekly service from Karachi to Singapore, where it now connects with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways Ltd. was established largely through the efforts of Mr. R. E. Grant Govan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India, they also instituted a weekly service from Lahore to Karachi, to link with Imperial Airways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935, owing to talk of public support.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi service. It now includes Hyderabad in its schedule. An extension of the service to Colombo is contemplated. Aerodromes for it in the extreme south of India are shortly to be organised and the Ceylon Government have recently provided one at Colombo.

In Burma, Irrawaddy Flotilla and Airways Ltd. operate a weekly service between Rangoon and Mandalay and hope to extend it to Moulmein and Tavoy.

From the beginning of 1935, the Imperial Airways London-Karachi service, and with it, the Trans-India service up to Calcutta and the feeder services Karachi-Lahore and Karachi-Bombay-Madras, have been operated twice weekly. Proposals for a further development of the trunk air line between England and Australia, across India, and for the carriage of all first class Mail matter by it at low charges are now on the tapis.

Instruction in Aviation.—Instruction in Aviation is given in India through Clubs founded for the purpose. There are eight of these. Above them is the Aero Club of India and Burma, Secretary, Mr. Southern. The Aero Club is wholly independent of Government, having financially supported by the other clubs and acts as a co-ordinating body for those clubs, taking up with Government points of interest to them all and so on. The eight instructional clubs are the Delhi Flying Club, Bombay Flying

Club, Bengal Flying Club, (Calcutta), U.P. Flying Club (Lucknow), Madras Flying Club, Madras, Northern India Flying Club (Lahore), Jhodpur Flying Club Karachi Aero Club. The eight instructional clubs are under the direct control of the director of Civil Aviation Indian National Airways, Ltd. have also established a Flying School in Rangoon for the training of pupils in aviation. The aeronautical Training Centre of India, Ltd., formed by a number of leading Indians, opened an extensive School at the Civil Aerodrome, New Delhi, in October 1935, for the training of aeronautical engineers. Capt. A. T. E. Eadon, formerly Assistant Director of Civil Aviation with the Government of India was appointed first Governor & Principal, with a staff of highly qualified directors, and at the beginning of 1936, workshops with the most modern equipment are in course of erection. The centre is for the accommodation of 80 students. Its training courses last four years. The cost to each student is about Rs. 6,000, including the fees for the whole course and keep.

The Club movement dates from March 1927, when, as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month Aero Club of India was formed, composed of about 40 members of the Assembly. Its first meeting was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

Legislation.—Air navigation in British India was till recently governed by the Indian Aircraft Act, 1911. It was found to be very much out of date in the force of the rapid development of aviation and in August 1934 the British Indian Central Legislature passed the Indian Aircraft Act, 1934, replacing the old Act and giving powers to the Government of India to make rules to meet modern developments and to enable them to implement the provisions of the International convention for the Regulation of Aerial Navigation, 1919, to which India is a party. During the same session, legislation (the Indian Carriage by Air Act) defining the law of Carriage by air in India was also carried out.

Indian Air Races.—The Government of India, in December, 1927, received from Sir Victor Sassoon, a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the Club's income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar

where no hangar was already available. These grants commenced as from the 1st April 1928 and were to continue for two years. The Club subvention terms, after extension, were revised by the Government of India late in 1935. Under the new terms the Aero Club of India receives nothing from Government. Each club receives a fixed subsidy of Rs. 12,000 a year if it maintains three machines, Rs. 10,000 for two machines or Rs. 8,000 for one machine, plus Rs. 300 for each 'A' pilot trained *ab initio* and Rs. 100 for each A license renewed. The maximum subsidy payable to any club is Rs. 20,000. The terms are for three years.

The first Indian air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willington) and the Countess of Willington, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December, 1934, to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now". The funds annually available to pay for the race are limited and as soon as the length of the race and the number of stops are increased the cost of organisation rapidly increases. The running of the first race cost Rs. 5,000 and that of the second Rs. 5,354. The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V. Sassoon to form an Irwin Flying Fund, for flying sport prizes. The Fund is held by a Trust, the members of which are the Director of Civil Aviation and the Chairman of the Aero Club.

The Club are holding in February, 1936, a two-day rare from Madras, via Bombay to New Delhi and at the time of writing nine entries had been received.

Director, Civil Aviation.—Mr. F. Tymms, C.I.E., M.O.

Deputy Director, Civil Aviation.—Mr. G. L. Gandy.

Chief Inspector of Aircraft.—Mr. A. S. Lane, M.B.E.

Engineer Officer I.—Capt. A. G. Wyatt, R.E.

Engineer Officer II.—Mr. H. J. Paterson, I.S.E.

THE SUEZ CANAL

Although the activity of production and international trade, after its slight increase of 1933, had remained since then practically stationary, the Canal traffic for the whole of last year exceeded that of 1933 by approximately 34 per cent. Owing to this shipping activity and in spite of the reduction in dues of 25 centimes put into force on April 1, 1934, the total transit receipts exceeded those of the previous year.

The canal traffic rose in 1934 to 5,663 transits, representing a net register tonnage of 31,751,000 tons. It thus exceeded in tonnage the result of 1930 and showed over 1933 an increase of 3.5 per cent.; so the recovery in traffic, which began to show itself during the third quarter of 1932, had continued. However, progress had not been so regular in 1934 as in 1933; the increase from the one year to the other had been far more important during the first six months, and had even been replaced in the fourth quarter by a slight set-back.

The weight of goods passing through the Canal amounted to 28,448,000 tons, exceeding the figure for 1933 by 5.7 per cent., but remained 17.6 per cent. below the maximum recorded in 1929.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft., making it 30 ft. English.

The maximum permissible draught of ships using the Canal was 24.4 feet in 1870; in 1890 ships drawing 25.4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth

of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. In June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the protection of the entry to the Canal were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 300 metres. The protection of the Channel is thus secured, and there is no need of any apprehension as to its future.

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd-Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravanserai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Marhatta campaigns; they are but one—the Marhattas—of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the "muezzin" announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharma, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse races, of absorbing subjects for study and

observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahseer in many rivers, the wily snipe on the jheels, the strong winged duck, the jinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Bergssohn as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the **Taj Mahal**. Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, *Ismad-ud-Daulah's Tomb*, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wonderful a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthral him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashmir Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbār.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firuzabad, Puarana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at Udaipur is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder

of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi via Bombay an interesting return trip can be made via Benares and Calcutta. Many visitors, however, enter India via Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the

Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya.

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreath in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archaeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythical hero of the Ramayana, the epic poem of the Hindus; but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency pay homage to the gallant band who held it during the Mutiny against terrific odds

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in

the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co., Messrs. Jeana & Co., Bombay, etc., and the Publicity Officers of all the more important Railways as well as the Manager, Indian Railways Publicity Bureau,

57, Haymarket, London, and the Resident Manager, Indian Railways Publicity Bureau, "Delhi House", 38 East 57th Street, New York, will work out tours to suit the convenience of individual parties. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass,

Kashmir and Mysore, but there are innumerable other places almost as well known containing sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Aya and Amarapura nearby are well worth a visit.

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

AGRA.—Cecil, Laurie's Great Northern, Imperial.

AHMEDABAD.—Grand.

ALLAHABAD.—Grand.

BANGALORE.—New Cubbon, West End, Lavelle's, Central.

BARODA.—The Guest House.

BENARES.—Clark's, de Paris.

N. B.—There are at present no Consuls for Costa Rica, Liberia, Salvador and Mexico at Calcutta. The Consulates for Guatemala and Chile have been abolished.

Air Routes.

Three Air Services pass from Europe through India and onwards to the East. Imperial Airways and K. L. M., maintain a regular bi-weekly service between Europe and India, and Air France maintains a regular weekly service between Europe and India. Imperial Airways Eastbound aircraft arrive at Karachi each Monday and Thursday, and Westbound aircraft depart from Karachi each Wednesday and Saturday.

2. K. L. M. Eastbound aircraft arrive at Karachi each Friday and Monday, and Westbound aircraft depart from Karachi each Saturday and Tuesday. The journey between Karachi and London by Imperial Airways is made in 5½ days, and the journey between Karachi and Amsterdam by K. L. M. is made in 2½ days.

3. Air France Eastbound aircraft arrive Karachi each Sunday, and Westbound aircraft depart from Karachi each Wednesday. The journey between Karachi and Paris by Air France is made in 4 days.

4. The particulars of fares, weight of baggage allowed and conditions of carriage may be obtained from any travel agent.

5. **Indian Air Services:**—There are two Companies operating scheduled air lines in India :

I Tata Son Ltd., and

II Indian National Airways, Ltd.

A. Tata Sons Limited (Aviation Department) of Bombay commenced operating a weekly airmail service in 1932 connecting at Karachi with Imperial Airways. The route is from Karachi *via* Ahmedabad, Bombay, Hyderabad (Deccan) to Madras. During the monsoon, June to September this service is operated *via* Poona instead of *via* Bombay owing to the fact that Juhu Aerodrome becomes unserviceable during the wet weather. From the 1st of January 1935 this service was duplicated and now runs bi-weekly. In 1935 Tata Sons Ltd. established a weekly service from Bombay *via* Goa, and Cannanore to Trivandrum. This service operates during the six winter months every year and closes during the monsoon. Both services carry mails and passengers. Negotiations between Tata Sons Ltd. and the Government for the establishment of a Madras-Colombo service are continuing and it is expected that this service will become established during 1936. The time tables are given below :—

B. Indian National Airways, Ltd. with headquarters at Delhi commenced operating in 1933. Regular services were established between Calcutta and Rangoon, Calcutta and Chittagong, and a daily service between Calcutta and Dacca. These services were closed owing to lack of support in 1935. In December 1934 Indian National Airways commenced operating a weekly service between Karachi and Lahore.

On the 1st of January 1935 this service was duplicated to connect with the duplicated Imperial Airways' services at Karachi, and the route now runs from Karachi *Via* Jacobabad, Multan to Lahore. Northbound aircraft leave Karachi each Sunday and Thursday and Southbound aircraft arrive Karachi each Sunday and Wednesday. Passengers and mails are carried. The time table is shown below:—

Foreign Consular Officers in India.

Corrected up to 31st January 1936.

Name.	Appointment.	Station.
Afghanistan.		
Sardar Salah-ud-Din Khan	Consul-General	Delhi.
Monsieur Abdur Rahman Khan	Consul	Bombay.
Monsieur Md. Shafi Khan	Do.	Karachi.
Argentine Republic.		
Vacant	Consul	Calcutta.
*Mr. C. C. Miller	Vice-Consul	Do.
Austria.		
*Sir Hormusjee Cowasjee Dinshaw, Kt., M.V.O., O.B.E. (on leave)	Consul	Aden.
*Mr. D. H. C. Dinshaw (acting)	Do.	Do.
*Mr. R. W. Plummer	Do.	Calcutta.
*Mr. C. N. Caroe (on leave)	Do.	Bombay.
*Mr. Paul Urban (Acting)	Do.	Do.
Belgium.		
Monsieur M. Ulser	Consul-General	Calcutta.
Monsieur T. J. Clement	Do.	Bombay.
*Mr. A. E. Adams	Consul	Aden.
*Mr. R. S. Larkin	Do.	Karachi.
Sir William Wright, O.B.E.	Do.	Madras.
*Mr. C. G. Wodehouse	Do.	Rangoon.
*Monsieur R. Beruck	Vice-Consul	Calcutta.
Monsieur Hipp-Cools	Do.	Bombay.
Bolivia.		
*Mr. B. Matthews	Consul-General	Calcutta.
*Mr. J. A. Johnston (on leave)	Consul	Rangoon.
*Mr. K. R. Binning (Acting on leave)	Do.	Do.
*Mr. G. Gauld (Acting)	Do.	Do.
Brazil.		
*Dr. Manoel Agostinho de Heredia	Consul	Bombay.
Mr. Fernando Menezes Braganca	Do.	Calcutta.
*Senhor Jaime N. Heredia	Vice-Consul	Bombay.
*Mr. H. V. Simmons (on leave)	Do.	Calcutta.
*Mr. C. F. Pyett	Do.	Rangoon.
*Mr. W. Smith Hepburn	Consular Agent	Do.
China.		
Mr. Chen Chang Loh	Consul-General	Calcutta.
Mr. Tsai Hsien-Chang	Consul	Rangoon.
Mr. Chang-pei Liang	Do.	Calcutta.
Mr. D. J. Lee	Vice-Consul	Bombay.
Colombia.		
*Mr. H. Aldridge	Consul	Calcutta.
Cuba.		
Monsieur F. Bonachea	Consul-General	Calcutta.
*Senor W. F. Pais	Consul	Bombay.

*Honorary.

Name.	Appointment.	Station.
Czechoslovak Republic.		
*Mr. Alexander Klander	Consul	Aden.
Dr. Peter Klemens	Do.	Bombay.
Mr. Josef Lusk	Do.	Calcutta.
Vacant	Do.	Karachi.
*Mr. G. S. Mahomed	Consular Agent	Bombay.
Denmark.		
*Mr. Stanley Nicholas Day	Consul	Aden.
*Mr. E. A. Thorstenson	Do.	Bombay
*Mr. A. L. B. Tucker	Do.	Calcutta.
*Mr. A. Hansen	Do.	Calicut.
*Mr. W. M. Browning	Do.	Madras.
*Mr. C. A. K. de Castonier	Do.	Rangoon.
*Mr. A. N. Wardley	Vice-Consul	Calcutta.
*Mr. G. N. R. Morgan	Do.	Karachi.
Dominica.		
*Dr. P. C. Sen	Consul	Calcutta.
Ecuador.		
*Mr. J. Morshead (Acting)	Consul	Calcutta.
Finland.		
*Mr. C. H. A. R. Hardcastle	Consul	Bombay.
*Mr. Carr Joakim	Vice-Consul	Rangoon.
*Mr. R. W. Plummer	Do.	Calcutta.
*Mr. C. G. Alexander	Do.	Madras.
France.

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order:—

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville), and the Park.

Kangra Valley.—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaul Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmasala and Kangra. The best hotels at Dalhousie are Stiffle's Grand View and the Arraunoor; and at Dharmasala the Switzer's.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can hire a houseboat and live on the River Jhelum. At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal. (7,000 ft.)—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor run. The Carlton is the principal hotel. There are also boarding houses.

Matheran. (2,500 ft.)—The nearest hill station to Bombay, ideal for walkers and any body wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahabaleshwar. (4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahabaleshwar. Mahabaleshwar is noted for its delightful vegetation; orchids and lilies bloom in April and May. Hotels:—Race View and Frederick.

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archaeological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu.

Murree. (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil and the Viewforth.

Mussoorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand, and the Savoy.

Naini Tal. (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metre-gauge railway. The Grand, Metropole and Royal are the best hotels.

Ootacamund.—Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Government Madras for six months of the year from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam Via Madras and thence by hill railway to Ootacamund. The principal hotels are the Savoy and Cecil.

Pachmar. (3,500 ft.)—Situated on a plateau in the Mahadeo Hills, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G. I. P. railway to Pipariya Via Jabulpore, and a two hours' motor journey. The best hotel on the Hill.

Simla. (7,000 ft.)—The summer headquarters of the Government of India, is situated on several small spurs of the lower Himalayas. Towards the end of September, and in October and November Simla enjoys the best climate in the world. Reached from Bombay by taking

G. I. P. or B. B. & C. I. train to Kalka and thence either by hill railway or motor. There are many good hotels and boarding houses. The leading hotels are the Cecil, Clarks, Corstorphans, Grand, Gables (at Mashobra) and Wildflower Hall (Mahasu).

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only one, Kamet (25,447 ft.), has been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlaglweit brothers, who in 1855 reached a height of 22,329 ft. on the Eastern Ibi Gamu, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,404 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and made attempts to climb Kangehenjan, 22,700 ft. and Panthuri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Sir Martin (now Lord) Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakoram and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase.—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Ghotias were trained for mountaineering and with the advent of first class portage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakoram and W. W.

Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas who got within a few feet of the top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kanchenjunga, Panthuri and Chomolungma and made expeditions to the Central Himalayas where, with Colonel H. T. Morhead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal, Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherer, ascended Trisul, 25,406 ft., which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,600 ft. was gained. Captain Morris Slingsby also attempted Kamet at this time.

Attempts on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 25,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepalside, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.) the highest mountain peak, though not the highest altitude ever reached by man.

Mount Everest.—A description of the attempts to climb **Mount Everest**, the highest mountain in the world, may be divided under three headings: the reconnaissance expedition of 1921; the first attempt in 1922, and the second

in 1924. A still further attempt is being made at the time of writing, in April, 1933.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,200 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. B. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 28,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. E. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An Everest Committee was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr. Hugh Rutledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in its members were Mr. F. S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene climbed Kamet with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd.

But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and falling to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters succeeded in reaching 21,000 feet. He then went on alone and nothing more has since been heard of him, until his body was discovered near the site of Camp 3, 21,000 feet, by Mr. E. E. Shipton's party in 1935.

Aerial Expedition.—An interesting aside to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydeedale chief pilot, Filt. Lt. A. McIntyre second pilot and Major P. T. Eherston, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition across Nepal territory to Mt. Everest, was taken and along this

good survey photographs as the somewhat poor visibility at the time of the flight, in April, permitted.

An interesting mountain flight of which details were published in 1933 was one from Raisalpur to Gilgit and back, undertaken by the R. A. F. at Raisalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Raisalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs. 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakiot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken.

The year 1932 saw a well organised expedition to **Mount Nanga Parbat**. It was conducted by Dr. Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merkl returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Frier and Sangster of the Indian Army as transport officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a rout during which no fewer than nine lives were lost. Herren Merkl, Welzenbach and Wloand and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten. One or two spent a week without food or shelter.

This is the worst Himalayan mountaineering disaster that has yet occurred.

Another expedition to the Karakoram took place in 1934 under the leadership of Dr. G. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party state it to be more than 1,000 feet higher.

In 1934 Messrs. R. E. Shipton and H. W. Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of **Nanda Devi**, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Rutledge. Messrs. Shipton and Tilman also crossed from Badrinath to Gangotri

via the Satopanth Pass and explored the head of the Gangotri glacier.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahigam in Kashmir.

Several expeditions have lately been made into the Himalayas by members of the Himalayan Club, especially expeditions into Sikkim by members of its Eastern Section.

In 1935 an attempt to scale a Peak 36,254,00 feet, in the western *Karakoram* was made by Lieut. J. Waller, Lieut. J. Hunt, Dr. J. S. Carslaw and W. R. Brotherhood, R.A.F. A series of blizzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In 1936 a *French Expedition* is planned to the Karakoram. Its principal object is said to be an attempt to climb the Hidden Peak, one of the great peaks near the head of the Baltoro Glacier.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr. E. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions; examination of alternative routes from the west: the trying out of new men for the summit attempt; physiological observations; a stereo-photogrammetric survey; examination of ice formations on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were ascended.

The 1936 Expedition is led by Mr. Hugh Rutledge. It includes three of the 1933 climbers—Messrs Shipton, Smythe and Wyn Harris and one of the 1933 Signals Officers, Lieut. Smith Wyndham. The party numbers 12 as against 16 in 1933 and of the climbing party of eight, six have Everest experience, only one Lieut. Gavin, being new to the Himalayas. The attack will be launched via Brigadier Norton's route and an additional camp is planned which, it is hoped, will be pitched at 27,800 feet. Some idea of the difficulty of the ascent may be gauged from the climbers' estimate of 10 hours to climb the last 1200 feet. It is likely that the first attempt will be made without oxygen apparatus. If this fails an attempt will be made using oxygen.

The Himalayan Club.—Was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the Hon'ble Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor-General. Its membership is over 350, including three lady members and its president is General Sir Kenneth Wigram. Major Gueterbock is Hon. Secretary.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, “to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country.”

The foundation stone of the new capital was laid by the King Emperor on December 16, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manured. It is not cluttered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgeon-General Sir C. P. Lukis, Mr. H. T. Keeling, O.S.I., A.M.I.C.E., and Major J. O. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that “the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site.”

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out,

which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina Hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1920. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Paharganj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,562, or a total of 412,831. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged “battle of the styles” over Delhi. Finally, to use the language of the architect, it has been the aim “to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India.

of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors after wards increased the amount, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature. The population of the new City is now about 80,000, practically all the building sites within it are taken up and the time for extending the layout has almost arrived.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new Secretariats, of

which the builders have already had to carry out the first section of the extension provided for in the architects' plans. The Members of H. E. the Viceroy's Executive Council including H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. It remains to be seen whether the consequent profit will exceed the additional general expense of keeping staff down in the heat. An early descent from Simla to New Delhi was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October. But various factors, including especially the increasing length of the winter Legislative Session are tending to override argument and make prolongation of the Delhi Season in the spring necessary.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvases, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones, and English artists living in India were barred from competition, the work being

strictly reserved to Indian artists. Numerous artists-submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work is continually progressing. Government, meanwhile, instituted a scheme for sending selected artists to Europe for finishing studies to enable them the better to join in the work, and this is in operation.

All-India War Memorial.—R. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931.

George V Memorial.—It was decided last cold weather to erect a memorial statue to His Late Majesty, King Emperor George V, in Princes' place the large park like area lying between the All-India War Memorial and the Purana Qila. The origin of this proposal was a movement started among the Ruling Princes, sometime previously, to erect a white memorial statue to His Majesty in the new city and this scheme had made considerable progress when His Majesty died. The matter was then considered in a broader light and in consultation between Their Highnesses and His Excellency the Earl of Willingdon. The Princes agreed to merge their scheme in a larger one for an All-India memorial to His Late Majesty. H. E. the Viceroy issued an appeal for subscriptions to the major scheme and he and Her Excellency the Countess of Willingdon opened the general subscription list with a donation of Rs. 5,000. Sir Edwin Lutyens was invited to submit a design for a memorial and His Excellency the Viceroy and the representatives of the Ruling Princes inspected Princes' place with a view to a statue being erected there and in particular had a temporary wooden structure erected so that they might judge how a statue of the same dimensions would appear from different viewpoints. The statue of His Late Majesty is to be in bronze and will show His Majesty seated under a lofty canopy.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still "under consideration." To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential **University of Delhi**, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University

by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundationstone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 the old Viceregal Lodge was allocated to it for its future home.

The new city was the scene of notable inauguration ceremonies in February, 1931. The first of these was the unveiling of four "**Dominion Columns**" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose. The second great ceremony was the inauguration of the **War Memorial**. This was performed in State by His Excellency the Viceroy in the presence of representatives of every unit of the army in India of the Royal Air Force and of a large concourse of official and other spectators. A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

City Extension.—The new city now, in the midst of its season, contains a population of approximately 80,000 the maximum number for which it was designed. Of the numerous Ruling Princes who were allotted sites for residence, very few have yet responded by building. Otherwise the available residential building space is almost covered and the time has come to consider and plan extensions of the city. The main direction for this is southward where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration. The New Delhi Civil Aerodrome lies immediately southward of the existing new City boundary on the southern side and H. E. the Earl of Willingdon in February 1933, opened alongside the high road there a fine new Willingdon Air Station, which is furnished with the most modern equipment for day and night flying.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, Esq., authorising him to "open a new Lodge in Bengal." Of his personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Olive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Blivitt, Commander of the "Admiral Watson," Indianman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752.

Three others were also established about 1756. In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1788, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quartermasters had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1838 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweeddale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1838, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whose nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umma has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of

Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first: the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

- 79 Lodges. Rt. Wor. Bro. Eric Studd, P.G.D., M.L.A., Dis. G. Master; Dy. D. G. M., Edward A. H. Blunt, C.I.E., O.B.E., I.C.S. P.G.D.; Assist. D. G. M., F. W. Hookenhull, P.G.D.

Madras.

- 35 Lodges. Dis. G. M., Rt. Wor. Bro. G. T. Boag, C.I.E., I.C.S., P.G.D.; Dy. D. G. M., Dewan Bahadur P. M. Sivagnanam Mudaliar, P.G.D.

Bombay.

- 51 Lodges D.G.M. Rt. Wor. Bro. W. A. C. Bromham, P.G.D.; Dy. D.G.M., R. H. Middleton.

Punjab.

- 34 Lodges. Rt. W. Bro. Rev. Canon G.D. Barne, M.A., C.I.E., O.B.E., V. D., Lord Bishop of Lahore, District Grand Master; H. L. O. Garrett P.G.D. Dy. D.G.M.

Burma.

- 20 Lodges. Rt. W. Bro. Dr. N. N. Parekh, P.G.D., District Grand Master, Jivanji Hormusji, C.I.E., I.S.O., P.A.G. Reg., Dy. D. G. M.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. Dr. Sir Temulji B. Nariman, Kt., is the present Incumbent of the office, and controls 75 Lodges. Under him the several districts are in charge of the following Grand Superintendents:—

(Office vacant at present) G. Supdt. Northern India.

G. Lindsay, G. Supdt., Central India.
Morley Williams, Supdt., Southern India.
W. G. McLean, G. Supdt., Eastern India.
F. B. Ady—Burma.

The Grand Secretary is R.W. Bro. Khan Bahadur J. C. Mistree, J. P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, viz., English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are eleven Lodges, 6 in Calcutta 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

- 31 Chapters. Grand Supdt. Most Ex. Comp. Eric Studd, M.L.A. (P. A. G. Soj.)

Madras.

- 19 Chapters. Grand Supdt. Most Excellent Comp. G. T. Boag, C.I.E., I.C.S.

Bombay.

- 26 Chapters. M. Ex. Comp. W. A. C. Bromham, Grand Superintendent.

Punjab.

- 22 Chapters. Most. Ex. Comp. Rev. Canon G. D. Barnes, C.I.E., O.B.E., V.D., Lord Bishop of Lahore, Grand Superintendent.

Burma.

- 7 Chapters. Most Ex. Comp. D. N. N. Parekh, Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. B. Camp. Sir Shapoorjee B. Billimoria, Kt., M.B.E., J.P., under whom there are about 32 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

- 24 Lodges. Rt. W. Bro. Eric Studd, P. G. M. O., District Grand Master.

Bombay.

- 18 Lodges. Rt. W. Bro. W. A. C. Bromham, P. G. D., District Grand Master.

Madras.

- 16 Lodges. Rt. Wor. Bro. George Townsend Roag, C.I.E., I.C.S., District Grand Master.

Punjab.

- 12 Lodges. Rt. W. Bro. Lt.-Col. H. L. O. Garrett, M.A., F.R.H.S., District Grand Master.

Burma.

- 5 Lodges. Rt. W. Bro. Nasarwanjee Nowrojee Farakh, M.D., District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, Nos. 80, 203, 207, 220, 232, 233, 298, 468, 474, 497 and 642, Bengal Dist.

R. A. Mariner, 72, 514, 662, Bombay, and 483, Jubbulpore, Bombay Dist.

R. A. Mariner, 61, 81, 82 and 106, Madras Dist.

R. A. Mariner, 98, 193, 219, 279, Punjab Dist.

Secret Monitor, 14, 21, 34, 37, 40 and 42, Madras. 23, 46, 58, 60, 63, 65, 70, Bombay.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of District Grand Secretaries are given below:—

D. G. S., Bengal.

H. W. Barker, P. D. G. W., (Madras), 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W., Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Burma.

H. Friedlander, D.G.S., E.C., Rangoon.

D. G. S., Madras.

S. T. Srinivasa Gopala Chari, P. A. G. Reg. Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, R.A.G., D.C., Freemasons' Hall, Lahore.

Scottish Constitution.—It has two Benevolent Funds known as, (1) Scottish Masonic Fund of Benevolence (India), and (2) Scottish Masonic Benevolent Association in India. For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangir C. Mistree, J.P., 17, Murzban Road, Bombay.

Office Bearers of the Grand Lodge A. S. F. I. for the year 1935-36 :—			
Dr. Sir Tejmulji B. Nariman, Kt., K.H., J.P.	Grand Master.	Dr. Sohan Singh, P. M. 1281.	Junior Grand Deacon.
D. W. Ditchburn, J.P., P.M. 490.	Grand Master Depute.	B. Shankar Rao, P. M. 1290.	Junior Grand Deacon.
The Hon'ble Mr. Justice Blackwell, P.M. 1041	Subs. Grand Master.	L. R. Rope, P. M. 1305	Junior Grand Deacon.
C. Lindsay, P. M. 783	Grand Supdt. of Central India.	H. W. Hassanally, P. M. 485.	Grand Architect.
Morley Williams, P. M. 568.	Grand Supdt. of Southern India.	W. E. Harris, P. M. 363	Asst. Grand Architect.
W. G. McLean, P. M. 1205.	Grand Supdt. of Eastern India.	J. J. Greenhalgh, P. M. 634	Asst. Grand Architect.
F. B. Ady, P. M. in 1377	Grand Supdt. of Burma.	D. G. Diwaker, P. M. 742.	Asst. Grand Architect.
I. H. Taunton, I.C.S., P.M. 742 & in 1041	Senior Grand Warden.	Nawab Syed Tajammul Hassan, R. W. M. 787	Asst. Grand Architect.

Scientific Surveys.

Zoological Survey of India.—It was established in 1910, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well known members as Anderson, Wood-Mason, Alcock and Annandale.

The Survey is unique and that all its officers are Indians. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum and an Anthropological work entitled "Anthropological Bulletins from the Zoological Survey of India".

Botanical Survey.—The Botanical Survey department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma, of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's area of distribution in Upper India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical fact of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, physiology, ecology, and histology of plant life—the work accomplished in pure botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough charts of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed

Major James Rennell the first Surveyor or General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of these which are carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for forty-one ports between Suez and Singapore.

The Magnetic survey;

Observation of the direction and force of gravity;

Astronomical observations to determine latitude, longitude and time;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have recently led to a consideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is concerned with the surface features, ground levels

and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905 however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing however to the war and more recent retrenchments only two-thirds of the programme had been completed by 1932, in spite of a reduction of scale for the less important areas.

Although new surveys covering from thirty to sixty thousand square miles—an area comparable to that of England—are carried out every year, the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures; such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but entered from outside information.

Owing to the serious financial situation in 1931, the establishment of the department was severely cut down and its annual expenditure halved, in consequence of which the modern survey of India cannot now be completed before 1950.

The obsolescence of the present series of modern maps of India is shown in the second index map at the end of this report.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys;

Riverin, irrigation, railway and city surveys;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers, lent in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun also carry out work for other Government departments, such as special maps, illustrations for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining a high standard of instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be imported from abroad.

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible encouragement and assistance, and the latest methods of mapping from photographs taken from the ground are being studied experimentally.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is by the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Shillong; Officer in charge, No. 6 (South India) Party, Bangalore; and Officer-in-Charge, No. 10 (Burma) Party, Maymyo.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress, till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous, meets in January each year. The proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interest, in the evenings public lectures are delivered.

The Indian Research Fund Association.—This Association, which is a much older body than the National Research Council in England, was constituted in 1911 with a sum of rupees five lakhs (£33,000) set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that, in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly, one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the co-ordinating agency for the research activities of the All-India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of Medical Research Workers is drawn from all parts of India and consists of experts in their particular lines of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommendations for the programme of the following year. The Advisory Board also meet in December and examine all the proposals for research work and recommend a scheme of research for the

guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the "Indian Journal of Medical Research," which has a wide international circulation. The Association also publishes "Indian Medical Research Memoirs," which are supplementary to the "Journal".

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The principal inquiries are the **Malaria Survey of India**, which is a Central organisation, located at Kasauli and Karnal, plague research at the Haffkine Institute, Bombay, kala-azar by a commission in Assam, bacteriophage by Dr. Asheshov at Patna, nutritional research by Colonel McCarrison at the Pasteur Institute, Coonoor, and indigenous drugs and drug addiction by Lt.-Col. Chopra at Calcutta.

The Malaria Survey of India, which now enjoys international recognition, is constantly called upon to advise as to the best methods for malaria prevention in India. As part of the activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the "Records of the Malaria Survey of India," of which up-to-date four number have been issued.

The programme for each year involves an expenditure of Rs. 10 lakhs or more and the institution of 40 or 50 investigations.

Geological Survey.—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are investigated and the results are published without delay and every endeavour is made to induce private firms to take up the exploitation of the minerals discovered. Collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range

which for hundreds of miles runs parallel to the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and foundations and the suitability of particular building stones for particular purposes. The Department with the supply of

is also often able to advise on problems concerning water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The investigation of earthquakes in India and of all meteorites which fall in India are part of the duties of the Department. The Geological Survey also undertakes the examination and identification, without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Paleontologia Indica. The Survey headquarters are in Calcutta.

Posts and Telegraphs

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Industries and Labour of the Government of India. For the efficient working of the Department a representative of the Finance Deptt.—the Financial Adviser, Posts and Telegraphs—has been attached to the office of the D. G. P. & T. The Financial Adviser not only controls the finances of the Dept. but also assists the D. G. generally in examining matters containing financial implications in which the former is assisted by the Deputy Director-General, Finance. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services), five (including one temporary) Asst. Deputy Director-General and one Personal Assistant to the Director-General.

For postal purposes, the Indian Empire is divided into nine circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta,

Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General, the Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster or a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate head-quarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1888, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The Inland Tariff (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
<i>Letters.</i>	Anna, Pies.		
Not exceeding one tola	1 0	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
And every additional tola	0 6		
<i>Book and pattern packets.</i>			
For the first five tolas or fraction thereof.	0 9		
For every additional five tolas, or fraction thereof, in excess of five tolas	0 6		

<i>Postcards.</i>	
Single 9 pies.	
Reply 1 anna 6 pies.	

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory).
Parcels not exceeding 800 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 4
For every additional 40 tolas or part of that weight	0 4

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not applicable to parcels for Ceylon and Portuguese India.

<i>Registration fee.</i>	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 3

<i>Ordinary Money Order fees.</i>	
On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 upto Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable.

Telegraphic money order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each inter-telegraphic money order.

In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary—Rs. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

<i>Insurance fees.</i>	A. p.
Where the value insured does not exceed Rs. 100	0 3
Where the value insured exceeds Rs. 100 but does not exceed Rs. 150	0 4
Where the value insured exceeds Rs. 150 but does not exceed Rs. 200	0 5
For every additional Rs. 100 or fraction thereof over Rs. 200 and upto Rs. 1,000	0 2
For every additional Rs. 100 or fraction thereof over Rs. 1,000	0 1

As regards Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except as indicated below), is as follows:—

<i>Letters.</i>	
To Great Britain and Northern Ireland, Egypt (including the Sudan) and all British Colonies, Dominions and possessions except Palestine and Transjordan.	2½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.
To other countries, colonies or places except to Ceylon and Portuguese India to which Indian inland rates apply.	3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single 2 annas.
 " Reply 4 annas.

Printed Papers.— $\frac{1}{2}$ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight.. .. $\frac{3}{4}$ annas.
 For every additional 2 ounces or part of that weight $\frac{1}{2}$ anna.

Samples.— $\frac{1}{2}$ annas for first 4 ounces and $\frac{1}{2}$ anna per 2 ounces thereafter.

Parcels.

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:—

- (i) Parcels not exceeding 20 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

	Via Gibraltar.	Over-land.
	R.s.a.p.	R.s.a.p.
For a parcel—		
Not over 3 lbs.	1 8 0	1 13 6
Over 3 lbs., but not over 7 lbs. 2 12 0	3 1 6	
" 7 " " 11 " 3 15 0	4 2 6	
" 11 " " 20 " 6 3 0	7 3 0	

These parcels are delivered by the post office and the postage paid carries them to destination.

- (ii) Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are forwarded from India through the medium of the P. & O. S. N. Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London; if addressed to any place beyond that radius, carrier's charges are levied from the addressee on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit beyond India, but must, if they contain coin, etc., be insured during transit in India. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers.—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs. or 20 lbs.

Limits of Size.

Letters.—35 inches in length, breadth and thickness taken together and 23 $\frac{1}{2}$ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers.—To Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 39 inches in length and 4 inches in diameter.

To all other destinations—35 inches in length, breadth and thickness taken together and 33 $\frac{1}{2}$ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong-kong, the Straits Settlements, the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 1 $\frac{1}{2}$ feet in length and 6 inches in diameter.

To all other destinations—35 inches in length, breadth and thickness taken together and 23 $\frac{1}{2}$ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

	R.s. a.
On any sum not exceeding Rs. 10	0 3
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 6
On any sum exceeding Rs. 25	0 6
For each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.	

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

	R.s. a.
On any sum not exceeding £1	0 4
" " exceeding £1 but not exceeding £2	0 7
" " " £2 " " £3	0 10
" " " £3 " " £4	0 13
" " " £4 " " £5	1 0
" " " £5	1 0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Insurance fees (for registered letters and parcels only).

Registration fee.

For each letter, post-card & packet of printed or business papers and samples .. 3 annas.

For insurance of letters and parcels to Ceylon and of letters to Portuguese India—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to British Somaliland, Mauritius, Seychelles or Zanzibar and parcels to Portuguese India.

Where the value insured does not exceed Rs. 180 4½

For every additional Rs. 180 or fraction thereof 4½

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £12 4½

For every additional £12 or fraction thereof 4½

Acknowledgement fee.—3 annas for each registered article.

Magnitude of business in Post Office.—At the close of 1934-35 there were 104,205 postal officials, 23,700 post offices, and 168,000 miles of mail lines. During the year, 1,144 million articles, including 42 million registered articles were posted; stamps worth Rs. 67.8 millions were sold for postal purposes: over 38.8 million money orders of the total value of Rs. 778 millions were issued, a sum of Rs. 187.8 millions was collected for tradesmen and others on V. P. articles; over 3.4 million insured articles valued at 1,007 millions of rupees were handled. Customs duty, aggregating about 7.7 million rupees was realised on parcels and letters from abroad pensions amounting to Rs. 16.6 millions were paid to Indian Military pensioners and 15,000 lbs. of quinine were sold to the public. On the 31st March 1935, there were 3,100,000 Savings Bank accounts with a total balance of Rs. 583 millions and 89,500 Postal Life Insurance policies with an aggregate assurance of Rs. 171.3 millions.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with one Personal Assistant. For traffic work there is a Deputy Director-General, with two Assistant officers. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the

engineering work is in charge of the Postmaster General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the circles are now controlled by the Postmasters-General.

There is also a Wireless Branch attached to the Director-General's office, which is in administrative control of all wireless work in the Department. The Director of Wireless is in charge of this branch and is assisted by two officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:—

For delivery
in India.
Private and State
Express, Ordinary

Rs. a. Rs. a.

1 2 0 9

0 2 0 1

Minimum charge 1 2 0 9

Each additional word over 8 0 2 0 1

For delivery in Lhasa (Tibet).		For delivery in Ceylon		The address is free.	
Private and State.		Private and State.		Foreign Tariff. —The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows:—

Urgent Telegrams—	
Rate double of ordinary rate.	

Daily Letter Telegrams—

Minimum charge for 25 words.

Code telegrams are accepted at 3/5 th of the ordinary rate (*Vide clause 425, P. & T. Guide.*)

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration Reply Paid, etc.

Full lists published in Posts and Telegraphs Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from Offices in India or Burma transmitted to ships at sea through the coast stations mentioned in the preceding paragraph:—

	Total charge per word.
Ordinary.	Code.
Rs. a.	Rs. a.

- | | | | | | |
|---|----|---|----|---|----|
| (1) All Government or Private Radio-telegrams, excepting those mentioned in (2) to (4) below | .. | 0 | 13 | 0 | 8 |
| (2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy | .. | 0 | 8 | 0 | 5 |
| (3) Radio-telegrams to Spanish or Swedish ships | .. | 0 | 12 | 0 | 7½ |

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in daily letter telegrams are Reply paid, Poste Re-

stante, Telegraph restante and telegraph redirection under orders of the addressee.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 107,556 miles of line including cable and 604,766 miles of wire including conductors respectively, on the 31st March 1935. The numbers of departmental telegraph offices were 257 and 100 (including 19 Radio offices), respectively, while the number of telegraph offices worked by the Post Office rose from 1,934 to 4,279.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1934-35.
Inland ..	{ Private ..	4,107,270	13,439,833
	{ State ..	860,382	831,009
	{ Press ..	35,910	649,289
Foreign ..	{ Private ..	735,079	2,178,146
	{ State ..	9,896	27,553
	{ Press ..	5,278	77,828
		<hr/> 5,754,415	<hr/> 17,206,058

The outturn of the workshops during 1934-35 represented a total value of Rs. 17,83,400.

Wireless.—The total number of departmental wireless stations open at the end of 1932-33 was thirty-four, viz., Akyab, Allahabad, Bassein, Bombay, Calcutta (two stations), Cheduba, Chittagong, Delhi, Diamond Island, Gaya, Jodhpur, Jutogh, Karachi (two stations), Lahore, Madras (3 stations), Nagpur, Ormara, Pashni, Peshawar, Port Blair, Quetta, Rangoon (4 stations), Sandheads (two pilot-vessels), Sandaway Tavoy and Victoria Point of which only Cheduba, Ormara, Pashni, Port Blair and Victoria Point booked telegrams direct from the public.

Seven of these stations were designated coast stations for communication with ships at sea and twelve worked as aeronautical stations in connection with regular air services.

The Duplex high-speed service between Rangoon and Madras continued to work satisfactorily. Bandot working replaced Wheatstone system during the year on this circuit.

Telephones.—On the 31st March 1935 the number of telephone exchanges established by the Department was 330 with 29,545 straight line connections and 3,783 extension telephones. Of these exchanges, 177 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 25 with 40,120 connections.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1935 was 18,205.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1934-35 was Rs. 35,86,000 and Rs. 17,18,44,000 respectively. The receipts for the year ended 31st March 1935 amounted to Rs. 11,19,87,000 and charges (including interest on capital outlay) of Rs. 10,81,93,000, the result being a net loss Rs. 37,94,000.

Sanitation.

The history of the sanitary departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated: the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 *et seq.*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed." He quoted, the remark of the Government of India in their Resolution of 1914 that "in the land of the ox cart one must not expect the pace of the motor car."

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health

matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fair way to maturing but that in other provinces "with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed." But, he says, "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems; amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention."

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 2½ times that of England and Wales and nearly 4½ times that of New Zealand. "The information furnished for the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-beri; of the way in which malaria, cholera, yellow fever, dengue, ankylotomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation." These observations are as true to-day as when they were written.

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report:—

Province.	Birth Rates (per mille).		Death Rates (per mille).	
	1933.	Previous 5 years.	1931.	Previous 5 years.
Delhi	44	46	32	31
Bengal	29	27	24	22
Bihar and Orissa	35	33	22	24

Mortality during 1933.

Chief Causes of Mortality.—There are three main classes of fatal diseases: specific fevers diseases affecting the abdominal organs, and lung diseases, intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1933:—

D—Deaths.

R—Ratio per mille.

Statistical health reports for all India are always inevitably submitted are belated owing to the number of provinces from which returns have to be collated.

The Public Health Commissioner in his most recently published annual report, which concerns the year 1933, brings to notice certain leading facts. He shows that live births registered throughout British India numbered 9,678,876 or 624,370 more than in 1932. Compared with 1932, the U.P. recorded an increase of 220,462 births, Bengal 145,610, Madras 76,864, B. & O. 74,652, Punjab 72,388. Birth rates were again calculated on the estimated female population of the child-bearing groups, 15-40 years. The figure was 176 per mille for British India in 1933 as against 166 in 1932. The only other countries having rates comparable with those of India are Roumania, Egypt and Japan.

In the Punjab, the district birth rates varied between 56 p.m. and 34 p.m.; in the U.P., between 54 and 24; in B. & O., between 48 and 27; in Bengal, between 42 and 22; in C. P., between 50 and 35; in Bombay Presidency, between 49 and 15; in Madras Presidency, between 44 and 30; in Assam, between 37 and 20; and in Burma, between 42 and 16.

Natural increases accruing from excess births over deaths for decennial periods from 1881 (since when registration of births has been carried out in all the Provinces) to 1930 and for individual from 1926 to 1933 are given in the following table:—

	Annual number of Births.	Birth rate p.m.	Annual number of deaths.	Death rate p.m.	Annual excess of births over deaths.
1871-1800	Not available	..	3,540,202	20
1881-1890	4,565,687	24	5,058,578	26	492,891
1891-1900	7,174,694	34	6,662,417	31	512,227
1901-1910	8,591,136	38	7,657,513	34	933,623
1911-1920	8,810,018	37	8,142,364	34	667,654
1921-1930	8,345,364	35	6,347,063	26	1,995,301
1926	8,395,679	35	6,460,610	27	1,935,069
1927	8,516,706	35	6,009,729	25	2,506,977
1928	8,882,573	37	6,180,114	26	2,702,459
1929	8,565,341	36	6,276,391	26	2,297,950
1930	8,690,714	36	6,483,449	27	2,207,265
1931	9,135,890	35	6,615,089	25	2,520,791
1932	9,054,506	34	5,805,666	22	3,248,840
1933	9,678,876	35	6,096,787	22	3,582,089

The birth rate exceeded the death rate in every province, the largest difference being in the U.P., where the birth rate exceeded the death rate by 20 per mille. Registered births in British India numbered 9,678,876 as against 5,805,666 in 1932.

Of the 6,096,787 registered deaths, nearly 27 per cent. occurred amongst infants under one year of age; 18 per cent amongst children between 1 and 5 years; and 5 per cent. amongst those between 5 and 10 years. In other words over 45 per cent. of the total deaths were of children below 5 years of age and over 50 per cent. were of children below 10 years. It is illuminating to compare the corresponding figures in England and Wales for the same year. During 1933 the deaths of children under 1 year were only 7.4 per cent. of the total deaths; those amongst children between 1 and 5 years were 3.1 per cent. of the total; and amongst children between 5 and 10 years they were only 1.4 per cent. of the total. These figures show that only 10.5 per cent., as compared with 45 per cent. in India, of the total deaths were among children under 5 years of age, and only 11.9 per cent., as compared with 50 per cent in India, were among children below 10 years. The Public Health Commissioner in commenting on the enormous loss of child life which these figures represent draws pointed attention to the great possibilities of attacking the problem of child mortality in various ways.

The Public Health Commissioner discussing the chief causes of mortality in India mentions that the Fevers group, no doubt including most of the deaths in which fever was a notable symptom of the fatal illness, is once more the

largest and comprises nearly 58 per cent. of the total deaths with a death rate of 12.9 p.m. He shows that the upward trend in plague mortality recorded in 1931-32 was not maintained, the total number of deaths in 1933 decreasing by 42,631. Over 12½ million diagnosed cases of malaria were treated in hospitals and dispensaries as compared with less than 11 million cases in 1932. One of the most interesting and important sections of the Public Health Commissioner's report deals with Tuberculosis. In this he says: "Tuberculosis is now almost certainly one of the main public health problems in India, ranking probably next to malaria in this respect. In fact, it may be regarded as an epidemic disease. Most western countries are said to have already passed through the epidemic stage—the peak of the epidemic in England was reached as far back as 1830,—but it is difficult to state exactly at what stage the disease now is in India. Some hold that the peak has not been reached; that India, is still in the early stages; and that the extent of tubercularisation of the population in India to-day is midway between that of the African races and the highly industrialised and unindustrialised European races. This view may or may not be correct but the fact remains that the disease is rampant. If one lays stress on the result obtained by the tuberculin test, the infection rate would seem to vary between 21 per cent. and 76 per cent. according to the density of population, giving an average of 46 per cent. The bad housing conditions, the congestion and overcrowding, the unhygienic habits and customs of the people and the increasing urbanisation and industrialisation are without doubt conditions which predispose to rapid spread of infection, but the increasing interest

In the disease, the earlier detection of cases and improved registration must be partly responsible for the increased figures. Social conditions, however, are pre-eminently suitable for spread of infection and the solution of the problem lies deep-rooted in the habits and customs of the people. No anti-tuberculosis campaign can hope to attain success if this fact is not constantly kept in mind. . . Notification of disease is an essential preliminary to any constructive measures for prevention and treatment and it is regrettable that little or no progress can be reported in this respect.

"The position in India is one of marked contrast to that in England. So far there is no Ministry of Health as such; there is no Central Board of Health; and there is no general Public Health Act under which tuberculosis and other regulations might be framed. . . Since public health and disease prevention are "transferred" subjects, no one general policy is followed in India in regard to the prevention of tuberculosis. The P. H. C. with the Government of India has neither direct nor indirect control and the different provinces plan independently where they plan at all. The only All-India Organization solely concerned with anti-tuberculosis work in India is the King George's Thanksgiving (Anti tuberculosis) Fund. This organization is ill-equipped financially and for this reason confines its activities mainly to propaganda work. The provincial municipal and other Acts do not include provisions for anti-tuberculosis work and will have to be amended before they can be made applicable; the position as regards rural areas is even worse."

A valuable section of the report deals with maternity mortality. It points out that the absence of accurate registration makes it impossible to ascertain the real degree of maternal mortality in India. Were the causes of death checked it would certainly be found that the cases of death due to child-birth were far higher than the figures indicated. "Some idea of the causes of death may be gathered from the

reports of certain hospitals for women summarised in the Journal of the Association for Medical Women in India (August 1934). The figures relate to the year 1933. The rate of death per 1,000 cases admitted in these hospitals was 24 p.m. That for the Government Hospital for Women and Children, Madras, was 22. For comparative purposes the statistics of the St. Mary's Hospital, Manchester, are shown along with these figures. The death rate in Manchester was 9 per thousand cases. The rate would naturally be less in England even among cases admitted to hospitals."

The report points out that what is significant is the cause of the great proportion of the deaths in India compared with those at Manchester for the deaths in India are in the majority of cases preventable and could be prevented if India had an adequate maternity service. In view of the absence of reliable statistics, it is impossible to state how many women in India die yearly during child-birth, but the report states that the number must be nearly one and a half lakhs. The mortality rate, says the report, is not likely to be reduced to any extent until maternity service is improved but over a space of time it is evident that slow progress has been made. Maternity homes, especially in Western India, are springing up. The number of women who go to them has greatly increased. The service of trained midwives are in greater demand in towns. But "it is urgently necessary to plan something for rural India, for approximately nine times as many children are born in villages as in towns in India."

The report points out that child welfare centres were started in India nearly 20 years ago and that they have now so greatly increased in number that the movement is thoroughly established and has come to be regarded as an essential part of health work. A rough computation of the number of health visitors working in India gives the figure at about 300—that is less than one per million of the population.

THE HEALTH OF THE BRITISH ARMY.

General Health statistics of the British Army in India during the year 1933.

1933	Average Strength.	Admissions.		Deaths.		Invalids sent Home.		Invalids Discharged in India.		Invalids finally discharged in United Kingdom.		Average Constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers ..	2,355	1,031	437.8	15	6.37	42	17.83	33.91	14.40

Others	2,432	..	47	..	51	66.02	..

Among officers of the British Army in India 437.8 per thousand of strength were admitted to hospital during the year compared with 465.2 in 1932. There were 15 deaths, giving a ratio of 0.37 per thousand, compared with 15 and 6.54 in 1932. The average constantly sick in hospital was 3391 or 14.40 per thousand of strength as compared with 18.88 in the preceding year. The total constantly sick, in hospital or out of hospital, on account of disease and injury was 33.91 or 14.40 per thousand compared with 16.88 per 1,000 in 1932.

Of British soldiers 33,528 or 608.6 per 1,000 were admitted to hospital compared with 581.5 in 1932 and 580.5 in 1913. There were 134 soldier deaths or 2.44 per thousand of the strength compared with 2.96 per thousand in 1932. The most important causes of mortality among soldiers were:—

Local injuries	29
Pneumonia	15
Enteric group of fevers	14
Heat stroke	9
Other general injuries	11

The number, sent home as invalids was 503 or 9.15 per thousand of the strength, compared with 409 or 7.39 per thousand in 1932.

Among women and children (British Other Ranks) 1,308 women or 313.2 per thousand of the strength were admitted to hospital compared with 1,262 or 292.3 per thousand in 1932. Of the children, 1,887 or 281.9 per thousand of the strength were admitted to hospital, compared with 1,999 or 299.1 in 1932.

The principal cause of admission to hospital troops was inflammation of the tonsils, of which there were 194 cases, diseases next in order being malaria with 170 cases, dysentery 146 inflammation of bronchi 129, diarrhoea 124.

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1932.

	Average strength.	Admissions.		Deaths.		Invalids sent to U. K.		Invalids discharged in India.		Average constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers	2,175	700	321.8	15	6.90	28	11.95	24	36
Indian Ranks	121,013	52,017	429.8	305	2.52	783	6.47	1,902	33
Followers	28,248	7,525	266.4	109	3.86	266	35
Others *	2,094	..	25	73

* Includes Reservists, Indian Territorial Force, Royal Indian Marine, Indian State Forces R. A. F., Civilians and Pensioners.

The admission rate of officers sick in hospital for 1932 was 321.8 per thousand of strength as compared with 367.4 in 1931. Among soldiers 52,017 or 429.8 per thousand of strength were, admitted to hospital, compared with 451.3 per

thousand in 1931. There was thus a decrease of 21.5 per thousand on the 1931 figures. The death rate among Indian soldiers during 1932 was 2.52 per thousand as against 2.96 per thousand in 1931.

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921, when a Census was made, leprosy was regarded as an *infirmity* like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that possibly a majority of this number were the begg- ing and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the

Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees

are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest :—

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregation is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible;

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be

concentrated upon the establishment of dispensaries to serve the following objects :—

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generations will become fewer.

The Governing Body of the Indian Council in their report for the year 1933, show that the Association's main work during the completed nine years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product during that period is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject."

There are now seventeen provincial branches, including one in Mysore State and each of them has established treatment centres for leprosy patients. In Assam, for instance, the number of clinics rose from 81 in 1932 to 145 at the end of 1933. Many clinics in different parts of India report absolute cures of the disease.

His Excellency the Viceroy is the President of the Indian Council, Maj. Gen. C. A. Sprawson, C.I.E., K.H.P., I.M.S., Director General of the F.M.S. the Chairman of the Governing Body, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Sir Ernest Burdon, Kt., C.S.I., C.I.E., the Honorary Treasurer.

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, renowned for its sufferings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr. MacCallen, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great **Blindness Belt**. According to the last census returns there are 480,000 totally blind persons in this population of more than 300 millions. That is an incidence of

1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Nasik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7; in Bijapur 2.6 as against 0.7; in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palanpur 7 per thousand was found. If, as is not unlikely, this sort of error of under-estimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired. The term "blindness" has a different interpretation in every country. In a report on the Prevention of Blindness, published by the League

of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses; or for illiterate, inability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. Recently the **All-India Blind Relief Association** has made an analysis of a very large number of patients attending its camps and dispensaries, and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

Associations known as "**Blind Relief**" Associations have been working for several years in Western India, in conjunction with Government hospitals, to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas. They

also work by means of trained village workers whose duty it is to find out the "hidden blind"; and get them to the medical centre for relief; to find out cases of small-pox (a constant source of blindness in children); to inspect new born children for the detection of ophthalmia neonatorum; to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown.

The All-India Blind Relief Association.—(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay, and has for its life President, Mr. C. G. Henderson (late I. C. S.) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Blindness, which has its head quarters in Paris and was formed on September 14th, 1929, under the auspices of the League of Red Cross Societies and the American Society for the Prevention of Blindness. The Organising Secretary is R. Crawford Hutchinson, The Town Hall, Bombay.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the large towns in India. The amalgamation of these two bodies which has taken place, forming the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the work. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces

differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoy in the Indian Army is being increasingly realised, and nowhere more than in the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres many of the assisted by the M. & C. W. Bureau Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish

at a later stage from the many ills that childhood is heir to in a land of great poverty, undernourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical super-

vision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act, of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.
2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.
3. Child welfare.
4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150, and anything between Rs. 1 and Rs. 5 annually or consolidated payment of Rs. 50. At the end of 1933 there were 12,500 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1931 the number of members was 252,941.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is Sir David Petrie, Kt., C.L.E., O.F.O., C.B.E., and the Organising Secretary, Miss Nora Hill, A.R.R.C.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1933, stood at a capital investment of the face value of approximately Rs. 87½ lakhs. The income derived from the capital of the Society, (which is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

ST. JOHN AMBULANCE ASSOCIATION.

(Indian Council.)

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:—

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room;

(c) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic;

(d) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps;

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 200,000 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and over 10,000 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1933 22,853 persons attended 1,538 courses of instruction in First Aid, Nursing Home, Home Hygiene and Sanitation and of these 13,957 qualified for the Association's

certificates: i.e., 12,869 in First Aid, 584 in Home Nursing, 451 in Hygiene and 53 in Sanitation. A new course, Domestic Hygiene and Mothercraft, introduced in 1932 has not made much headway. To popularise Home Nursing, and Domestic Hygiene and Mothercraft courses among young girls and women special propaganda was stated. Steps were taken during 1933 to arrange first aid courses for the personnel of flying clubs, but the response was poor.

The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5, and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions. The total income for 1933 was Rs. 17,897, a more or less normal figure. Management expenses amounted to Rs. 22,413. After adjusting assets and liabilities outstanding the revenue account for 1933 showed a loss of Rs. 8,805. The Council was able to carry on by taking a loan of Rs. 7,000 from the Indian Red Cross Society and by buying much less stores than it sold, the balance of stores stock thus being reduced by Rs. 11,000. The Council realises that the financial position and its maintenance by temporary expedients is unsatisfactory.

Their Excellencies the Viceroy and the Countess of Willingdon and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir David Petrie, Kt., C.I.E., C.V.O., C.B.E., is the Chairman, Miss Norah Hill, A.R.N.C., the General Secretary, and Sir Ernest Burdon Kt., C.S.I., C.I.E., I.C.S., the Honorary Treasurer.

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic "mental hospital" at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the Jails where, of course, no provision exists for any kind of treatment. According to the last Census (1931) out of a total popula-

tion of 352,837,778 (India and Burma) there are 120,804 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India.

INDIA.

Provinces, States and Agencies.	General population.			Insane population.
	Males.	Females.	Total.	Total.
British India	139,931,556	131,595,377	271,526,933	} 120,304
Indian States	41,897,367	39,413,478	81,310,845	
Total for all India ..	181,828,923	171,008,855	352,837,778	120,304

For the care of the 120,304 insanes of India and Burma there exists accommodation in mental hospitals for 9,244 hence only one person in eight out of the total insane population can obtain accommodation in institutions which exist

especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died :—

Provinces.	No. of Mental Hospitals.	Admitted and readmitted during the year	Total Population of Mental Hospitals.			Discharged cured.	Died.	Daily average.		Criminal Lunatics.
			Males.	Fe- males.	Total.			Strength.	Sick.	
Assam	1	66	410	95	505	21	47	438.47	59.35	246
Bihar and Orissa ..	2	364	1,535	398	1,933	206	53	1,604.49	74.68	614
United Provinces ..	3	779	1,561	412	1,973	174	106	1,274.83	155.03	425
Punjab	1	397	982	262	1,244	132	102	889.88	73.63	207
Central Provinces ..	1	87	389	95	484	33	19	410.96	20.37	135
Bombay	5	608	2,109	237	171	1,534.20	93.7	226
Madras	3	469	1,155	357	1,512	143	80	1,105.29	135.89	194
Burma	2	276	1,111	169	1,280	88	58	1,052.55	44.06	564
Total	18	3,048	11,040	..	636	8,305.67	656.71	2,601

It will be observed that there is now no mental hospital in Bengal. Insanes from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota-Nagpur. The so-called "Central" Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in British India and Burma lies with the Civil

Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches; it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women.

It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,44,306 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. The Countess of Willingdon, C.I., G.B.E. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary Dr. M. V. Webb, C.M.O., W.M.S., Red Cross Building, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General

of India. (b) Must be between the ages of twenty-four and thirty at entry. (c) She must be a first-class medical woman, i.e., she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act: but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of eight, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 200 to Rs. 300 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the eight members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who

have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. The fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director-General, Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70

nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination, and the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital,

Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road, South; Nurses' Academy, 6, Suburban Hospital Road; and Nurses' Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Goshia Hospital at Kilpauk, the Royapetta Hospital and the Ophthalmic Hospital, also the Lady Amphilh Nurses' Institute and the South Indian Nursing Association (now amalgamated). President, Her Excellency Lady Goshen. The Association has under its management—*The Lady Amphilh Nurses' Institute*, Western Castle, Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available. *The Lady Willington Nursing Home*, Western Castle, Mount Road, Madras, and *Nilgiri Nursing and Convalescent Home*, Ootacamund, for Medical, Surgical and Maternity cases. The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1880. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. This Association was incorporated under the Societies' Registration Act of 1880, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1933. Memorandum, Rules and By-laws of the Association were however revised brought into line with the

actual working of the Association. Towards the end of 1927, the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929.

Lady Minto's Indian Nursing Association.—In 1906 this Association was inaugurated, replacing the Punjab and Up-country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lytleton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project, and after much consideration and discussion with the Government of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Countess of Willington is President of the Central Committee in India.

Hon. Secretary: Malox F. M. Collins, R.A.M.C.
Chief Lady Superintendent: Miss G. Beckett. Address—Central Committee, L.M.I. N.A., Viceregal Lodge, Simla; and Red Cross Building, New Delhi.

Secretary, Home Committee: Miss M. E. Ray, R.R.C., 10, Witherly Mansions, Earls Court Sq.

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 172 including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

The Trained Nurses' Association of India.—Was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession; (b) to promote a sense of *esprit de corps* among all nurses; (c) to enable members to take counsel together on matters affecting their profession; (d) to elevate nursing education by obtaining a better class of candidates; (e) to raise the standard of training; (f) to strive to bring about a more uniform system of education, examination and certification for trained nurses, both Indian and European; and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League and the Midwives' Union. The official organ of the Association is called "The Nursing Journal of India". The Association has 800 members and 304 student nurses.

Patrons: H. E. The Countess of Willington, Simla; H. E. Lady Brabourne, Bombay and H. E. Lady Marjorie Erskine, Madras.

President: Miss M. E. Abram, S.R.N., Matron-Superintendent, Presidency General Hospital, Calcutta.

Vice-Presidents: Miss D. Chadwick, S.R.N., S.C.M., Matron-Superintendent, Government Hospital for Women and Children, Egmore, Madras; Miss A. Wilkinson, S.R.N., S.C.M., Matron, St. Stephen's Hospital, Delhi.

Secretary: Miss Diana Hartley, S.R.N., S.C.M., 1, Madavakkam Tank Road, Kilpauk, Madras.

THE WOMAN SUFFRAGE MOVEMENT.

Hon. Secretary and Treasurer: Miss Gadsden, General Hospital, Madras.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the *purdah*, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were

being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each elec-

tion, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The interment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we

urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Harabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the **Madras Legislative Council** to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted

in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men. Dr. (Mrs.) Muthulakshmi Reddi, the first woman member of the British Indian Legislature, has been able to introduce legislation to do away with the Devadasi service in the Hindu temples and the immoral traffic in women and children. She has also devoted her attention to the development of the education of girls and to the promotion of the health of mothers and children.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the Bombay Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Sahib Harlal Desai and Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujarati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The Bombay Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr. S. M. Bose, in the Bengal Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a bloc of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the Behar and Orissa Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal Vote.

In February, 1923, a world suffrage record was made by the unanimous vote of the United Provinces Legislative Council in favour of Woman Suffrage.

In 1926 the Punjab granted woman suffrage without a division, and in 1926 the Central Provinces.

The new Reform Bill for Burma has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the Mysore Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, Assam Provincial Council granted Woman Suffrage for its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1929 soon after the All-India Women's Educational Reform was held in Patna, the Legislative Council of Behar and Orissa gave women the right of voting, election and nomination to the Council on the same terms as men. Thus the whole of British India has now given to women equal political rights with men. The result has equally demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancore, Cochin and Rajkot are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonam Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years. Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament; and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputa- tion of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926, as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab followed its lead in August and October respectively. This enabled women to become members of the Councils which have been functioning since then. But the permission came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being DR. MUTHULAKSHMI AMMAL, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of DEPUTY PRESIDENT OF THE COUNCIL. Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All-India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and among the ladies who have identified themselves specially with the movement are Lady A. Bose, Lady T. Sadastvaier, the Begum of Cambay, Mrs. Sarojini Naidu, Mrs. Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinanajadasa, Mrs. M. E. Cousins, Mrs. Srinangamma, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Saraladevi Choudhuri, Mrs. Kumudini Basu, Mrs. K. N. Roy, Lady Shail, Mrs. Hassan Imam, Miss S. B. Das, Mrs. P. K. Sen, Mrs. Rustomji Faridooji, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Raschid, Mrs. van Gildemeester, etc.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and interesting buildings, in Finsbury Circus, provided by the

British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School provides teaching in more than seventy subjects. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the Schools to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is a whole time Professor in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Owing to the generosity of the Rockefeller Foundation a sub-department under Professor Lloyd James has been opened for the teaching of and research into African Linguistics.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures

to be given by distinguished orientlists not on the staff.

9. University Professor of Phonetics and Appointed Teacher.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant,

suspicious and prejudiced of the population, extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28, the fisher-population on the West coast totalled 114,502. The esteemed table fish of the coast consist of the Seer (*Ogibum* or *Scorpaenomorone*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), Jew fish (*Sciaenidae*), Whiting (*Sillago*), Thread-fish (*Polynemus*), Sardines (*Clupea*) and Mackerel (*Scomber*). In economic importance, however, shoaling fish and fish of inferior quality such as Sardine (*Clupea*), Mackerel (*Scomber*), Cat fish (*Arius*), Ribbon fish (*Trichiurus*), Goggles (*Caranx crumenophthalmus*) and Silver bellies (*Equula* and *Cuzza*) take precedence of the former. Sardine and Mackerel overshadow all others. So greatly in excess of food requirements are the catches of sardines, that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres: the material is largely cured for export.

The Madras Department of Fisheries.—As Government attention has been given in Madras over a longer period to the improve-

ment of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr. James Hornell, F.L.S., as Director and, is now controlled by his successor Dr. B. Sundara Raj, M.A., Ph.D. The activities of the Department have greatly expanded since its inception.

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. Twenty-four volumes have been issued to date and the twenty-fifth volume in Press. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 115 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1930-31 was Rs. 1,97,777-0-4 and expenditure Rs. 2,85,913-12-4.

Pearl and Chank Fisheries.—In the absence of the pearl fishery during the year, the chank fisheries prospered. An unprecedented number of 467,628 chanks were fished yielding a gross revenue of Rs. 17,860-8-8.

The Inland Fisheries.—The inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water; only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sportsman in India the "Mahseer," Cat-fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 7 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and *Etrophus suratensis* which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing a useful habit. Both the Gourami and *Etrophus* are largely vegetarian in diet. A further activity is represented by the breeding

of small fishes especially addicted to feed upon the aquatic larva of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public.

Deep Sea Fishing and Research.—The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms; and,
- (2) how to exploit these deep sea fisheries economically.

The department's trawler "Lady Goschen" has been exploring the off shore belt of the sea up to 100 fathoms from Point Calimere to Madras on the East Coast and Calicut to Pigeon Islands on the West Coast, with a view to ascertain the kinds and quantities of fish available there. The Assistant Biologist and staff worked on board the trawler. One remarkable discovery made by this systematic survey is that fish of better quality and in larger quantity are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands, during the months of the survey. Whether it is the case throughout the year is yet to be ascertained. However it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast, and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure.

Rural Pisciculture.—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds which number over 1,06,050 in the Presidency. The work though begun in July 1930, had already completed a survey of ponds in 98 villages, 2,173 wells and 264 ponds in these villages were examined and out of this number 175 wells and 85 ponds were selected as suitable for piscicultural operations and 45 wells and 1 pond were stocked.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On

Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1930-31 was 73.

The need for special efforts to promote co-operation among fishermen and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the *unmown* area occupied by inland waters—rivers, creeks, shoals, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the *hilsa* (*Clupea ilisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Catla catla*), *mrigela* (*Cirri uan nelgeto*); prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the *bekti* (*Late calarifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus*) pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Two industrial societies were started one at Bhangad and the other at Palapatty on the West Coast in 1927 with the object of wearing the fishermen gradually from the influence of middlemen capitalists. The Government sanctioned a loan of Rs. 1,500 each to the two societies for purchasing boats, nets and other accessories for fishing purposes. They are working since 1927 with varying degrees of success.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Challyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Departments. In other places schools were opened by the Department at the request of the fishermen. Local men are appointed as honorary manager of schools.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. There is no immediate prospect of reconstitution of the Department. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any

can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish bye-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated

to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of bye-products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

Vast strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progress is in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr. Sorley's more important recommendations are:—

1. The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does.
2. The establishment of a bureau of fisheries information.
3. The advisability of the transfer of the fish curing yards to the control of the Local Government; and
4. The encouragement by the Bombay University of marine biological research.

Mr. Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started.—A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay at Danda. The experiment was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R. I. M.) and suitable alterations were made on it to adapt it to the purpose of a carrier launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported in a much fresher state than had till then been

possible aroused the interest of the fishermen, who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Encouraged by the results, Government placed in 1934 an order for the construction of two launches with a local firm.

Fishermen who till now had felt that the provision of motor transport was beyond their scope are increasingly realising, after inquiry and inspection of the launches now running, that motor launches will play an important part in their trade in the future, and their more extended use will be the basis of any scheme for the improvement of their prospects. A spirit of enterprise is already abroad among the fishermen and some foresighted individuals encouraged by the success of the Bombay Government's experiment are now embarking upon the purchase of launches.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object that they may eventually be able to take charge of their own launches whenever they decide to go in for these on an extensive scale. The benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly a fisheries information bureau has also been set up. The function of this bureau will be to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not now available to them.

The more important sea-fish are pomfrets, sole and sea-perches among which are included the valuable Jew-fishes (*Sciaen* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "soundys," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and Jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seei (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are

employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

The provision of cold storage facilities in Bombay marks a new departure in the marketing of perishable products and commodities and is a sign that the Indian capitalist is developing a greater interest in fish than heretofore. These facilities have been mainly designed with a view to making a large supply of fish available in the Bombay market.

Inland Fisheries.—Government at the beginning of 1936 approved of a scheme for the development of inland fisheries in the Presidency. A start in the first instance will be made at Bandra, a suburb of Bombay, where two tanks have been obtained on loan from the Bandra Municipality for the purposes of the experiment.

The experiment will be extended to other parts of the Presidency in the light of the experience gained at Bandra. Government have sanctioned a sum of Rs. 10,000 for inland fisheries work.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soormai, shark, rays and Jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of oyster is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

The existence of small pearl fisheries almost within Bombay city itself, will come as a surprise to many. The fisheries dot Bombay City seacoast on its south-western and north-eastern sides. Apart from these two sites, pearl oyster fisheries are also to be found at Thana, a suburb of Bombay about 20 miles away, and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. The south-western site in Bombay City where pearl fisheries have been recently discovered is situated in blocks Nos. 3 to 7 of the Back Bay reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane oyster, but the pearls, apart from being limited in numbers, are of indifferent quality.

The revenue derived from the various pearl fisheries is meagre. They are not leased out regularly every year, but only when a sufficient number of pearl oysters subsist on the beds.

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster particularly certain areas in Sind and some sites in the Ratnagiri and Kanara districts. The best oysters by far are derived from the Sind oyster beds. Oysters found elsewhere in the Presidency are generally small and undersized.

In the Gulf of Cutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda.

The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territory in Kathiawar.

Burma.

Fresh, dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chiefly from Straits Settlements) was 12.56 lakhs in 1934-35. The exclusive right of fishing throughout the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue.—The economic value of any industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yielded a substantial revenue (about 41.41 lakhs *per annum* during the last decennium) and therefore they are one of the most important sources of national wealth. The demand declined to sixty per cent. of this amount in the year 1934-35 owing to trade and economic depression. Some open lakes, pools of water and small rivers are classed as leaseable fisheries and are leased by Government to the highest and best bidders at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,495 of which 1,070 lie in the Irrawaddy Division, and 607 in Maunabo—one of the five districts in that division.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north-east and west; in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

Licenses for fishing in all open fisheries are issued annually to persons who pay the prescribed fees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearl industry carried on, but leases for collecting green snails and sea slugs are issued.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkayan, (2) Kathabaung, (3) Kathalmyin and (4) Kabatu. These are generally made into salt fish. The creek and fresh water fish from fisheries are generally *ngakhu*, *ngayan* and *ngagyi*. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally *ngathalauk*, *Ngayyin* and *Ngamyinyin*. *Kakalaung* and *Ngaponna* which are found in small quantities elsewhere in India are sold in abundance in the Rangoon market.

The Punjab.

During the year 1934-35 there was no marked change in the operations of the Fisheries Branch of the Agricultural Department. The activities of the Fishing Section were limited mainly to the issue of licenses and the discouragement of poaching. The number of fishing licenses issued rose from 7,192 in the previous year to 7,544 during the year 1934-35.

The catches of the fishermen were generally below average except in the Kangra District where they were satisfactory on the whole. Weather conditions were not favorable and winter rains were late and deficient. Heavy mortality among fish in the Leh and Sohan streams in the Rawalpindi District which occurred on 25th June 1934, adversely affected the fishing in those waters in subsequent months. An analysis of the water showed that the discharge from the Murree Brewery and Sewage from Rawalpindi were the main cause of this mortality. Efforts were made to adopt remedial measures in consultation with the Director of

Public Health, Punjab. The biggest fish caught in the Beas River in Kangra during the year was a Mahseer of 49 lbs. in weight.

The trout fishing on the Beas and its tributaries in Kulu appears to be increasing in popularity. Two hundred and twelve Trout Angling licenses were issued in Kulu trout waters as against 134 in the previous year. The rivers remained full during most of the fishing season and the Anglers satisfied with the sport they got. As usual the mortality among Rainbow ova taken from the fish in the Hatchery was higher than in the case of Brown Trout. The cause is still under investigation. "Fin-rot" disease again broke out among the Rainbow trout in the Hatchery in June, 1934. The carp at Chenawan did not spawn during the spawning season 1934. Larval fish are flourishing. They spawned at the Chenawan farm and in the Botanical Experimental tanks at Lyallpur and were supplied during the year to a number of centres for the control of malaria.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan and America the Department has already accomplished a notable amount of development work and a scheme for further development is being worked out. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies

among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. A cold storage plant will shortly be erected in Trivandrum for freezing and preserving fish. Special Schools have been opened for the education of fisher lads.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1930 was 249,710 square miles or 22·6 of the

total area. This was classed as follows: Reserved 107,753; Protected 6,263; Unclassed State 135,694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

(1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moisture parts of Burma and are characterized by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*); towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoraceae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera jomoe*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer in its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial changes.—Apart from territorial changes there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules, 1928:—

- (a) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council.
- (b) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor-General in Council
- (c) by direct appointment of persons selected in India otherwise than by competitive examination;
- (d) by the promotion on the recommendation of local Governments of members of the Provincial Forest Services;
- (e) by the transfer of promotion of an officer belonging to a branch of Government Service in India other than Provincial Forest Service.

Further recruitment to the Indian Forest Service, whether by promotion or direct appointment, has been suspended until a decision is reached on the recommendation of the Services Sub-Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service.

In Bombay and Burma, where Forest is a transferred subject new services called the Bombay and Burma Forest Services Class I, have been created to take the place of the Indian Forest Service.

(2) **The Indian Forest Engineering Service.**—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The future strength is not expected to remain at more than three i.e. (one each in Bombay, Madras and Punjab).

(3) **The Provincial Service.**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Indian Forest Service in 1920. The class of Extra Deputy Conservators has been abolished and the service now consists of Extra

Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion upto 25 per cent. of the posts in the Indian Forest Service in provinces other than Bombay and Burma, such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their recruitment being a matter for the local Governments. A certain number of posts in the service are filled by the promotion of specially promising Rangers. Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926, the Provincial Service course ceased to exist from 1928. The I. F. S. College has also closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras), the Burma Forest School at Pyinmana (for Burma), and the Madras Forest College at Coimbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912, respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Bardsley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, is under the administrative control of the Inspector-General of Forests who is also the President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. The Timber Testing expert is engaged temporarily on short term contract. Indian Assistants have been appointed to receive the necessary technical training and experience with the object of eventually taking the place of experts if and when properly qualified. The Wood Technology, Paper Pulp Wood Preservation and Seasoning Sections are in charge of Indian experts who have received special training in their various subjects in Europe and America.

As a result of Mr. R. S. Pearson's long and able administration of the Forest Economic Branch, the Government of India now have at

Dehra Dun a series of forest workshops and experimental laboratories without parallel anywhere else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the unending stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their efficiency is of a very high order.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests. Unfortunately the need for retrenchment in all Government activities has stopped or curtailed many promising lines of investigation.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral product etc. The average annual output of timber and fuel from all sources averages about 350 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The provincial Government after this experience adopted a more cautious policy.

An important measure for the development of forests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods. American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide-spread depression in the timber trade the employment of mechanical methods for the extraction of timber had to be suspended. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are regarded as on the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized.

It accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of woodcutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged working up the raw products. Among these latter may be mentioned carpenters, wheel-wrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue amounts to some Rs. 8 crores a year. Surplus revenue amounts to upwards of 40 per cent of gross revenue. Most of the provinces show a steady increase of surplus.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level, because, according to the official explanation, "the intense conservatism in English timber trade and the difficulty of obtaining a footing for little known timbers have combined to make satisfactory sales very difficult".

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U. P.

* Excludes Delhi Province and the British Pargana of Manpur (Central India).

† Unclassified state forests or public forest lands as they are often called, include in many provinces all unoccupied waste, often entirely devoid of trees. So the statistics do not necessarily represent the wooded area.

(a) Includes 60,615 square miles for Federated Shan States.

(b) Excluding figures for Shan States and Karenni.

(c) Includes Rs. 13,055 on account of receipts under the head Forest Research Institute and College (Rs. 6,06,945).

(d) Includes expenditure under heads Imperial (Rs. 46,067), Forest Research Institute and College (Rs. 6,06,945).

(e) After taking into account deficits under Imperial (Rs. 46,067), Forest Research Institute and College (Rs. 6,06,945).

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the New Imperial and International Communications Ltd.

For reasons of economy, most of the inland wireless stations in India were practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashgar in China, and Jutogh Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. New wireless stations for aeronautical purposes have been erected at Jodhpur in Bikaner, and Gaya. The wireless installations at Karachi and Calcutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes are under construction at Chittagong, Akyab, Sandoway and Bassein.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high-speed continuous wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay station known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and total many thousands per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) via Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula via Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In March 1931, telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the s.s. *Belgenland* a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea.—A noticeable feature of wireless development during recent years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All Ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea. An elaborate system of radio services in connection with Civil aviation has been developed.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

Bombay broadcasts normally on a wavelength of 350.9 metres, and Calcutta on 370.4 and 40.10 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed.

Indian State Broadcasting Service.—The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon. Sir Frank Noyce) and upon it sit at the present time Messrs. N. B. Macbeth and N. M. Dumasia, Bombay; H. H. Reylands and K. C. Neogy, M.L.A., Calcutta; M. R. Coburn, Financial Adviser to Government in the Posts and Telegraphs Department and B. Rama Rao, Joint Secretary to Government in the Industries and Labour Dept.

Government, availing themselves of an improvement in their financial condition, in 1934-35 decided upon a large development of their broadcasting service and allocated substantial funds for the purpose. A special inducement for the expansion of broadcasting was the constant growth of revenue from Customs duties on imports of wireless material. This showed on the one hand a widespread desire on the part of the public for further broadcasting services and on the other hand a prospect of substantial profits to Government through the increase of imports of wireless apparatus.

The first important development ordered by Government was the opening of a high-power medium-wave broadcasting station at Delhi. This station was actually opened on 1st January 1936. Its wave length is 240.186 metres (VUD, 882 kc/s). The length is somewhat

inconveniently close to that of Bombay, but at the time when the station was erected it was believed to be the best length of medium-wave for transmissions in India. It was therefore appropriated for the first high power station to be built. Provision was made for its alteration if a change were later found to be desirable.

The Government of India decided to appoint a Director of Broadcasting in India and in their search for the best person for this appointment secured from the British Broadcasting Corporation Mr. Lionel Fielden, who took up his duties in 1935 and was largely instrumental in the initial organization of the new Delhi station.

Government, in announcing determination to open a large broadcasting station in Delhi, intimated that they proposed to follow this by the installation of modern high-power transmission equipments in place of the existing plants in Bombay and Calcutta and that a similar modern station would be opened in Madras. The thorough investigation of general broadcasting problems throughout India which followed the arrival of Mr. Fielden led to a revision of these plans. Mr. Fielden quickly became conscious of the need for highly expert technical advice and through his instrumentality the British Broadcasting Corporation lent India in the early months of 1936 the services of their Chief Technical adviser, Mr. H. L. Kirke.

Mr. Kirke toured extensively in India. His report was not published when this account of the situation was written, but several of his recommendations were permitted to become known. It appears that he is against the enhancement of the power of the Bombay and Calcutta stations, on the ground that of the increased reception radius which would thereby be created half would be over the sea and the greater part of the remainder over country which is very sparsely populated. He also held that it would be unfair to devote time and money to the development of these two stations while large parts of India have no station at all.

Mr. Kirke recommended the reaction of an experimental shortwave station in Delhi and the organization of wireless research work, especially in connection with and through the instrumentality of the universities.

His Excellency the Marquess of Linlithgow, immediately after taking the oath of office as Viceroy in New Delhi on 18th April 1936, proceeded to deliver a broadcast address to the Princes and people of India. This remarkable innovation in procedure is regarded as indicating His Excellency's enthusiasm for wireless and to portend that he will show considerable interest in its development.

Licenses.—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, several hundred have been issued.

The number of traders in wireless apparatus who are required to take out special Import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Radio Telephone Service.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, the then Governor of Bombay, and Sir Samuel Hoare, the then Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for several years by the Indian Radio and Cable Communications Company between India and the United Kingdom and India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world.

Similarly, there is a gradual extension of the area covered in India, and when the improvement of the landlines has been completed, nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner can use the service for an overseas call. Before doing so however, he has to place a deposit with the Telegraph Authorities.

The charge for a 3 minutes' conversation to (a) places in England, Scotland and Wales is Rs. 80; (b) Northern Ireland (Dublin) and the Isle of Man, Rs. 84. Each additional minute's conversation to places under (a) will cost Rs. 26-11 and to (b) Rs. 28.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs. 1,000 no probate duty is payable; up to Rs. 9,000 in excess of first Rs. 1,000 the duty is at 2%, between Rs. 10,000 and Rs. 50,000 the duty payable is at 3% and between Rs. 50,000 and 1,00,000 the duty payable is at 4% and over Rs. 1,00,000 the duty payable is at 5%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

1. Debts left by the deceased including mortgage encumbrances.

2. The amount of funeral expenses.

3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stooqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Sir Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending:—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) *The Press and Registration of Books Act* and the Post Office Act should be amended where necessary to meet the conclusion noted below: (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (e) any person challenging the orders of Government should do so in the local High Court; (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months; (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks:—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1802 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1802 to 1876. In 1802 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve-Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India:—Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Governor-General in Council may by notification in the Gazette of India appoint, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of:—

- (a) the presidents, vice-presidents and the secretaries of the Local Boards;
- (b) one person elected from amongst the members by each Local Board;
- (c) a Managing Director and a Deputy Managing Director appointed by the Central Board;
- (d) not more than two non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Governor-General in Council shall nominate an officer of Government to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11½ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,47,50,000 and the Balance Sheet of 31st December 1935 showed the deposits at Rs. 79,00,10,810, and Cash Rs. 19,58,64,414 with a percentage of cash to liabilities of 24.76.

Agreement with Reserve Bank of India:—The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are:—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act 1934, and there is no branch of the Banking Department of the Reserve Bank of India.

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent. on the first 250 crores and 1/32 per cent. on the remainder of the total of the receipts and disbursements dealt with annually on account of Government. As for the remaining five years the remuneration

to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation.

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments :—

- (a) during the first five years of this agreement Rs. 9 lacs per annum ;
- (b) during the next five years of the agreement Rs. 6 lacs per annum ; and
- (c) during the next five years of the agreement Rs. 4 lacs per annum.

In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

(1) Advancing money upon the security of:—

- (a) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India.
- (b) Securities issued by State aided Railways, notified by the Governor-General-in-Council
- (c) Debentures, or other securities issued under Act, by, or on behalf of, a district or municipal board or under the authority of any State in India.
- (d) Debentures of companies with limited liability registered in India or elsewhere.
- (e) Goods, or documents of title thereto, deposited with, or assigned to the Bank.
- (f) Goods hypothecated to the Bank against advances.
- (g) Accepted Bills of Exchange or Promises.
- (h) Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g.'

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases.

(3) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities.

(4) Investing the Bank's funds in the securities referred to in (1) a, b, c and d.

(5) Making, issuing and circulating of bank post-bills and letters of credit to order or otherwise than to the bearer on demand.

(6) Buying and selling gold and silver.

(7) Receiving deposits.

(8) Receiving securities for safe custody.

(9) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims.

(10) Transacting agency business on commission and the entering into of contracts of indemnity, suretyship or guarantee.

(11) Acting as Administrator, for winding up estates.

(12) Drawing bills of exchange and granting letters of credit payable out of India.

(13) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases.

(14) Borrowing money upon security of assets of the Bank.

(15) Subsidizing the pension funds of the Presidency Banks; and

(16) Generally, the doing of the various kinds of business including foreign exchange business.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance:—

- (a) For a longer period than six months except as provided in clauses 2 and 13 above;
- (b) upon the security of stock or shares of the Bank;
- (c) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons of firms unconnected with each other in general partnership.

The Balance Sheet of the Bank as at 31st December 1935 was as follows :—

Reserve Bank.—The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 6th March 1931 and the Bank began to function from 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. From July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs. 100 each, fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi, Madras and Rangoon.

Management.—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of:—

(a) A Governor and two Deputy Governors appointed by the Governor-General in Council after consideration of the recommendations made by the Board.

Four Directors nominated by the Governor-General in Council.

(c) Eight Directors elected on behalf of the shareholders on the various registers.

(d) One Government official nominated by the Governor-General in Council.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Governor-General in Council may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

Business which the Bank may transact.—The Bank is authorised to carry on and transact the following commercial business, viz:—The accepting of money on deposit without interest; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and

promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Governor-General in Council and to Local Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Governor-General in Council or any Local Government or State in India for the purchase and sale of gold and silver; for the purchase, sale, transfer and custody of bills of exchange, securities or shares; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The sole right to issue bank notes in British India is vested in the Reserve Bank and at the commencement the Bank shall issue currency notes of the Government of India supplied to it by the Governor-General in Council and on and from the date of such transfer the Governor-General in Council shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1s. 5 40-64d. and not higher than 1s. 6 3-16d. respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The Bank shall create an Agricultural Credit Department.

The full text of the Reserve Bank Act is reproduced elsewhere in the Year Book.

The Balance Sheet of the Bank as at 31st December 1935 was as follows :—

Governor.—Sir Osborne A. Smith, Kt., C.I.E.

Director Nominated under Section 8 (1) (d).—J. W. Kelly, Esq., C.I.E., Controller of the Currency.

Deputy Governors.—Sir James B. Taylor, Kt., C.I.E.; Captain Sir Sikander Hyat-Khan, K.B.E.

Directors Nominated under Section 8 (1) (b).—Sir Homi Mehta, Kt., Bombay; A. A. Bruce, Esq., Rangoon; Lala Shri Ram, Delhi; Khan Bahadur Adam Hajee Mohammad Sait, Madras.

Directors Elected under Section 8 (1) (c).—Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., Bombay Register.

Directors Nominated under Section 15 (3).—Sir Edward Bonthall, Kt., Calcutta Register; Rai Bahadur Sir Badridas Goenka, Kt., C.I.E. Calcutta Register; Khan Bahadur Syed Marati Ali, C.B.E., Delhi Register; Sir Sundar Singh Majithia, K.C.I.E., Delhi Register; Dewan Bahadur Sir Mocherla Ramachandra Rao, Kt., Madras Register; U. Po. Byaw, Esq., Rangoon Register.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

TOTAL DEPOSITS OF ALL EXCHANGE BANKS
SECURED IN INDIA.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawers of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets latest available of the under-noted Banks will give some idea of this:—

LIABILITY OF BILLS OF EXCHANGE RE-
DISCOUNTED AND STILL CURRENT.

Chartered Bank of India, Australia and China	£	2,535,000
Eastern Bank, Ltd.	..	466,000
Hongkong and Shanghai Banking Corporation	..	1,952,000
Mercantile Bank of India, Ltd.	..	2,290,000
National Bank of India, Ltd.	..	2,167,000
P. & O. Banking Corporation, Ltd.	..	1,452,000
		10,862,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London

discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as it appears from the latest available Balance sheets:—

In Thousands of £.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsound character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events confidence has been largely restored. But in April 1923 the Alliance Bank of Simla failed. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shown that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or $1\frac{1}{2}\%$, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanias having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of India until the 4th of July 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only

and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is some times nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates since the Imperial Bank was constituted:—

Year.	1st Half-year.	2nd Half-year.	Yearly average.
1927	6 508	4 956	5 732
1928	6 945	5 456	6 2
1929	6 878	5 788	6 333
1930	6 508	5 277	5 892
1931	6 735	7 353	7 044
1932	6 022	4 033	5 027
1933	3 627	3 5	3 563
1934	3 5	3 5	3 5
1935	3 5	3 5	3 5

The Reserve Bank announced the first official Bank Rate on the 4th of July 1935 of $8\frac{1}{2}\%$, which was reduced to 3% , on the 28th of November 1935 and it remained at this rate for the remainder of the year.

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, Reserve Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Reserve Bank at Calcutta, Bombay, Madras and Rangoon and by the Imperial Bank at Colombo and Karachi and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver

all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below:—

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (33 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22½ to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 he deficit on the Railway budget was Rs. 166½

lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87); the Southern Mahratta (1882); and the Assam Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt; the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 4½ were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnal and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantel, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates

terms being found unattractive in view of the competition of 4 per cent. trustee stocks; they were revised in 1898 to provide for an absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to $3\frac{1}{2}$ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to $3\frac{1}{2}$ per cent. and of rebate from $3\frac{1}{2}$ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Burma and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic de-

velopment of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the un wisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis; led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £813,000 in 1922-23.

The results in succeeding years will be seen from the following statements:—

—	Contribution to General Revenues.	Railway Reserve Fund.	Total Gain.
	£	£	£
1923-24 ..	4,941,387	4,635,985	9,577,372
1924-25 ..	4,135,644	2,854,936	6,990,580
1925-26 ..	4,486,045	1,108,433	5,594,478
1926-27 ..	4,707,239	3,460,000	8,167,239
1927-28 ..	3,933,834	1,937,895	5,871,729
1928-29 ..	4,588,950	1,561,650	6,027,300
1929-30 ..	4,801,775	8,192,625	3,890,850
1931-32 ..	4,020,150	—	6,900,000
192-23 ..	*	—	—
1933-34 ..	—	—	—
1934-35 ..	—	—	—

* The contribution to General Revenues due for the year 1932-33 amounts to Rs. 523 lakhs or 13 lakh less than in 1931-32. The payment of the contribution has been held in abeyance until the return of prosperous years.

Rupees have been converted into £ at the average rate of exchange for the year.

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs. 84 crores in 1932-33 to Rs. 86 crores in 1933-34 and to Rs. 90 crores in 1934-35; but the net result of the year's working showed a loss of about Rs. 5 crores. No contribution was therefore made to the general revenues.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22d. per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counter-balance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch

to any through line in his territories, has for some time kept this scheme in the background. The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1934-35 the principal open line improvements were renewals of permanent way, remodelling of workshops at Jamalpur and Jhansi, remodelling of Delhi yard and the conversion of the Shoranur-Cochin railway into broad-gauge.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the

Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Incheape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

- (a) the directly controlling authority of the State-worked systems aggregating 18,499 miles in on the 31st March 1929,
- (b) the representative of the predominant owning partner in systems aggregating 29,451 miles,
- (c) the guarantor of many of the smaller companies, and
- (d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity central carried out on railways and to undertake work on the many forms of railways publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board, therefore, consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers, to the Central Publicity Officer and the Officers in the Central Publicity Bureau and to the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management.

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of

the Company-managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State-managed lines have generally adopted the divisional organisation.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Account Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work, no definite decision has yet been arrived at.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But

in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management.—

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under

State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4½ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsular Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st, 1929, the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its manage-

ment taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council:—“that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital,

(b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to bor-

row temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways.”

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23.

The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr. Pope, General Executive Assistant to the President of the I. M. S. Railway was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that "job analysis" should be initiated on all railways, the following recommendations were made:—

- (i) The better use of Locomotives.
- (ii) The better use of Railway land.
- (iii) Additional research and experiments.
- (iv) Improved Workshop practice.
- (v) More careful listing of surplus track, equipment and accommodation.
- (vi) Possibility of reducing hot axles.

During the year under review four cases were referred to the Rates Advisory Committee:—

- (a) Complaint alleging quotation of preferential rates for firewood from certain stations.
- (b) Complaint of undue preference in rates for unpressed cotton.
- (c) Complaint of unreasonable rates being charged on coal from certain areas.
- (d) Complaint regarding rates for rice from certain stations.

During 1932-33 six cases were referred for investigation.

As a result of Mr. Pope's report regarding the possibility of further economies on railways and in particular with reference to the report on "job analysis." Small committees were formed on the leading railways to conduct detailed investigations. Reports show that the work is being continued vigorously and with an encouraging degree of success. The more interesting features are as follows:—

1. On the B. B. & C. I. Railway savings, due to intensive use of locomotives and reduced staff in certain workshops and at stations, amounting to Rs. 3.52 lakhs.

2. Burma Railways savings amounting to Rs. 26,000 were realised during the year and it is estimated that this will increase to Rs. 74,000 annually in future years.

3. B. B. Railway a conservative estimate shows the savings as Rs. 2,14,864 due chiefly to better use of rolling stock, more efficient manufacture of signals, reduced consumption of high grade fuel.

4. E. I. Railway savings amounting to more than Rs. 7 lakhs.

5. G. I. P. Railway savings effect Rs. 4.29 lakhs chiefly under wages.

6. M. & S. M. Railway savings amounting to Rs. 46,020 and annual economies anticipated at Rs. 72,559.

7. N. W. Railway savings amounting to Rs. 12.67 lakhs.

8. S. I. Railway savings amounting to Rs. 22,704.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of Mr. Pope's second report were:—

1. Intensive use of locomotives.
2. Intensive use of coaching stock.
3. Intensive use of machinery and plant.
4. Uneconomical wagons.
5. Combining resources between railways.
6. Handling and transport of small traffic and of traffic to be transhipped at break of gauge stations.
7. Ticketless travel.
8. Methods of increasing earnings.

Rates Advisory Committee.

The Rates Advisory Committee was constituted in 1926 to investigate and make recommendations to Government on the following subjects:—

1. Complaint regarding classification of certain goods.
2. Complaint regarding the rates charged for cotton from certain stations in the Punjab.

Six other representations were made for a reference to the Railway Rates Advisory Committee. But on investigation such reference was not made.

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bhore Ghat Reversing Station. The problem of eliminating the Reversing Station had been seriously considered on several occasions in the past but it was not until 1923, when electrification had been definitely decided

upon, that final survey operations became imperative.

Apart from the location of the realignment which called for the adoption of methods unusual in ordinary survey practice, the works involved in the construction of this double line broad-gauge section of railway were of considerable magnitude, chiefly in the form of heavy tunnel construction.

There are three tunnels in all aggregating 4,598 feet or .87 of a mile. The longest of these is 3,100 feet built throughout on a curve of the sharpest radius which occurs in these ghats. Allowing for curvature and the considerably increased spacing of tracks necessitated by the adoption of the latest standard dimensions, a tunnel section of 34 feet 6 inches wide and 24 feet 6 inches high was decided upon. This is considered to be the largest tunnel section in the world.

The steam trains to Poona took approximately 6 hours for the journey and it is anticipated that with electric traction this timing will be now reduced to approximately 3 hours.

With the opening of the electrified section between Kalyan and Igatpuri in October 1930, it is believed that the G. I. P. Railway has the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world.

There is no question but that during 1934-35 the tourist traffic to India increased materially. Until the matter of official statistics being maintained has been settled it is, of course, impossible to give definite figures; at the same time the increase in the tourist traffic is estimated to be from 20 per cent. to 30 per cent. This is borne out by the leading travel bureaux and also by such figures which are available from the ports. In the case of Bombay the figure for foreign tourists, as reported by the police, shows an increase of 74 per cent.

It is of interest to note that the use of tourist cars by overseas visitors has increased from Rs. 23,451 to Rs. 40,872, an increase of 112.6 per cent. In spite of the fact that tourist cars were used less by people in India the total revenue therefrom including both "Overseas" and "Inland" traffic has increased by 11.4 per cent. World cruise traffic earnings show a total of Rs. 1,33,795 as against Rs. 1,21,741 in 1933-34.

In the Annual Report of 1933-34 a note was attached to page three which gave the figure of the Board of Trade for visitors to India and Ceylon from Great Britain. This figure amounted to 6,727. In 1934-35 this figure has risen to 7,385 or an increase of approximately 10 per cent. It must be borne in mind that this figure represents only those passengers embarking at British ports and does not include visitors to India from other countries.

The estimated average expenditure in India per head per visitor has already been carefully worked out on previous occasions. This average expenditure has been found to be Rs. 2,200. This figure includes railway fares, hotel and other incidental expenses such as purchases, road transport, etc.

The abovementioned traffic would, therefore represent a revenue to India of

1933-34..	Rs. 1,47,99,400
1934-35..	Rs. 1,62,47,000.

To these figures, however, should be added those pertaining to visitors embarking at non-British ports, which will very materially add to the total.

Even if only half the above amount is admitted as correct these figures prove the immense value to India of the tourist traffic.

An outstanding feature of the tourist traffic has been the increase of small individual parties as against conducted tours. This feature, it would seem, is likely to be accentuated in the future. The pleasing aspect of this is that it indicates among the travelling public a growing confidence in travel facilities and safety in India generally.

The London Bureau reports an increase in the total number of itineraries worked out. In the New York Bureau, however, these have dropped. A possible explanation for this is that there has been an increase in the activities of American Travel Bureaux which has resulted in a falling off of the demand for itineraries from the New York Bureau direct.

In view of the interest in India which exists in Australia a sum of Rs. 5,000 was allotted for the purpose of advertising in that country. It may be mentioned that the first advertisement to appear drew enquiries.

The total capital outlay on all railways during 1934-35 was Rs. 1.30 crores of which Rs. 0.25 crores were spent on State owned railways.

TRADE REVIEW.

Exports.—During the year 1934-35 the total value of exports including re-exports amounted to Rs. 155 crores as compared with Rs. 150 crores in the previous year, an increase of Rs. 5 crores or 3 per cent. The increase was due mainly to heavy shipments of raw cotton which rose from 2,729,000 bales valued at Rs. 26.50 crores in 1933-34 to 3,446,000 bales valued at Rs. 34.50 crores in 1934-35. Despatches of Indian cotton piece-goods advanced from 56.5 to 57.7 million yards in quantity and from Rs. 1.66 to 1.77 crores in value. Shipments of jute bags improved from 402 to 423 millions in quantity and from Rs. 9.72 to 10.25 crores in value. Despatches of tea increased from 318 to 325 million lbs. in quantity and from Rs. 19.84 to 20.13 crores in value. Exports of raw rubber rose from 16 to 24 million lbs. in quantity and from Rs. 81 to 85 lakhs in value. Shipments of wheat increased from 2,100 tons to 11,000 tons in quantity and from Rs. 3.25 to 10.50 lakhs in value. Exports of barley rose from 142 tons valued at Rs. 0.11 lakhs to 14,000 tons valued at Rs. 9.25 lakhs. Under the metals group, 1,146,000 tons of metals and ores valued at Rs. 5.91 crores were exported in the year under review as against 976,000 tons valued at Rs. 5.49 crores in 1933-34. There were increases under teakwood (Rs. 32 lakhs), fodder, bran and pollards (Rs. 30.66 lakhs), wool carpets and rugs (Rs. 17 lakhs), raw hemp and coir (Rs. 8 lakhs each; and

animals (Rs. 2.33 lakhs). Exports of lac chiefly shellac, declined in quantity from 731,000 to 586,000 cwts., but owing to increased prices the value rose from Rs. 2.46 to 3.30 crores. Exports of food grains declined in quantity from 1,87,000 to 1,765,000 tons but the value showed a slight improvement from Rs. 11.75 to 11.84 crores.

Cotton manufactures (including twist and yarn), recorded a decline from Rs. 2.73 in 1933-34 to Rs. 2.65 crores in 1934-35. Shipments of cotton twist and yarn fell from 16.4 to 12.8 million lbs. in quantity and from Rs. 81.75 to 62.75 lakhs in value. Export of raw jute slightly increased from 4,190,000 to 4,214,000 bales in quantity but owing to reduced prices the value thereof fell from Rs. 10.93 to Rs. 10.87 crores. Shipments of jute cloth increased in quantity from 1,053 to 1,063 million yards but the value fell from Rs. 11.38 to Rs. 10.99 crores. Shipments of oil seeds fell from 1,124,000 to 875,000 tons and from Rs. 13.66 to 10.54 crores. Almost all descriptions of non-essential seeds showed decreases. Linseed from 379,000 to 238,000 tons, groundnuts from 547,000 to 511,000 tons, rapeseed from 73,000 to 37,000 tons and castor seed from 82,000 to 69,000 tons. Shipments of rice declined in quantity from 1,744,000 to 1,607,000 tons and from Rs. 10.57 to 10.37 crores in value. Shipments of hides and skins fell from 41,400 to 37,600 tons in quantity and from Rs. 9.90 to Rs. 8.35 crores in value. Exports of coffee declined by 45,000 cwts. in quantity and by nearly Rs. 30 lakhs in value. Decreases were noticed under raw wool (Rs. 71 lakhs), opium (Rs. 66 lakhs), paraffin wax (Rs. 37 lakhs) and coal (Rs. 8 lakhs).

Imports.—The total value of imports of foreign merchandise into British India during 1934-35 amounted to Rs. 132 crores as compared with Rs. 115 crores in the previous year, an increase of Rs. 17 crores or 15 per cent. Under imports, there was a revival of demand for textile manufactures, the value of which rose from Rs. 26.4 in 1933-34 to Rs. 33.5 crores in 1934-35 or an increase of 27 per cent. over the figures of the preceding year. Compared with 1932-33, there was a decrease of 11 per cent. Imports of cotton piece-goods amounted to 944 million yards valued at Rs. 16.93 crores as against 796 million yards valued at Rs. 13.49 crores in 1933-34. The total receipt of cotton twist and yarn rose by 2 million lbs. to 34 million lbs. with a corresponding increase in value by Rs. 52 lakhs to Rs. 3.10 crores. There were concurrent increases under some of the other important items included in the textile group—notably a rise of Rs. 1.32 crores under wool and woollens, of Rs. 85 lakhs under artificial silk (mainly yarn

and piece-goods made entirely of artificial silk) and of Rs. 13 lakhs under haberdashery and millinery. Imports of raw cotton advanced from 43,000 to 61,000 tons in 1934-35, with a corresponding rise in value from Rs. 3.56 to 5.28 crores. Increases were also noticeable under the metals group, the value having risen by Rs. 1.88 crores. Imports of iron and steel rose from 329,000 to 370,000 tons and in value from Rs. 5.53 to Rs. 6.38 crores and those of metals other than iron and steel and manufactures thereof from 62,000 to 86,000 tons in quantity and from Rs. 3.95 to 4.99 crores in value. There was an improvement in the imports of motor vehicles, the arrivals being valued at Rs. 4.66 crores in 1934-35 as compared with 3.19 crores in 1933-34 and Rs. 2.43 crores in 1932-33. The number of motor cars imported increased from 6,201 in 1932-33 to 9,759 in 1933-34 and to 14,434 in 1934-35 and that of motor omnibuses from 2,676 in 1932-33 to 5,496 in 1933-34 and 9,974 in 1934-35. There was an improvement in the imports of rubber manufactures, the value having risen from Rs. 1.88 crores in 1933-34 to Rs. 2.06 crores in 1934-35. Consignments of rice, not in the husk, advanced considerably from 84,000 to 283,000 tons valued at Rs. 49 lakhs and Rs. 1.88 crores respectively. Imports of mineral oils increased from 186 to 199 million gallons and the value thereof rose from Rs. 5.83 to Rs. 6.07 crores. Kerosene oil advanced from 58 to 69 million gallons and fuel oils from 104 to 109 million gallons. The value of provisions imported rose from Rs. 2.72 to Rs. 2.89 crores and that of paper and paste board from Rs. 2.63 to Rs. 2.73 crores. There were noticeable increases in the value of imports of electrical instruments (Rs. 50 lakhs), coal tar dyes (Rs. 63 lakhs), chemicals (Rs. 22 lakhs), dried fruits (Rs. 26 lakhs) and hardware (Rs. 17 lakhs).

Imports of foreign sugar showed a heavy decline from 264,000 tons valued at Rs. 2.71 crores in 1933-34 to 223,000 tons valued at Rs. 2.11 crores in 1934-35. The value of machinery and millwork imported contracted from Rs. 12.77 to 12.64 crores mainly due to a falling off in the imports of sugar machinery. There were noticeable decreases in the value of the imports of silk piece-goods (Rs. 57 lakhs), precious stones and pearls, unset (Rs. 25 lakhs), cotton hosiery (Rs. 19 lakhs), soap (Rs. 15 lakhs), raw silks (Rs. 14 lakhs), boots and shoes (Rs. 13 lakhs) and wheat (Rs. 7 lakhs).

Balance of trade.—The visible balance of trade in merchandise and treasure for the year 1934-35 was in favour of India to the extent of Rs. 78 crores as compared with Rs. 92 crores in 1933-34.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below :—

last two years are shown in the table below.

Commodity.	1933-34.		1934-35.		Increase+ Decrease— in earnings Rs. (in lakhs.)

Open Mileage.—The total route mileage on March 31st, 1935, was made up of—

Broad-gauge.. ..	21,199.45 miles.
Metre-gauge.. ..	17,658.81 "
Narrow-gauge	4,162.37 "

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows:—

Class I	38,204.43 miles.
Class II	3,536.73 "
Class III	1,180.47 "

During the year 1934-35 the mileage of new ones under construction was 138.64 miles.

Class I Railways.	Number of seats in passenger carriages.			
	1st.	2nd.	Inter.	3rd.
5'-6" ..	24,289	44,435	64,408	660,519
3'-3½" ..	10,776	14,825	12,546	366,291

Financial Results of Working.—The gross traffic receipts of the state owned railways amounted to Rs. 90.20 crores in 1934-35 or an increase of Rs. 3½ crores over the previous year.

(Based on actuals of penultimate year 1932-33.)

(Figures in thousands.)

	Rs.	Rs.
1. 1 per cent. on capital of Rs. 7,22,45,01 at charge—commercial lines— to end of 1932-33	7,22,45
(i) Receipts (1932-33)—		
Gross traffic receipts—commercial lines	84,34,87

Output of Railway owned Collieries.—The output of railway owned collieries during 1930-31 was—

2,926,812 tons for a total of 8,629,014 tons.

Consumed for 1931-32 the figures are

2,484,891 tons for a total of 5,759,398 tons.

For 1933-34 the figures are

2,470,020 tons for a total of 5,935,826 tons.

Number of Staff.—The total number of employees on Indian Railways at the end of the year 1934-35 was 705,087 as compared with 701,436 at the end of 1933-34. The following table shows the number of employees by communities on 31st March 1933, 1934 and 1935:—

	Europeans.	Statutory Indians.					
		Hindus.	Muham- madans.	Anglo- Indians.	Sikhs.	Indian Christians.	Other Classes.
31st March 1933	4,297	504,082	152,875	13,048	8,591	15,574	11,804
31st March 1934	3,906	497,505	151,625	12,844	8,339	16,167	10,976
31st March 1935	3,521	499,968	152,276	13,438	8,739	16,754	10,391

Indianisation.—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as

practicable up to 75 per cent. of the total number of vacancies in the Superior Services of the Railway concerned.

Fatalities and Injuries.—During the year 1931-32 the number of persons killed decreased by 292 as compared with the previous year; the number of passengers killed decreased by 82 and of passengers injured by 125.

The following table shows the numbers killed and injured separately under passengers, railway servants and others for 1934-35 as compared with 1933-34 :—

	Killed.		Injured.	
	1933-34.	1934-35.	1933-34.	1934-35.
<i>A.—Passengers.</i>				
In accidents to trains, rolling-stock, permanent-way, etc.	21	15	160	74
In accidents caused by movements of trains and railway vehicles exclusive of train accidents ..	204	180	785	794
In accidents on Railway premises in which the movement of trains, vehicles, etc., was not concerned	7	5	19	38
<i>B.—Railway Servants.</i>

In accidents on Railway premises in which the movements of trains, vehicles, etc., was not concerned	23	28	798	67
Total ..	2,826	3,031	10,982	10,252

Local Advisory Committees.—In the Annual Reports by the Railway Board on the working of Indian Railways, references are made each year to the work that is being done by Local Advisory Committees on railways in bringing to the notice of their respective railways administrations matters affecting the general public in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways, except His Exalted Highness the Nizam's State Railways and the Jodhpur Railway. During 1929-30, the Barsi Light Railway constituted an Advisory Committee for that line.

These committees constitute a valuable link between railways and their clientele.

The following is a list of some of the more important matters discussed :—

Increase in accommodation for long distance third class passengers; Improvements in third class stock; Provision of alarm signals in ladies' intermediate class compartments; Consideration of present system of catering at stations & on trains; Construction of new lines; Construction of overbridges & raised platforms; Suggestions for improvement of booking facilities; Elimination of one of the four classes of accommodation for passengers; Special arrangements for festivals; Portage rates; Representation of agriculturist & passenger associations on Local Advisory Committees; Speeding up of trains; Supply of drinking water to passengers; Supply of wagons; Reintroduction of coupon books and extension of concession tickets; Provision of waiting rooms at stations.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	1,308.41
Capital at charge	Rs. 23,65,62,000

Earnings per cent.	2.06%

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	21,12.56
--------------------	----------

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatigarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,635,581.

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near

future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said:—"During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route *via* the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee. From January 1st, 1925, its working has been taken over by the State.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1882. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the share-holder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhand railway was amalgamated with it.

Mileage open	4,391.71

Earnings per cent.	4.92%

(Mileages are route mileages.)

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Ratichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhore Ghat and 9½ miles on the 'Phul Ghat' which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

Mileage open	3,727.29

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Earnings per cent.	3.47%

*(Commercial Section.)

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre-gauge systems to the North and those to the South of the Ganges, a third rail was laid between Ehurlwal and Cawnpoor. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

At the end of the financial year 1929-30 a total of 1257.57 miles of new lines was under construction, distributed as follows:—

	Miles.
5'-6" gauge	730.77
3'-3½" gauge	457.51
2'-6" gauge	69.29

During 1929-30 sanction was accorded to the construction of new lines totalling 227.77 miles.

	Miles.
5'-6" gauge	93.00
3'-3½" gauge	115.17
2'-6" gauge	19.00

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.06 miles of which 7.19 will be upon the dry land of the various lands, and 12.88 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jacks. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kawkpku stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system.

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The

high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

COAL.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

(a) Estimated.

The three preceding years recorded a continuous decrease in production of coal from the peak figure of 23,803,048 tons in 1930; but in 1933 the decrease was only 364,224 tons or about 1.8 per cent., as contrasted with decreases of 8.8 per cent., and 7.2 per cent. in 1931 and 1932 respectively. In 1934 the direction of change was reversed and production increased by 2,268,284 tons (or 11.4 per cent.) from 19,789,163 tons in 1933 to 22,057,447 tons in 1934. This increase was shared by all provinces except Assam, which showed a trivial decrease. The most important increases were in Bihar and Orissa, Bengal and the Central Provinces (see Table 6). In Bengal, Bihar and Orissa all the fields showed increases except Jainti, the Rajmahal Hills and Talcher, the largest advance being shown by Jharia of over one million tons. In Central India both Sohagpur and Umaria showed increases, as did all four fields in the Central Provinces, the most notable being an increase of over 136,000 tons in Korea to a total of 400,350 tons and of 140,000 tons in the Pench Valley to a total of 1,117,942 tons, the Pench Valley exceeding one million tons for the first time. In Hyderabad State, the Singareni and Tandur fields showed increases and Sasti a decrease. In the Tertiary coalfields of Assam, Baluchistan, the Punjab and Rajputana, increases were shown by all the fields except the Naga Hills in Assam, Khost in Baluchistan and Shahpur in the Punjab.

As usual the output of the Tertiary fields was but a trivial proportion of the whole, the proportions being 98.34 per cent. from the Gondwana coalfields and 1.66 per cent. from the Tertiary coalfields.

A feature of the last 11 years has been the very large expansion of the output from the Central Provinces from 679,081 tons in 1924 to 1,842,492 tons in 1934. This undoubtedly accentuated the fall in output of Bihar and Orissa from 14,105,529 tons in 1924 to 11,257,984 tons in 1933, with a partial recovery to 12,630,409 tons in 1934.

In continuation of the trend of 1933, the export statistics for coal during 1934 show a further decrease amounting to about 97,000 tons. Exports to Ceylon were steady at about 228,000 tons, Ceylon retaining her position as the leading importer of Indian coal. The Straits Settlements showed an increase of 26,000 tons, but exports to all other destinations decreased, the decreases being some 84,000 tons to Hongkong, 6,000 tons (to nil) to the Philippine Islands, and nearly 30,000 tons to the United Kingdom (almost to nil). The export of coke increased by 1,331 tons.

In reversal of the trend of recent years imports of coal and coke showed during 1933 an increase namely from 47,544 tons in 1932 to 67,330 in 1933; 21,121 tons of the latter consisted of

coke 1934 showed a further slight increase to 72,161 tons, of which 14,719 tons were coke. This rise was due mainly to an increase of some 7,000 tons from South Africa, with smaller increases from Australia and the United Kingdom, partially offset by a decrease of some 6,000 tons in the amount of coke imported. The average surplus of exports during the years 1926 to 1934 was, in fact, greater than the surplus during the prewar quinquennium.

The true cause of the depression in the Indian coal industry is over-development of coalfields with reference to India's requirements. Every new coalfield that is opened up at present merely serves to accentuate the depression.

The average number of persons employed in the coalfields during the year showed a smaller increase (3.8 per cent.) than the increase in production (11.4 per cent.). The average output per person employed, therefore, showed a marked increase from the low figure of 121.3 tons in 1933 to 130.2 tons in 1934, which is practically

the same as the figure for 1929, namely 136.4 tons, the highest figure recorded. All the figures for the last six years are higher than those previously recorded; these higher figures are due partly to an increased use of mechanical coal-cutters, and partly to concentration of work. During the recent years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction of the supervising staff, resulting in a larger tonnage per head. There was an increase in the number of deaths by accident from 132 in 1933 to 169; these figures are however, much better than the annual average for the quinquennium 1919-1923, which was 274, and also below the annual average for the quinquennium 1924-1928, which was 218, and may be compared with the annual average for 1929-1933, which was 186. The death rate was 1.00 per thousand persons employed in 1934 against 0.81 for the previous year; the average figure for the period 1919-1923 was 1.36, for the period 1924-1928 was 1.16, and for the period 1929-1933 was 1.08.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds on difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Noti Burn and Buda Burn respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous

additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Burn, a portion of Noti Burn, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Burn rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads, or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

The production of iron ore from 2,480,186 tons in 1929 the output of iron-ore in India fell to 1,228,625 tons in 1933. In 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons, an increase of 56 per cent. There were also substantial increases in the output of pig-iron and steel.

Exports of pig-iron.—The substantial increase in the production of pig-iron in India recorded above was accompanied by a small rise in the quantity exported from 372,015 tons in 1933 to 398,054 tons in 1934. Japan was the principal consumer of Indian pig-iron; the proportion taken rose from 48.3 per cent. in 1933 to 53.5 per cent. in 1934, whilst the actual amount rose by 18 per cent. There was also an increase in exports to the United Kingdom of about 29 per cent. (24,044 tons), but a large decrease in exports to the United States (39,764 tons or over 55 per cent.). The export value per ton of pig-iron fell from Rs. 24.5 (£1.84) in 1933 to Rs. 22.2 (£1.69) in 1934.

The Steel Industry (Production) Act 1924 (Act No. XIV of 1924).—authorised, to companies employing Indians, bounties upon

rails and fishplates wholly manufactured in British India from material wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927; the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs. 10 per ton *ad valorem* in most cases, or about Rs. 40 per ton in the case of articles not of British manufacture.

(a) Estimated.

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927.—Before the year 1926, the record production of manganese-ore in India took place in 1907, when 902,291 tons were raised. In 1926, the output rose to 1,014,928 tons, valued at £2,463,491 *f.o.b.* Indian ports; the rise in output was, however, accompanied by a decrease in value. In 1927 the production rose to the highest figure yet recorded, 1,129,853 tons, accompanied by a rise in value to the peak figure of £2,703,068 *f.o.b.* Indian ports. During the year 1928, the upward tendency was not maintained, the output falling to 978,449 tons valued at £2,198,895 *f.o.b.* Indian ports. In 1929, the output rose again slightly to 994,279 tons, but the value fell heavily to £1,571,030. In 1930 the output fell substantially to 829,946 tons with a heavy fall in value to £1,200,236. In 1931 a still more serious fall took place, to 597,844 tons with a value of £726,954. This was followed by a disastrous fall in 1932 to 212,604 tons with a value of £140,022. In 1933 the output rose

slightly to 218,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901, when the output was 120,891 tons valued at £122,831. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £920,546; whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one twenty-second part of the value of the 1927 production. In fact in none of the major Indian mineral industries have the effects of the slump been so seriously felt as in the manganese industry.

The partial recovery of the Indian manganese industry during 1934 was reflected in an increase of exports, including the quantities exported from Mormugao in Portuguese India from the

nadir of 375,904 tons in 1933 to 405,998 tons in 1934. This increase was shared almost entirely between Vizagapatam and Calcutta. The opening of the new port at Vizagapatam has been the one bright feature in the Indian manganese industry during the last two years on account of the reduced lead from the Central Provinces to the sea. The United Kingdom, with an increase of some 66,000 tons retained her position as the chief importer of Indian manganese-ore. The second place as importer was held by Japan with a decrease of some 19,000 tons, with France third with an increase of some 8,000 tons; Belgium again showed a decrease, amounting to some 5,000 tons. In 1932 the exports to the United States of America, one of India's principal markets for manganese-ore, had ceased completely. In 1933 there was a trivial export to this destination but in 1934 the exports to the United States recovered to 30,083 tons (under 'Other countries'). The feature of the year was the large increase in the exports to the United Kingdom.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in

Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910;

the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,145 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. There was a trivial fall in the total Indian gold production from 330,488.8 ozs.

valued at Rs. 2,08,01,043 (£1,540,885) in 1931 to 320,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123) in 1932. In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,488.8 ozs. valued at Rs. 2,08,01,943 (£1,540,885), followed by a trivial fall again in 1932, when the output was 320,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123). In 1933 there was an increase to 336,108.3 ozs. valued at Rs. 2,76,40,071 (£2,078,201). In 1934 the output fell to 322,142.9 ozs., but the value increased to Rs. 2,92,72,130 (£2,200,836), being the highest in terms of sterling since 1920. It is interesting to note that the output of 1931 which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,726.6 ozs.

The average number of persons employed on the Kolar Gold Field during 1934 was 21,514, of whom 13,161 worked under-ground,

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java and Borneo. The other area is on the west, and includes the Punjab and Baluchista, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy Valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to

1886, prior to annexation of Upper Burma the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are

known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

The world's production of petroleum in 1926 amounted to nearly 150 million long tons, of which India contributed 0.73 per cent. In 1927, this figure jumped to some 172 million long tons, of which the Indian proportion, on a practically stationary production, fell to 0.64 per cent. In 1928 there was another substantial rise in the world's production, which reached the figure of over 181 million tons. In 1929, there was another jump to over 202 million tons,

but in 1930 the world's production fell to about 193½ million tons, in 1931 to about 187 million tons, and in 1932 to about 179 million tons, whilst in 1933 the production rose again to about 198 million tons. Decreases were shown by Columbia, Trinidad, India, Germany, Egypt and Canada. All other important producers showed an increase in production, by far the largest amount being due to the United States. The United States contributed 62.5 per cent. of the world's supply in 1933, Russia 10.6 per cent. and Venezuela 8.3 per cent. In 1928, India contributed 0.64 per cent., which fell to 0.60 per cent. in 1929 and rose to 0.62 in 1930, 0.63 per cent. in 1931 and 0.64 per cent. in 1932, and fell again to 0.62 per cent. in 1933; her position on the list of petroleum producing countries fell from 11th in 1929 to 12th in 1930 to 1933, her place being taken by Trinidad.

The production of petroleum in India (including Burma) increased from 306,009,022 gallons in 1933 to 322,025,280 gallons in 1934, the highest figure in the history of the industry, the previous peak production being 311,030,108 gallons in 1930. The increase in 1934 was largely due to an increase of some 11 million gallons in Assam aided by an increase of about half this amount from Burma, offset partly by a moderate decrease in the Punjab. This increase in output in 1934 was accompanied, however, by a small decrease in estimated value amounting to Rs. 25,74,477 (£193,570), or 4.1 per cent.

Amber and Mica.—The production of amber in the Myitkyina district, Burma, decreased from 29.5 cwts. valued at Rs. 12,020 (£897) in 1928, to 19.6 cwts. valued at Rs. 6,080 (£454) in 1929, and 2.1 cwts. valued at Rs. 730 (£54) in 1930. There was no reported output in 1931, but in 1932 there was an output of 11.5 cwts. valued at Rs. 1,940 (£146), in 1933 of 76 lbs. valued at Rs. 1,500 (£113), and in 1934 of 3.7 cwts. valued at Rs. 152 (£12).

There was a marked rise in the declared production of mica from 41,075 cwts. valued at Rs. 16,82,045 (£126,470) in 1933 to 55,706 cwts. valued at Rs. 20,76,599 (£156,135) in 1934. As has been frequently pointed out, the output figures are incomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In the years 1926 and 1927 the export figure was approximately double the reported production figure, whilst in the years 1928 and 1929 the quantity exported was more than double the reported production. In 1930 the recorded exports were, however, only some 57 per cent. In excess of the reported production, in 1931 36 per cent., in 1932 43 per cent., and in 1933 some 45 per cent. in excess.

Tin, Copper, Silver and Lead.—A further increase has to be recorded in the production of tin-ore from Burma including Karenni State from 4,503.9 tons valued at Rs. 64,37,656 (£484,034) in 1933 to 5,801.2 tons valued at Rs. 1,01,70,348 (£764,688) in 1934. This is the highest quantity and total value yet recorded in any one year. The large increase in the total value is, of course, mainly due to the rise in the price of the metal resulting from the tin restriction scheme in operation in the five leading tin-producing countries—Malaya, Netherlands, East Indies, Bolivia, Nigeria and Siam, a scheme to which India is not an adherent. The increase in output of some 1,297 tons is shared between all the producing districts. Of the total production of 1934 3,907.2 tons, or some 67.3 per cent., came from Burma proper, the balance of 1,894 tons being derived from Mawchi in Karenni State. There was no reported output of block tin.

Imports of Unwrought Tin rose from 41,655 cwts. valued at Rs. 52,96,454 (£398,230) in 1933 to 44,454 cwts. valued at Rs. 67,71,443 (£509,131) in 1934; over 97 per cent. of these imports came from the Straits Settlements.

Copper.—During 1934 the mine output increased to 328,422 long tons of copper-ore from Mosaboni and 254 long tons from Dhubani, making a total of 328,676 long tons, valued at Rs. 34,10,869 (£257,133), against 201,722 long ore in 1933 valued at Rs. 22,12,966 (£166,388). tons of copper A total of 314,085 short tons of ore was treated in the mill, and the production of refined copper amounted to 6,300 long tons against 4,800 tons in the previous year. A total of 5,256 tons of copper ingots was consumed in the rolling mill and 852 tons were sold in the Indian market at an average price of Rs. 598 per ton. Operations in the rolling mill resulted in the production of 8,180 long tons of yellow metal, the whole of which was sold in India at an average price of Rs. 584 per ton.

The production of silver from the Bawdwin mines of Upper Burma during 1934 fell slightly by 262,028 ozs. as compared with 1933, but this fall in quantity was accompanied by a rise in value of Rs. 8,09,787 (£65,398) due to the increase in the price of silver during the year.

The output of silver obtained as a by-product from the Kolar gold mines of Mysore showed a fall of 681 ozs.

The amount of silver bullion and coin exported during the year was 53,991,714 ozs. valued at Rs. 7,26,70,511 (£5,463,948) as compared with 58,328,890 ozs. valued at Rs. 7,00,38,500 (£5,266,059) during 1933.

The production of lead-ore at the Burma Corporation's Bawdwin mines in Burma fell slightly from 544,791 tons in 1933 to 443,489 tons in 1934, whilst the total amount of metal extracted fell from 72,045 tons (including 1,485 tons of antimonial lead) valued at Rs. 1,15,61,915 (£869,317) in 1933 to 71,815 tons (including 1,255 tons of antimonial lead) valued at Rs. 1,06,86,230 (£803,476) in 1934. The quantity of silver extracted from the Bawdwin ores fell slightly from 6,054,047 ozs. valued at Rs. 65,74,695 (£494,338) in 1933 to 5,792,019 ozs. valued at Rs. 74,44,482 (£559,736) in 1934. The value of the lead per ton fell from Rs. 160.5 (£12.07) to Rs. 148.8 (£11.19), whilst the value of the silver per ounce rose from Rs. 1-1-5 (19.6d.) to Rs. 1-4-7 (23.19d.) in the year under review. The ore reserves in the Bawdwin mine as calculated on the 1st of July, 1934, totalled 4,062,511 tons, against 4,133,792 tons at the end of June 1933, with an average composition of 24.6 per cent. of lead, 14.8 per cent. of zinc, 0.84 per cent. of copper, and 18.9 ozs. of silver per ton of lead. Included in this reserve are approximately 250,000 tons of copper-ore.

Magnesite.—The output of magnesite showed a small decrease of 231 tons, accompanied by a

trivial increase in value. The decrease was due to decrease of about 1,000 tons from Mysore State, partially balanced by an increase in the output of the Salem district, Madras.

Zinc.—The production of zinc concentrates by the Burma Corporation Limited, in the Northern Shan States, rose from 61,432 tons valued at Rs. 30,82,944 (£231,800) in 1933 to 68,838 tons valued at Rs. 26,77,413 (£201,309), the increase in quantity being accompanied by a decrease in value. The quantity is the greatest hitherto recorded, but the value is much below those of the years 1926 to 1929 (£559,412 in 1928). The fall in value during 1934 is, or course, due to a fall in the market price of spelter.

The exports during the year under review amounted to 77,500 tons valued at Rs. 29,46,993 (£221,556) against 64,050 tons valued at Rs. 32,02,500 (£240,789) in the preceding year.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. The production of diamonds in Central India rose from 2,342 carats valued at Rs. 63,695 (£4,789) in 1933, to 2,480 carats valued at Rs. 1,22,501 (£9,211) in 1934. Of this latter production 2,429 carats were produced in Panna State and the remainder in Charkhari, Ajaigarh, and Bijawar.

Since the liquidation of the Burma Ruby Mines, Limited, and the final cessation of the operations of this company in 1931, there has been an interregnum during which reliable statistics of production of gem stones in the Mogok Stone Tract have been unobtainable. Work, however, is still continued by local miners; in addition a certain amount of work is being done under extraordinary licenses. For 1932 no returns were available, except that a fine **Ruby** of 17 carats was found at Chaunggyi near Mogok, and a fine sapphire of about 90 carats and a good star sapphire of 453 carats were mined at Kathie. For 1933 the only return was of 1,103 carats of rubies from Kathie. For 1934, however, there is a reported production of 21,622 carats of rubies valued at Rs. 86,011 (£2,708) and 153 carats of sapphire valued at Rs. 330 (£25). The data for 1933 and 1934 relate to production under extraordinary licenses.

In addition the production was reported from Soomjam in the Pudar district of Kashmir State, of 18,375 tolas (1,071,869 carats) of **Sapphire** valued at Rs. 1,38,961 (£10,448). In addition there was a production of 68,560 tolas of **Corundum** of no commercial value. The sapphire deposits of Kashmir have long been known, but on account of their high altitude they are worked only occasionally.

SALT.

There was a large increase in the total output of salt, amounting to nearly 250,000 tons, shared by all producing provinces but chiefly due to Bombay and Sind (205,434 tons) and Aden (27,256 tons). The total production—1,963,702 tons—is the highest yet recorded, the previous maximum output being 1,921,396 tons in 1919. Imports of salt into India increased by some 25,000 tons, all the countries of origin, showing decreases excepting Aden from which 53,493 tons were received above the imports of the previous year.

Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the Share and Stock Brokers' Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to stop business in times of emergencies. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased.

In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 11,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the **Bombay Stock Exchange, Ltd.** This separate Exchange no longer functions it was revived in 1922. It has ceased to function again.

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, customs, practices, rules, regulations and methods

of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform, notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, however, adopted the minority report which leaves the constitution and practice of the Exchange very little modified.

In the middle of the year 1925 there was heavy speculation in certain mill scrips. The market was tremendously oversold, the usual crisis ensued, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted new draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the Calcutta Share Market met in the open air in business quarters and was under no control except that of market custom. In 1908 the Calcutta Stock Exchange Association was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian Industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 800 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is 608. The Committee has restricted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone to become a member is required to

purchase a share from a member and seek election and on being elected the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is controlled by bye-laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures.

A general meeting of the shareholders annually elects a Committee which elects several Sub-Committees and Hon. Office Bearers—the President and two Joint Hon. Treasurers. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hon. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1935.—J. R. Coulthard, Esq. President; J. S. Haywood, Esq.; G. C. Montgomery, Esq.; O. A. Cohen, Esq. Sarbototh Sen, Esq.; Jitendra Mohan Dutt, Esq., M.Sc.; Goralall Seal, Esq.; Shambhu Nath Dutt, Esq.; Gobind Lal Bangur, Esq.; Mahaliram Sonthalia, Esq.; Basant Lal Chaturvedi, Esq.; Jagannath Jhunjhunwala, Esq.; Bishambhar Nath Chaturvedi, Esq., B.A., LL.B.; Mokandull, Esq.

Joint Honorary Treasurers.—Goralall Seal, Esq.; Mahaliram Sonthalia, Esq.

Secretary.—From April 1935, D. Chakravarty, M.A., B.L.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July 1923, by Sir Stanley Jackson, the Government Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. The Mezzanine floor contains the offices of the Association, a well equipped library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The Madras Stock Exchange situated at No. 9 Broadway consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership card of Rs. 1,000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs. 3,000.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir D. B. Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Con-

gress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities falling, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following:—

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.
- (c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (g) To draw, make, accept, discount, execute and issue bills of exchange promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

The Rules provide for two classes of members, viz., numbers consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150).

The following are the Committee of the Federation for 1935:—

President.—Lala Padampat Singhania.

Vice-President.—Mr. D. P. Khaitan.

Members of the Committee.—Kasturbhai Lalbhai (Ahmedabad Millowners' Association, Ahmedabad), Mr. G. D. Birla (Indian Chamber of Commerce, Calcutta), Sir Purshotandas Thakurdas, Kt., C.I.E. M.B.E. (Indian Salt Association, Bombay), Mr. Manu Subedar (Indian Merchants' Chamber, Bombay), Mr. A. D. Shroff (Indian Merchants' Chamber, Bombay), Lala Shri Ram (Delhi Factory-owners' Federation, Delhi), Seth Walehand Hirachand (Maharashtra Chamber of Commerce, Bombay), Mr. Nalini Ranjan Sarker

(Bengal National Chamber of Commerce, Calcutta), Mr. Chaudhri B. Mehta (Bombay Bullion Exchange, Bombay), Mr. M. L. Dahanukar (Maharashtra Chamber of Commerce, Bombay), Lala Ranjidas Vaidya (Gwalior Chamber of Commerce, Lashkar) and Lt. Sardar P. S. Solihans (Indian Chamber of Commerce, Lahore).

Honorary Treasurers.—Mr. D. P. Khaitan (Indian Chamber of Commerce, Calcutta), and Sir Hari Sankar Paul, Kt., M.L.C. (Bengal National Chamber of Commerce, Calcutta).

Co-opted Members.—Mr. S. M. Rashid, Cawnpore, Pandit K. Santanani, Lahore, Mr. M. Muhammad Ismail, Madras, Mr. B. Das, M.L.A., Cuttack, Mr. A. L. Ojha, Calcutta and Mr. Hoshang N. E. Dinshaw, Karachi.

Secretary.—Mr. D. G. Mulherkar.

Office address.—Kamla Tower, Cawnpore.

Telegraphic address.—Unicomind, Cawnpore.

BENGAL

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1936-37:—

President.—Sir Edward Penthall, Messrs. Bird Co.

Vice-President.—Mr. C. G. Arthur, Messrs. Jardine, Skinner & Co.

Members.—Mr. T. T. K. Allan, The National Bank of India, Ltd.; Mr. H. F. Bateman, Messrs. Shaw, Wallace & Co., Mr. A. O. Brown, Messrs. Mackinnon Mackenzie & Co.; Mr. W. Hunter, Messrs. Gillanders, Arbuthnot & Co.; Mr. J. Reid Kay, Messrs. James Finlay & Co., Ltd.; Mr. C. C. Miller, M.L.C., Messrs. Hoare, Miller & Co., Ltd.; Mr. J. H. S. Richardson, Messrs. Andrew Yule & Co., Ltd.

The Secretary of the Chamber is Mr. A. C. Daniel. Assistant Secretary, Mr. D. C. Fairbairn.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council of State.—The Hon'ble Sir George Campbell.

The Bengal Legislative Council.—Mr. F. T. Homan (Cal. Electric Supply Corporation Ltd.); T. Lamb (Begg Dunlop & Co. Ltd.); Mr. W. C. Wordsworth (The Stateman Ltd.); Mr. G. W. Leeson (Macneill & Co.); Mr. W. H. Thompson, (Bengal Telephone); Mr. C. C. Miller, (Messrs. Hoare Miller & Co. Ltd.).

The Calcutta Port Trust.—Mr. G. V. Lloyd (Turner Morrison & Co., Ltd.); Mr. W. Hunter (Gillanders Arbuthnot & Co.); Mr. A. O. Brown (Mackinnon Mackenzie & Co., Ltd.); Mr. G. W. Leeson (Macneill & Co.); Mr. K. J. Nicolson, (Gladstone, Wylie & Co.); Mr. J. Reid Kay, (James Finlay & Co., Ltd.).

The Calcutta Municipal Corporation.—Mr. C. W. Miles, (Shaw Wallace & Co.); Mr. E. G. Spooner, (Martin & Co.); Mr. W. T. Vizar Harmer (Bengal Iron Co., Ltd.); F. J. Marindin (Burna Shell Oil Storage & Distributing Co. of India, Ltd.); Mr. C. H. Holmes, (Holmes Wilson & Co., Ltd.); Mr. A. R. Colley, (Calcutta Electric Supply Corporation Ltd.).

The Board of Trustees for the Improvement of Calcutta.—Mr. W. H. Thompson, M.L.C. (Bengal Telephone Co., Ltd.).

The Bengal Boiler Commission.—Mr. W. Gow, (Burn & Co., Ltd.); Mr. T. W. Forrest; Mr. W. H. W. Urquhart.

The Bengal Smoke Nuisances Commission.—Mr. R. J. Oliver; Mr. G. Y. Robertson.

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Fire Insurance Association, Calcutta Import Trade Association, Calcutta Marine Insurance Association, The

Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers' Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Accident Insurance Association, Calcutta Flour Mills' Association, Calcutta River Transport Association, and the Masters' Stevedores' Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which

consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers' Department controlled by a special committee. It includes a Superintendent (Mr. R. Ellis), Head Office Manager (Mr. C. G. Smith) and Assistant Superintendents (Messrs. G. C. G. Smyth, J. B. F. Henfrey and B. Perry), and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BENGAL NATIONAL CHAMBER OF COMMERCE.

The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam; and to protect the commercial interests of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

President.—Sir Hari Sunker Paul, Kt., M.L.C., (Butto Kristo Paul & Co., Ltd.)

Vice-Presidents.—Mr. J. C. Banerjee, (J. C. Banerjee, Ltd.); Dr. N. N. Law, M.A., Ph.D.

Hon. Treasurer.—Dr. Satya Churn Law, M.A., Ph.D.

Members of the Executive Committee.—Mr. N. R. Sarkar, (Hindusthan Co-operative Insurance Society, Ltd.); Mr. S. C. Mitra, (Jalan Mitra & Co.); Rai A. C. Banerjee Bahadur, (A. C. Banerjee & Co.); Mr. Sadhan Chandra Roy, (Wilson & Roy); Kumar Kartick Churn Mallick, (Raja D. N. Mullick & Sons, Ltd.); Mr. Arun Prakash Boral, (Prasad Das Boral & Bros.); Mr. D. N. Sen, (Bengal Glass Works, Ltd.); Capt. N. N. Dutt, M.B., (Bengal Immunity Co., Ltd.); Mr. S. N. Banerjee, (Kalyanpur Lime Works, Ltd.); Mr. A. C. Sen, (D. M. Das & Sons, Ltd.); Mr. Jihon Krishna Mitter, Mr. N. K. Roy Choudhury, (Kaliharan Girish Chandra Roy Choudhury); Mr. B. Maitra, (Calcutta Chemical Co., Ltd.); Mr. Akhil Bandhu Guha, (Dhakeswari Cotton Mills Ltd.); Mr. K. Ray, (Ry & Ray); Dr. M. M. Ray, D.Sc., Ph.D.; Mr. S. C. Ray, M.A., B.L., (Aryasthan Insurance

Co., Ltd.); Mr. B. C. Ghosh, B.Sc. (Lond), B. Com. (Lond.), (Sisir Soap Works); Mr. Banwarilal Roy, Mr. Jogendra Kishore Das, M.A., B.L., (M. Bhattacharyya & Co.).

Secretary.—Mr. J. N. Sen Gupta, M.A., B.L.
Asst. Secretary.—Mr. S. R. Biswas, M.A.

I. Ry.; The East India Jute Association Ltd., 2, Royal Exchange Place, Calcutta; The Calcutta Iron Merchants' Association, P224/6, Strand Bank Road, Meerbaghat, Calcutta; The Oil Mills Association, 151B, Raja Dinendra Street, Calcutta; The Faridpur District Merchants' Association, Faridpur; The Association of Engineers, 2, Royal Exchange Place, Calcutta; The Indian Insurance Institute, 2, Royal Exchange Place, Calcutta; The Eastern Bengal Jute Association Ltd., 5/1, Royal Exchange Place, Calcutta; The Bengal Jute Growers' Association, 2, Royal Exchange Place, Calcutta; The Calcutta Shellac Exchange Ltd., 3, Mangoe Lane, Calcutta; The Tipperah Chamber of Commerce, Comilla; The Indian Planters' Association, Sridharpur, Sylhet; The Paddy Merchants' Association, 69/1, Chetla Road, Alipore, Calcutta; The Calcutta Wine Association, 1, Lindsay Street, Calcutta; The Tipperah Trades Association, Comilla; The Murshidabad Silk Association, Berhampur, District Murshidabad and The Provident Insurance Companies Association (Bengal), 2, Royal Exchange Place, Calcutta.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofussil. The local Members pay an annual subscription of Rs. 100 and the Mofussil members Rs. 50. Merchants, Bankers, Ship-owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1936-37:—

President.—Mr. B. M. Birla.

Senior Vice-President.—Mr. A. R. Dalal.

Vice-President.—Mr. G. L. Mehta.

Members.—Mr. N. L. Puri; Mr. K. L. Jatia; Mr. M. L. Shah; Mr. A. L. Ojha; Mr. D. P.

Khaitan; Mr. Faizulla Gangjee; Mr. H. L. Murarka; Mr. S. K. Bhatter; Mr. J. N. Lahiri; Mr. J. P. Dutta; Mr. K. J. Purohit; Mr. Kedar Nath Khandelwal; Mr. Kassim A. Mohamed; Mr. Bahadur Singh Singhi; Mr. Bansidhar Jalan; Rai Bahadur Ram Dev Chokhani; Mr. S. N. Mitter; Mr. L. P. Poddar.

Secretary.—Mr. M. P. Gandhi, M.A.

The following Associations are affiliated with the Chamber:—Indian Sugar Mills' Association, Jute Balers' Association, Indian Produce Association, East India Jute Association, Calcutta Rice Merchants' Association, Calcutta Kirana Association, Gunny Trades Association, Indian Colliery Owners' Association, Indian Tea Merchants' Association, and Marwari Rice Mills Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to cover the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades:—(1) Jute, (2) Gunny, (3) Piece-goods and Yarn, (4) Iron and Steel, (5) Coal and Minerals, (6) General.

Chamber's representatives on—

Calcutta Port Commissioners: D. P. Khaitan.

Bengal Nagpur Railway Local Advisory Committee: Mr. Kannal Lal Jatia.

East Indian Railway Local Advisory Committee: Mr. A. L. Ojha.

Eastern Bengal Local Advisory Committee: Mr. Mohanlal Laluchand Shah.

Board of Apprenticeship Training: Mr. G. L. Mehta.

Railway Rates Advisory Committee: Messrs. A. L. Ojha, H. P. Bagaria, G. L. Mehta, Faizulla Gangjee and D. P. Khaitan.

Calcutta Society for the Prevention of Cruelty to Animals: Board of Economic Enquiry, Bengal:—Mr. G. L. Mehta.

Chamber's Auditors: Messrs. S. B. Dandekar & Co., R.A.

INTERNATIONAL CHAMBER OF COMMERCE, INDIAN NATIONAL COMMITTEE.

The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928:—

(a) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber", is established, namely:

(i) To facilitate the commercial intercourse of countries.

(ii) To secure harmony of action on all international questions affecting finance, industry and commerce.

(iii) To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of business men and organizations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 35 commercial bodies as Organisation Members and 87 commercial firms as Associate Members.

OFFICE-BEARERS FOR THE YEAR 1936-37.

President :—Mr. D. P. Khaitan.

Vice-President :—Mr. Walchand Hirachand.

Members of the Committee :—Lala Padampat Singhania, Cawnpore; Mr. Hoosenibhoy A. Lalljee, M.L.A., Bombay; Mr. Kasturbhai Lalbhai, Ahmedabad; Mr. G. D. Birla, Calcutta; Sir Purshottamdas Thakurdas, Kt., C.I.R., M.B.E., Bombay; Mr. Manu Subedar,

Bombay., Mr. A. D. Shroff, Bombay; Mr. Chunilal B. Mehta, Bombay; Mr. M. L. Dahanukar, Bombay; Lt. Sirdar P. S. Sodhbans, Lahore; and Mr. Vidyasagar Pandya, Madras.

Honorary Treasurer :—Mr. A. L. Ojha, Calcutta.

Secretary :—Mr. D. G. Mulherkar.

Office :—135, Canning Street, Calcutta.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 180. Of these numbers 20 represent banking institutions, 11 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 12 insurance companies 17 engineers and contractors, 130 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 300. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor

by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies :—

The Council of State one representative.

Legislative Council of the Governor of Bombay, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1935-36 and their representatives on the various public bodies :—

President.—L. A. Halsall, Esq.,

Vice-President.—A. K. G. Hogg, Esq.,

Committee.—W. A. Bell, Esq.; F. H. French, Esq.; J. F. Macdonell, Esq.; M.C.; R. Scherer, Esq.; F. Stones, Esq.; O.B.E.; D. D. Storran, Esq.; J. R. D. Tata, Esq.;

Secretary.—R. J. F. Sullivan, Esq.

Asst. Secretary.—H. Royal, Esq.

*Representatives on—**Council of State:* The Hon'ble Mr. R. H. Parker.*Bombay Legislative Council :* J. B. Greaves, Esq., M.L.C.; L. A. Halsall, Esq.*Bombay Port Trust :* G. H. Cooke, Esq.; A. K. G. Halsall, Esq.*Bombay Telephone Company, Ltd. :* G. L. Winterbotham, Esq., M.L.C.*Railway Rates Advisory Committee :* G. C. R. Coleridge, Esq.; L. A. Halsall, Esq.; J. F. Macdonell, Esq.; C. J. Damala, Esq.*Government of Bombay Road Board :* G. O. Pike, Esq.*Bombay University :* G. L. Winterbotham, Esq., M.L.C.**Special Work.**

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in this certificate the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy Season are now on duty early and late.

Associated Chamber of Commerce of India.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1936.
President: Sir Edward Benthall, Kt.

Millowners' Association, Bombay.

The Millowners' Association, Bombay, was established in 1875 and its objects are as follows:—

- (a) To encourage friendly feeling and unanimity amongst Millowners and users of steam, water and/or electric power on all subjects connected with their common good.
- (b) To secure good relation between members of the Association.
- (c) To promote and protect the trade, commerce and manufactures of India in general and of the cotton trade in particular.
- (d) To consider questions connected with the trade, commerce and manufactures of its members.
- (e) To collect and circulate statistics and to collect, classify and circulate information relating to the trade, commerce and manufactures of its members.

Any individual partnership or company owning one or more mill or mills or one or more press or presses or one or more gruing or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1935 numbered 104.

The following is the Committee for 1936:—

Mr. V. N. Chandavarkar (*Chairman*); Mr. Dharamsey Mulraj Khatau (*Dy. Chairman*); Sir Ness Wadia, K.B.E., C.I.E.; Sir Chunilal V. Mehta, K.C.S.I.; Sir Hormasji Mody, K.B.E., M.L.A.; Sir Joseph Kay, Kt.; Mr. T. V. Baddeley; Mr. B. D. Benjamin; Mr. R. L. Ferard; Mr. A. Geddis; Mr. Bhagwan-das Manmohandas Ramji; Mr. A. M. Mehta; Mr. H. F. Milne; Mr. A. Pether; Mr. S. D. Saklatvala, M.L.C.; Mr. F. Stones, O.B.E.; Mr. Krishnaraj M. D. Thackersey; Mr. C. P. Wadia; Mr. Neville N. Wadia; Mr. T. Maloney (*Secretary*); Mr. N. S. V. Aiyer (*Asst. Secretary*).

The following are the Association's Representatives on public bodies:—

Legislative Assembly: Sir Hormasji Mody, K.B.E., M.L.A.

Bombay Legislative Council: Mr. S. D. Saklatvala, M.L.C.

Bombay Port Trust: Mr. A. Geddis.

Victoria Jubilee Technical Institute: Mr. V. N. Chandavarkar.

Bombay Smoke Nuisances Commission: Messrs. W. F. Webb and Mark Binnie.

Advisory Board of Sydenham College of Commerce and Economics: Mr. Dharamsey Mulraj Khatau.

Indian Central Cotton Committee: Mr. S. D. Saklatvala, M.L.C.

Development of Bombay Advisory Committee: Mr. V. N. Chandavarkar.

G. I. P. Railway Advisory Committee: Mr. A. Geddis.

B. B. & C. I. Railway Advisory Committee: Sir Hormasji Mody, K.B.E., M.L.A.

Bombay Municipal Corporation: Sir Hormasji Mody, K.B.E., M.L.A.

University of Bombay: Mr. F. Stones, O.B.E.

Royal Institute of Science: Mr. B. D. Benjamin.

The Office of the Association is located at 2nd Floor, Patel House, Churchgate Street, Fort, Bombay, and the Telephone No. is 25350.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June 1924, as a Company limited by guarantee. The registered office of the Association is located in Patel House, Churchgate Street, Fort, Bombay.

The objects of the Association are:—

(a) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (b) the insurance or members of the Company against loss or damage by or incidental to fire, lightning, etc.; and (c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counterinsurances and counter-guarantees, etc., etc., etc.

The Association consisted of 56 members on 1st October, 1934.

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are:—
Mr. A. Geddis (*Chairman*).

Sir Ness Wadia, K.B.E., C.I.E., Sir Joseph Kay, Kt., Sir Chunilal V. Mehta, K.C.S.I., Ratansi D. Morarji, Esq., S. D. Saklatvala, Esq., F. Stones, Esq., O.B.E., H. J. Ramji, Esq., and A. C. M. Cursetjee, Esq., M.A., LL.B., Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

- (a) To encourage friendly feeling and unanimity among business community on all subjects connected with the common good of Indian merchants.

- (b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.
- (c) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.
- (d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.
- (e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies and in general to take the initiative to secure the welfare of the business community in all respects.
- (f) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.
- (g) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.
- (h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.
- (i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.
- (j) To secure the interests and well-being of the Indian business communities abroad.
- (k) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.
- (ii) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.
- (iii) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.

(iv) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.

(l) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

The following Associations are affiliated to the Chamber:—

- The Grain Merchants' Association.
- The Bombay Rice Merchants' Association.
- The Bombay Yarn, Copper and Brass Native Merchants' Association.
- The Bombay Shroff Association.
- The Bombay Pearl Merchants' and Jewellers Association.

Hon. Treasurer.—Mr. Mulji Laxmidas.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and oil-seeds trade on a sound footing." It is an influential body or large membership. The office holders for the current year are as follows:—

Chairman.—Mr. Peraj Khatan.

Vice-Chairman.—Mr. Ratansi Hirji.

Hon. Secretary.—Mr. Nathoo Cooverj.

Acting Secretary.—Mr. Ganpatram Narottam Raval.

The address of the Association is 262, Masjid Bunder Road, Mandvi Post, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba,

Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and Indian State adjoining these districts.

President.—Mr. Walchand Hirachand.

Vice-Presidents.—Mr. M. I. Dahanukar, Mr. D. R. Gharpure, Mr. V. R. Velankar.

Secretary.—Mr. D. V. Kelkar, M.A.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentlemen interested in the affairs and objects of the Chamber." All new members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 80 per annum per set containing monthly Import and Export Statements and Export Manifests and Non-Members Rs. 100 per set per annum) Rs. 10 per annum for the Weekly Price Current and Market Report. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, four representatives on the Karachi Port Trust, two on the Karachi Municipality and two on the North Western Railway Advisory Committee, Karachi. There were 58 members of the Chamber in January 1936. The following are the officers for 1936:—

Chairman.—Mr. G. H. Raschen, (Forbes, Forbes, Campbell & Co., Ltd.).

Vice-Chairman.—Mr. J. W. Anderson, (Grahams Trading Co. (India), Ltd.)

Members of Committee.—Mr. L. C. Buss, M.L.A. (Burmah-Shell Oil Storage and Distributing Co. of India, Ltd.); Mr. R. B. Fairclough, M.C. (Anglo-Siam Corporation, Ltd.); Mr. J. J. Flockhart, (Mackinnon Mackenzie & Co.); Mr. H. K. C. Hare, (Messrs. Ralli Brothers, Ltd.); Mr. B. W. Hawker, (Messrs. Bombay Co., Ltd.); Mr. A. K. Homan

(North Western Railway); Mr. J. Richardson (National Bank of India, Ltd.); Mr. C. I. Voegeli (Volkart Brothers).

Representative on the Bombay Legislative Council.—Mr. J. Humphrey, O.B.E.

Representatives on the Karachi Port Trust.—Messrs. H. S. Bigg-Wither, O.B.E., G. H. Raschen; J. W. Anderson and J. J. Flockhart.

Representatives on the Karachi Municipality.—Mr. A. W. Hutton, O.B.E.; M.C., and Mr. W. F. Enever.

Representatives on the North Western Railway Local Advisory Committee, Karachi.—Messrs. G. H. Raschen and C. W. Warrington.

Ag. Secretary.—Mr. H. M. Gomes.

Ag. Public Measurer.—Mr. J. G. Smith.

The following are the principal ways in which the Chamber gives special assistance to members:—The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers' finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and

surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber:—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 57 members and 9 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows:—

Chairman.—Mr. F. Birley.

Vice-Chairman.—Sir William Wright, O.B.E., M.L.C.

Committee.—Messrs. W. M. Browning, H. N. Colam, J. Nuttall, D. M. Reid, M.L.C., and A. S. Todd.

Secretary: G. Gompertz.

The following are bodies to which the Chamber is entitled to elect representatives and the representatives elected for the year:—

Madras Legislative Council: Sir William Wright, O.B.E., M.L.C.

Madras Port Trust.—Messrs. W. M. Browning, R. D. Denniston, D. M. Reid and H. S. Town.

Corporation of Madras.—Messrs. W. B. Horrocks, J. A. Rowland Knox and G. E. Walker.

Federation of Chamber of Commerce of the British Empire:—Mr. R. C. M. Strouts.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber registers trade marks, holds survey and arbitration issues certificates of origin and certifies invoices.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the

right of electing a representative to that body under the Madras City Municipal Act, 1919, the Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Board of Communications the Provincial Cotton Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rayapuram and Ophthalmic Hospitals, Income-tax Board of Referees, etc.

The Chamber has 482 members on the rolls and has its own building. Several Associations in the City of Madras and Chambers of Commerce Upcountry have been affiliated to this Chamber.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member resident or carrying on business in Cawnpore, Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of dis-

putes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 61 members, two honorary members and seven affiliated members.

The following are the officers:—

President.—Mr. Harry Horsman, M.C., (The Swadeshi Cotton Mills Co., Ltd.). *Vice-President*.—Mr. J. M. Lowrie, (Messrs. Begg Sutherland & Co., Ltd.). *Members*.—Mr. Jung Bahadur Mirhoultra, (Messrs. Moonna Lal & Sons); Mr. E. J. W. Plummer, (The Swadeshi Cotton Mills Co., Ltd.); Mr. K. J. D. Price, (The Muir Mills Co., Ltd.); Rai Bahadur Babu Ram Narain Sahab, (Cawnpore); Rai Bahadur Lala Rameshwar Pershad Bagla, (Messrs. Gangadhar Baijnath); Mr. J. Tinker, (The British India Corporation, Ltd.); Mr. H. A. Wilkinson, (Messrs. Begg, Sutherland & Co., Ltd.); and Mr. Desmond Young, (The "Pioneer" Ltd.). *Representatives on the United Provinces Legislative Council*.—Mr. E. M. Squier, C.I.E., M.L.C., (Messrs. Ford & Macdonald Ltd.); The Hon'ble Sir Jwala Prasad Srivastava, Kt., M.L.C., (Cawnpore).

Secretary.—Mr. H. W. Morgan.

Head Clerk.—Babu B. N. Ghosal.

MERCHANTS' CHAMBER OF UNITED PROVINCES, CAWNPORE.

The Merchants' Chamber of United Provinces was established in November 1932 with the object of safeguarding the interest of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership, Cotton Mills, Sugar Mills, Jute Mills, Silk weaving and Hosiery work, Banks and Firms engaged in extensive dealings in Piece-goods, country produced Hide and Leather. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of

general or of specific interest. It issues every month an English and Hindi Bulletin among its members who are scattered over the entire province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The constitution of the Chamber which is registered under Indian Companies Act, 1913, with a licence under Section 26, provides for an Executive consisting of 1 President, 2 Vice-Presidents and 18 ordinary Members of the Council. A whole-time Secretary is attached to the organisation. The principal Office Bearers for the year 1936 are as follows:—

President.—Mr. S. M. Bashir.

Senior Vice-President.—Sardar Inder Singh.

Junior Vice-President.—Mr. Ram Ratan Gupta.

Secretary.—Mr. K. M. Purkayastha, M.A.

UNITED PROVINCES CHAMBER OF COMMERCE, CAWNPORE.

The United Provinces Chamber of Commerce was established in 1914, and represents all the important commercial and industrial interests of the Province. The following are the members of the Chamber which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras:—

Members.—The Coromandel Co., Ltd., Ripley & Co., Gordon Woodroffe & Co. (Madras), Ltd., Innes & Co., Wilson & Co., Northern

Circulars Development Co., Burmah-Shell Oil Storage and Distributing Co., of India Ltd. The Agent, Imperial Bank of India, Deccan Sugar and Abkhari Co., Ltd. and Parry & Co., Ltd.

MEMBERS OF THE COMMITTEE.

Mr. S. A. Cheesman (Chairman).
" H. F. Ferguson.
" C. C. R. Reynolds.
" G. M. Lake (Secretary).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All-India statistics.

The Government of India felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they established in 1933 the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. The Director-General is now stationed at the headquarters of the Government of India with a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics at Calcutta and a new Deputy Director of Statistical Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes:—Review of the Trade of India, Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops, the Monthly Survey of Business Conditions in India and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (a) information as to tariff changes in foreign countries which affect Indian interests (b) notices of tenders called for and contracts placed by Government departments and public bodies, (c) crop reports and forecasts, (d) Government orders, communiques and other

notifications affecting trade, (e) analysis of Indian trade statistics, (f) market reports, price and trade movements of the staple exports and imports, (g) trade enquiries for securing trade introductions, and (h) quarterly and annual reports of the Indian Trade Commissioners abroad and summaries of the leading features of consular and other trade reports.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into first-class technical library containing over 15,922 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 369 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Hamburg and Milan, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world; who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions and prospects of trade in his area; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters,

He is also expected to supply a regular flow of commercial information of all kinds to his department; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area; and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

H. M.'s TRADE COMMISSIONERS IN INDIA.

Calcutta—

Sir Thomas M. Ainscough, C.B.E.,

His Majesty's Senior Trade Commissioner in India and Ceylon.

Mr. A. Schofield,

His Majesty's Trade Commissioner at Calcutta.

Post Box No. 683, Fairlie House, Fairlie Place.

Telegraphic Address—"Tradcom, Calcutta."

Telephone No. "Calcutta 1042."

Bombay—

Mr. W. D. M. Clarke,

His Majesty's Trade Commissioner at Bombay.

Post Box No. 815, 3, Wiltet Road, Ballard Estate.

Telegraphic Address—"Tradcom, Bombay"

Telephone No.—"Bombay 23095."

Ceylon—

Imperial Trade Correspondent,

The Principal Collector of Customs' Colombo.

THE INDIAN CENTRAL COTTON COMMITTEE.

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommenda-

tions was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters,

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows:—

INDIAN CENTRAL COTTON COMMITTEE. MEMBERS:

President.—Sir Bryce C. Burt, Kt., C.I.E., M.B.E., I.A.S., Vice-Chairman, Imperial Council of Agricultural Research, *ex-officio*.

(a) The Expert Adviser to the Imperial Council of Agricultural Research in Agricultural matters, *ex-officio*.

REPRESENTATIVE OF AGRICULTURAL DEPARTMENTS.

Madras.—M. R. Ry. Rao Bahadur D. Ananda Rao Garu, I.A.S.

Bombay.—The Director of Agriculture.

United Provinces.—Mr. J. H. Ritchie, I.A.S., Director of Agriculture.

Punjab.—The Director of Agriculture.

Central Provinces.—Mr. J. C. McDougall, I.A.S., Director of Agriculture.

Burma.—Mr. F. D. Odell, I.A.S., Deputy Director of Agriculture, West Central Circle, Magwe.

Director-General of Commercial Intelligence and Statistics, *ex-officio*.

REPRESENTATIVES OF CHAMBERS OF COMMERCE AND ASSOCIATIONS.

The East India Cotton Association, Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E. (*Vice-President*).

The Bombay Millowners' Association, Mr. S. D. Saklatvala.

The Bombay Chamber of Commerce, Mr. A. A. Sarantides.

The Indian Merchants' Chamber, Mr. Chunilal B. Mehta.

The Karachi Chamber of Commerce, Mr. G. C. R. Coleridge.

The Ahmedabad Millowners' Association, Seth Sakarlal Balabhai.

The Tuticorin Chamber of Commerce, Mr. J. Vonesch.

The Upper India Chamber of Commerce, Mr. J. Tinker.

The Empire Cotton Growing Corporation, Mr. W. Roberts, C.I.E.

COMMERCIAL REPRESENTATIVES NOMINATED BY LOCAL GOVERNMENTS.

Central Provinces.—Mr. Y. G. Deshpande, Rao Bahadur G. R. Kothare, M.L.C.

Madras.—Mr. J. Nuttall.

Punjab.—Khan Bahadur Sardar Habibullah, M.L.C.

Bengal.—Mr. Akhil Bandhu Guha.

CO-OPERATIVE BANKING REPRESENTATIVE.

Rao Bahadur M. G. Deshpande, C.B.E.

REPRESENTATIVES OF COTTON- GROWING INDUSTRY.

Madras.—Mr. K. S. Ramaswami Gownder, M. R. Ry. Rao Bahadur B. P. Sesha Reddi Garu.

Bombay.—Sardar Rao Bahadur Bhimbhai. Ranchodji Naik, M.L.C., Rao Bahadur C. S. Shirahatti.

United Provinces.—Khan Bahadur Shah Nazar Husain, M.L.C., Rai Bahadur Lala Anand Sarup, M.L.C.

Punjab.—Sardar Sampuran Singh, M.L.C., Mian Nurulla, M.L.C.

Central Provinces and Berar.—Mr. N. M. Deshmukh, Mr. J. B. Deshmukh.

REPRESENTATIVES OF INDIAN STATES.

Hyderabad State.—Mr. Nizam-ud-din Hyder, Director of Agriculture.

Buroda State.—Mr. R. G. Allan, C.I.E., Director of Agriculture.

Gwalior State.—Mr. H. H. Pandya, Director of Agriculture.

Rajputana and Central India States.—Mr. F. K. Jackson, Director, Institute of Plant Industry, Indore.

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR-GENERAL-IN-COUNCIL.

Mr. D. N. Mahta, Economic Botanist for Cotton, Central Provinces.

Rao Bahadur S. S. Salimath, Deputy Director of Agriculture, Southern Division, Dharwar.

M. R. Ry. V. Ramanatha Iyer, Ayl., Cotton Specialist, Coimbatore.

Musahib-i-Khas Bahadur S. V. Kanunga, Finance Minister, Holkar State, Indore.

Mr. W. J. Jenkins, I. A. S., Chief Agricultural Officer in Sind, Post Box 337, Karachi Saddar.

Seth Isserdas Varindmal, Representative of the Karachi Indian Merchants' Association.

Mr. P. B. Richards, I.A.S., Entomologist to Government, United Provinces, Cawnpore.

Khan Bahadur Nawab Fazl-i-Ali Khan, Chairman, District Board, and President, Central Co-operative Bank, Ltd., Gujrat (Punjab).

Khan Sahed Farrukhbeg Sadikalibeg Mirza, Nawabshah, Sind.

Lala Shri Ram, Representative of the Cotton Millowners of Delhi.

Dr. V. K. Budami, Ph.D., Deputy Director of Agriculture, Department of Agriculture in Mysore State, Bangalore.

Mr. Chellaram Shewaram, Representative of the Karachi Cotton Association, Ltd.

Dewan Bahadur Sir T. Vijayaraghavacharya, K.B.E.

Secretary.—Mr. P. H. Rama Reddi, I.A.S.

Publicity Officer.—Mr. R. D. Miha.

Director, Technological Laboratory.—Dr. Nazir Ahmed.

Office.—Vulcan House, Nicol Road, Ballard Estate, Bombay.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and the Central Provinces and of the Baroda, Rajpipla, Chhota Udepur, Hyderabad, Indore, and Sangli States and with excellent results.

The Cotton Ginning and Pressing Factories Act (XII of 1925) subsequently passed provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing, and the effect of "pools" of cotton ginning and pressing factories on the price paid to the growers for their produce. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of medium staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cotton growing industry, thus

enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced research workers in India. Scholarships for training abroad are also sometimes granted.

Statistics.—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to (1) Indian raw cotton consumed in spinning mills in India, (2) exports by sea and receipts at mills of Indian cotton classified by varieties, (3) stocks of cotton held on the last day of the season by the trade at important cotton centres in India, and by the mills, and (4) loose cotton received in the spinning mills of the major cotton growing provinces, the establishment of weekly statistical returns relating to the number of bales of raw cotton pressed in India, and the revival of rail-borne trade statistics for cotton are some of the results already achieved by the Committee in this direction.

Research.—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental, spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants-in-aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number thirty.

The Committee also assists by means of grants to Agricultural Departments in Provinces and States and to Co-operative Cotton Sale Societies in the wider distribution of seed of improved varieties of cotton. There are 13 such schemes in operation at present.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Mucadums' Association, Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defences of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October 1932. With effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows:—

Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E. (*President*); Haridas Madhavdas, Esq. (*Vice President*); Buyers' Panel; Ramnivas Ramnarain, Esq., Buyers' Panel; J. Vonesch, Esq., Buyers' Panel; Chandrakant Mulraj, Esq., Buyers' Panel; Tulsiidas Kilachand, Esq., Buyers' Panel; Patechand Jhunjhunwala, Esq., Sellers' Panel; Kishan Prasad, Esq., Sellers' Panel; Bhavanji A. Khimji, Esq., Sellers' Panel; Begraj Gupta, Esq., Brokers' Panel; Chunilal B. Mehta, Esq., Brokers' Panel; Ramdeo Anandlal Podar, Esq., Brokers' Panel; Hargovindas Jeevandas, Esq., Brokers' Panel; Ratilal T. Thaker, Esq., Brokers' Panel; Brijlal Ramjidas Rungta, Esq., Brokers' Panel; Sardar Rao Bahadur Bhimbhai R. Nalk, M.L.C. N. M. Deshmukh, Esq., M.A. (Cantab) Bar-at-Law; Sardar Sampuran Singh, Bar-at-Law, M.L.C., Growers' Representatives nominated by the Indian Central Cotton Committee; Rao Bahadur C. S. Shirhatti; Behramsha K. Bharucha, Esq., Growers' Representatives nominated by the Government of Bombay.

Officers

D. Mehta, Esq., B.A., Secretary, C. M. Parikh, Esq., B. Com., Assistant Secretary, A. R. Menezes, Esq., Manager, Clearing House.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade; to establish just and equitable principles in the said Trade; to maintain uniformity of control of the said trade; to fix or adopt standards of classification of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or aid in bringing, prosecuting, or defending, any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association, and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 391 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslims human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They receive an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 523,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and

induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread rule followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1934-35 the total area in all territories reported on was computed at 23,830,000 acres and the total estimated outturn was 4,807,000 bales of 400 lbs. as compared with 24,136,000 acres and 5,068,000 bales in 1933-34.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop:—

Provinces and States.	1933-34 (Provisional Estimates).		1934-35. (Provisional Estimates).	
	Acres in Thousands.	Bales of 400 lbs. (In thousands).	Acres in Thousands.	Bales of 400 lbs. (In thousands).

TOTAL	3,926	2,369	2,063	2,740	3,446

Bombay is the great centre of the cotton trade. The principal varieties are Dholleras Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the glass of cotton produced, by seed selection; hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success; they have not proceeded far enough to lighten the

whole outturn, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701; prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years:—

	1931-32.	1932-33.	1933-34.	1934-35.

FOREIGN TERRITORY.				
Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwalior (Ujjain), Kishan-garh, Cambay, Kolhapur, Cochin, Rajkot, Ratlam, Travancore (a) and the French Settlements at Pondicherry ..	118,247,364	130,649,685	124,340,193	148,179,003
GRAND TOTAL	966,373,020	1,016,421,864	921,060,983	1,000,755,803

(a) Figures for Travancore are being reported from October 1934.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 53 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 20.8 per cent. while Bengal and the Central Provinces produced 4.3 and 4.6 per cent. Elsewhere the production is as yet very limited.

BOMBAY ISLAND.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island :—

—	1929-30.	1930-31.	1931-32.	1932-33.	1933-34.	1934-35.

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produced in 1933-34 nearly 64·4 per cent. of the cloth woven in India. The United Provinces produced 7·3 per cent., the Central Provinces 2·9 per cent. and Madras 3·1 per cent. Grey and Bleached goods represent nearly 77·75 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:—

—	1930-31.	1931-32.	1932-33.	1933-34.	1934-35.
Grey and Bleached piece-goods—

* Year ending 31st August.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of reha, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Serajunge, and India Jute

Company. On the working of their first half year, a 15 per cent interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent premium. The dividend for the first year, ending August 1873, was 25 per cent, for 1874, 20 per cent.; and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Port Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghata-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhaty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titagur, Victoria and Kankarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajunge), and the Kinnison. A full of four years witnessed large extensions to the existing mills after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hukumchand, Birla, Shree Hanuman, Gagalbhai, Premchand and Agarpara Mills, which—with the exception of the last-named—are under Indian ownership.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows **quinquennial averages** from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1931-32 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 :—

Average—	Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed daily (average.)	Looms.	Spindles.
1879-80 to 1883-84 ..	21 (100)	270.7 (100)	38.8 (100)	5.5 (100)	88 (100)
1884-85 to 1888-89 ..	24 (114)	341.6 (126)	52.7 (136)	7 (127)	138.4 (157)
1889-90 to 1893-94 ..	26 (124)	402.6 (149)	64.3 (166)	8.3 (151)	172.6 (196)
1894-95 to 1898-99 ..	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (278)
1899-1900 to 1903-04 ..	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (380)

1932-33 ..	99 (471)	2,370.6 (878)	263.4 (678)	60.5 (1,100)	1,202.1 (1,366)

* Revised.

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84 :—

	Jute manufactures.		Value in lakhs of Rs.
	Gunny bags in millions of number.	Gunny cloths in millions of yards.	
1879-80 to 1883-84 ..	54.9 (100)	4.4 (100)	124.9 (100)
1884-85 to 1888-89 ..	77 (140)	15.4 (350)	182.9 (130)
1889-90 to 1893-94 ..	111.5 (203)	41 (932)	289.3 (232)
1894-95 to 1898-99 ..	171.2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04 ..	206.5 (376)	427.2 (9,709)	826.5 (662)
1904-05 to 1908-09 ..	257.8 (469)	698 (15,864)	1,442.7 (1,154)
1909-10 to 1913-14 ..	339.1 (618)	970 (22,046)	2,024.8 (1,621)
1914-15 to 1918-19 ..	667.6 (1,216)	1,156 (26,273)	4,019.3 (3,218)
1919-20 ..	342.7 (624)	1,275.1 (28,980)	5,001.5 (4,004)
1920-21 ..	533.9 (987)	1,352.7 (30,800)	5,299.4 (4,278)
1921-22 ..	886.7 (1,615)	1,120.5 (25,000)	2,999.6 (2,419)
1922-23 ..	844.2 (1,537)	1,254.3 (28,050)	4,049.4 (3,265)
1923-24 ..	413.7 (752)	1,348.7 (30,652)	4,228.3 (3,382)
1924-25 ..	425.1 (774)	1,456.2 (32,095)	5,148.8 (4,122)
1925-26 ..	425.0 (774)	1,461.3 (32,211)	5,752.1 (4,605)
1926-27 ..	449.0 (818)	1,503.1 (34,161)	5,283.3 (4,222)
1927-28 ..	463.1 (843)	1,552.7 (35,289)	5,321.8 (4,260)
1928-29 ..	497.6 (906)	1,568.2 (35,640)	5,656.4 (4,528)
1929-30 ..	522.3 (951)	1,650.5 (37,511)	5,158.7 (4,130)
1930-31 ..	434.0 (790)	1,270.9 (28,884)	3,148.8 (2,521)
1931-32 ..	388.5 (707)	1,021.0 (23,204)	2,138.6 (1,712)
1932-33 ..	415.0 (756)	1,011.7 (22,993)	2,139.7 (1,718)
1933-34 ..	401.6 (732)	1,052.5 (23,920)	2,110.6 (1,690)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the export showed an increase, as compared with the average of the war quinquennium (1914-15 to 18-19). In the following two years, the export recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons.

The total quantity of jute manufacture exported by sea from Calcutta during the year 1922-23 was 608,000 tons as against 639,000 tons in the preceding year and 603,500 tons in the pre-war year 1913-14. The values of these exports amounted to Rs. 40.28 lakhs, or an increase of Rs. 10.36 lakhs over the preceding year and Rs. 12.08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15.82 lakhs and of gunny cloth Rs. 24.24 lakhs as against Rs. 13.86 and Rs. 15.92 lakhs respectively in the preceding year and Rs. 12.48 and Rs. 15.58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36.4 and Rs. 31. In 1917-18 it dropped to Rs. 38-8-0 but rose again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65 but rose again to Rs. 86. It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but

fell back again to Rs. 50 at the end of November and recovered at Rs. 64 at the close of the year.

Average price of jute ordinary, per bale of 400 lbs.

Assam	148,600	112,400
Total ..	2,670,100	1,947,000

† Including Nepal.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new marks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are:—
Chairman.—Mr. H. H. Burn.
Members of Committee:—

Mr. Sheokissen Bhatier, Mr. J. H. Burdes,
Mr. P. S. Macdonald, Mr. M. P. Thomas,
Mr. W. A. M. Walker, Mr. D. Wilson.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional

amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year, or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. During the past 10 years a policy of curtailment of output has been continuously in force. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent. of the trade, worked during 1932, 1933 and the greater part of 1934 for 40 hours per week, with 15 per cent. of the

total complement of looms sealed; and the agreement incorporated a clause which provided that the mills would not instal any extra productive machinery or relative buildings during the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2½ per cent. of the total complement of looms were unsealed, and was continued throughout 1935, a further 2½ per cent. of looms being unsealed on 1st May 1935, 2½ per cent. on 5th August and 2½ per cent. on 11th November. The remaining 5 per cent. of looms were unsealed on the 17th February 1936. Throughout this time the mills, with five exceptions, continued to restrict their working hours to 40 per week. The five exceptions, namely, Prenchand, Craig, Waverley, Megna and Nuddea had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was superseded by an agreement, operating from the 1st April 1936, under which the mills will be permitted to work up to but not exceeding 54 hours per week on single shift, with no night work. As in the old agreement, this new agreement incorporates a clause which restricts the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

In addition to the above working agreement which applies only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by either party, which notices of termination could not be given before 1st July 1934. On the 30th September 1935 the Association gave notice to terminate this agreement with the outside mills on the 31st March 1936. No new agreement with these mills has yet been entered into.

An Association, styled the **Calcutta Jute Dealers Association**, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mills in and around Calcutta. The present Committee is—Mr. A. C. Robertson, *Chairman*. *Members*—Mr. H. A. Luke, Mr. B. Meyer, Mr. B. B. Simpson, Mr. A. H. Syme and Mr. C. H. Thomas.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that

of the previous year, viz., 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 103 mills at work throughout the year 1931-32 with 61,426 looms and 1,220,586 spindles. The number of persons employed was 263,442. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1934-35 was 423 million bags but the value decreased from Rs. 15,82 lakhs to Rs. 10,25 lakhs. Shipments of gunny cloth decreased from 12,51 million yards to 10,63 million yards but valued Rs. 24,24 lakhs and Rs. 10,99 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp plant** (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength. It was valued at £18 per ton with Birmilpatam jute at £12 10s., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary; and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt

that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent. from 187,412 cwts. to 259,487 cwts. and the value from Rs. 26.93 lakhs to Rs. 36.68 lakhs.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan. Imports of raw wool in 1933-34 decreased from 7.2 million lbs. valued at Rs. 42 lakhs to 5.1 million lbs. valued at Rs. 34 lakhs. Australia with her contribution of 2.8 million lbs. valued at Rs. 18 lakhs still remained the largest supplier, although this quantity was less by 0.2 million lbs. as compared with imports from that country in 1932-33.

Production in India.—The production of wool in India is estimated at 60 million lbs., the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of mills in British India in 1930, the latest year for which details are available, was 12 of which five were in the United Provinces. The paid up capital of these mills was Rs. 68,28,576 and the number of looms and spindles was 1,447 and 69,293 respectively. The average number of persons employed daily in these mills was 4,240. There are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,879 lbs. valued at Rs. 1,17,99,396. As regards Indian States there are four woollen mills in Mysore which produced woollen goods of 2,700,201 lbs. in weight in 1930, the value being Rs. 17,83,256. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself. Imports of woollen piecegoods in 1932-33 increased by over 8 million yards as compared with the preceding year, and even exceeded the imports of 1929-30 by about a million yards. Imports came chiefly from France, Italy, Japan and the United Kingdom. There was a considerable increase in the number of woollen shawls imported in 1932-33, Germany being the largest single source of supply. Imports of carpets and floor-rugs declined to 188,000 lbs. in 1932-33 from 267,000 lbs. in 1931-32. The share of Persia in this trade receded considerably, but imports from the United Kingdom rose.

Blanket weaving and carpet manufacture are carried on in various parts of the country notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China,

has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

India has three well-known purely indigenous silkworms; the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially these of the great central table-land, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The *eri* Silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival.

It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macanlay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *ai* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo.

According to him, the future of natural indigo is by no means a hopeless one provided steps are taken to realise such improvements as are clearly possible. Indigo soils have deteriorated due to lack of proper manuring. Continual cropping has resulted in phosphate starvation. This can be checked by proper manuring with super-

phosphates. Improvements by botanical selection and better business organisation and methods of marketing the product will also aid in hastening recovery.

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in

1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

Exports of indigo made a slight recovery in 1933-34 and amounted to 500 cwts. as against 300 cwts. in 1932-1933.

OILS AND OIL CAKES.

Oilseeds.—The total exports of Indian Oilseeds of all kinds improved in quantity from 7,33,000 tons in 1932-33 to 11,24,000 tons in 1933-34 and from Rs. 11.31 lakhs to Rs. 13.66 lakhs in value. The exports of oil cakes showed a very slight increase from 2,36,700 tons to 2,87,000 tons in 1933-34 but the value recorded fell away from 197 lakhs to 165 lakhs.

A pamphlet on the subject which was published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an oil-milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern, and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promis-

ing and attractive that speculators eagerly rushed into it. The discovery of the indigenous tea in Sylhet and Cachas gave the impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the province of Assam (both Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1875 :—

Progress of the Industry.

Year.	Area under tea in 000 acres.	Production in 000,000 lbs.	Year.	Area under tea in 000 acres.	Production in 000,000 lbs.
1875-79 (average).	173	34	1927 (average).	690	361
1880-84	241	57	1928	702	372
1885-89	307	90	1929	712	401
1900-1904	500	195	1930	802	391
1910	533	249	1931	807	394
1915	594	352	1932	809	433
1920	654	322	1933	816	383
1925	672	335	1934	819	399
1926	679	364			

It will be seen from the above table that during the last sixty years, while the area under tea has risen by over 400 per cent., the production has increased more than ten times.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

The following table shows the relative importance of the various provinces from the point of view of the tea industry:—

Province.	Area under crop '000 acres.	Production '000 lbs.	Average daily working strength (permanent and temporary.)
Assam	430	219,341	517,208
Bengal	193	96,658	186,394
Madras	74	29,295	66,371
Coorg	*	209	401
Punjab	10	2,111	10,697
United Provinces	6	1,733	3,312
Bihar and Orissa	3	1,094	3,177
Total British India	721	350,442	786,760
Indian States	88	32,822	77,743
Total India	809	383,264	864,503

* Less than 500 acres.

Although India produces such large quantities of tea its consumption of tea is comparatively very little, about 74 million lbs. as compared with 421 million lbs. in the United Kingdom and the consumption per head is only .21 lb. as compared with 9.20 lbs. in the United Kingdom. The low domestic consumption, however, enables India to export large quantities to other countries the principal among which is the United Kingdom. It is estimated that India supplies about 40 per cent. of the world demand of this commodity. In 1934-35, 81 per cent. of the total quantity of tea produced in India was exported abroad.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1932. During the first year of its operation the hopes engendered by the regulation scheme were, to a considerable extent, justified, and the industry was enabled to meet what were undoubtedly very disturbing conditions. During the year 1934-35, which was the second year of the working of the scheme, the results were however, not so satisfactory. In common with other commodities tea seems to have suffered from the diminished purchasing power of consumers and the restriction on international trade. A feature of the year was the shifting of demand from the higher to the lower and medium grades of tea.

The following table explains briefly the position as regards the export of tea from India :—

Year.	Amount exported (million of lbs.)	Value in lakhs of rupees.
1	2	3
1926-27	349	29.04
1927-28	362	32.48
1928-29	360	26.60
1929-30	377	26.01
1930-31	356	23.56
1931-32	341	19.44
1932-33	379	17.15
1933-34	318	19.85
1934-35	325	20.13

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports :—

	1928-29 per cent.	1934-35 per cent.
To United Kingdom ..	83.0	88.9
To Rest of Europe ..	2.0	..
To Asia	5.8	1.1
To America	5.7	6.8
To Australia	1.6	0.5
To Africa	1.9	2.7
	100	100

The following table gives the average wholesale prices of tea in Mincing Lane from 1922-30, in pence per lb. :—

Year.	North India.	South India.
1922	15.46	14.00
1923	18.76	18.14
1924	19.92	19.02
1925	17.68	17.62
1926	19.36	19.00
1927	19.01	18.88
1928	16.49	15.40
1929	15.72	15.35
1930	14.69	14.52

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at the Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. The position, however, improved considerably during 1933-34, when the prices realised averaged 8 as. 1 p.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11=100 :—

	Average price at auction sales.	
	Price per lb. As. p.	Index Number.
1901-02 to 1910-11 ..	6 0	100
1927-28	14 10	247
1928-29	11 4	189
1929-30	9 11	165
1932-33	5 2	86
1933-34	9 7(a)	160(a)
1934-35	5 2(b)	86(b)

(a) For teas sold with export rights.

(b) for internal consumption.

The fall in tea prices greatly affected the profits of tea companies. The following table which shows the profit per acre of 65 tea companies gives an idea of the effect on profits of the fall, in prices :—

Profit per Acre of 65 Indian Tea Companies.

	1913.	1924.	1928.	1929.
Average profit per mature acre	£ 6-10-7	£ 15-2-0	£ 10-0-0	£ 6-9-0
Average profit in pence per lb.	2.6	6.4	3.84	2.26
Average crop per mature acre	599 lbs.	560 lbs.	626 lbs.	684 lbs.

It is quite clear from the above table that, although the yield per acre has considerably increased, the profits per acre are actually lower than in 1913.

The main reasons of the slump in the tea industry are over-production and intense competition, particularly from Java and Sumatra. In order to counteract the adverse influence of the former, an agreement to restrict output, was reached early in 1930 by associations of tea-growers. For India and Ceylon the degree of restriction to be undertaken varied according to the quality of the tea produced, being greater for the lower qualities than for the finer.

According to the latest agreement between the Indian, Ceylon and Netherlands East Indies producers, for five years from 1933 onwards exports are to be restricted and extension of cultivation not to be permitted beyond $\frac{1}{2}$ per cent. of the present planted area.

During the year 1932-33 there was a considerable fall in the wages of workers on tea plantations. The average wages of men, women and children in the Assam Valley were Rs. 10-10-4, 7-14-6 and 5-11-6, respectively, as compared with Rs. 12-8-5, 9-8-7 and 6-15-8, respectively, in 1931-32.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1933-34 (including plantations of less than 10 acres) was nearly 183,000 acres, an increase of 23 per cent. over the figures for 1925-26.

The total exports of coffee increased from 1,50,000 cwts. in 1926-27 to 2,77,000 cwts. in 1927-28. In 1928-29 and 1929-30 the shipments declined and amounted to 1,98,000 cwts. and 1,84,000 cwts. respectively, but exports again rose in 1930-31 and amounted to 2,93,000 cwts. In 1931-32 the shipments declined to 1,56,000 cwts. but in 1932-33 exports again rose and amounted to 1,73,000 cwts. There was a further rise during 1933-34, the total

exports amounting to 186,000 cwts. The principal destinations of Indian Coffee are the United Kingdom and France, shipments to France rose from 54,000 cwts. in 1932-33 to 57,000 cwts. in 1933-34 while those to the United Kingdom declined from 52,000 cwts. to 50,000 cwts. Other European countries, namely, Italy, Germany and Belgium increased their demands from 5,000 cwts., 13,000 cwts. and 7,000 cwts. to 9,000 cwts., 17,000 cwts. and 15,000 cwts. respectively, while the demand from Norway and Netherlands decreased by 1,600 cwts. and 1,000 cwts. respectively. shipments to Iraq and Australia (including New Zealand) recorded a decrease while there was an increase in the shipments to Bahrain Islands.

Not only does India export coffee in large quantities but it also imports it chiefly from Java, Ceylon and the Straits Settlements which it re-exports to Mascot Territory, Iraq and the Bahrain Islands. During 1933-34, however, there were no imports of Coffee in to India.

The following table gives the figures of the production and exports of Indian coffee :—

Production and Export of Indian Coffee in thousands cwts.

12Months ending June 30th.	Production.	Export.	Surplus available for Home consumption.
1925	272.1	251.9	20.2
1928	317.5	260.9	56.6
1929	247.8	142.6	105.2
1930	352.0	245.0	109.0
1931	294.4	205.4	86.0
1932	300.1	162.0	138.1
1933	289.4	168.7	120.7
1934	308.8

Making allowance for the re-exports from India of imported coffee, the consumption of Coffee in India in 1933 was approaching six times the amount consumed in 1925.

The total production of cured coffee in India during the season 1933-34 was 34.6 million lbs. as compared with 32½ million lbs. during the previous season. The Indian Coffee industry like many other industries, has been hit in recent years and has begun to feel the necessity for propaganda, improvement of marketing and agricultural and technological researches with these objects in view the planting interests in South India have recommended the passing of a Coffee Cess Act on the lines of the Indian Cotton Cess Act.

The daily average number of persons employed in the plantations during 1933-34 was returned at 103,948 of whom 66,003 were permanently employed (namely, garden labour 43,556 and outside labour 22,447) and 37,945 temporarily

employed (outside labour), as compared with 101,174 persons (21,210 garden and 43,126 outside labour permanently employed and 36,868 temporary outside labour) in 1932-33.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s. in 1923 and 127s. in 1929 it fell to 86s. in 1930.

The declared value per cwt. of coffee was Rs. 60-11-9 in 1931-32 as against Rs. 65-8-1 in 1930-31. It rose to Rs. 63-6-7 in 1932-33, but fell to Rs. 55-14 in 1933-34 and further (declined to Rs. 51-0-3 in 1934-35).

Sugar.

Sheltered behind an adequate tariff wall, the Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages—consequences of the depression—have helped the rapid growth of the industry. Low prices of land and material, as also of machinery—all these factors have contributed to the remarkable development of the industry. As a result, India is now the largest sugar producing country in the world. And, the capital invested in the industry is variously estimated at between Rs. 30 and Rs. 25 crores.

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931. In addition, a revenue surcharge of 25 per cent. (amounting to Re. 1-13 per cwt.) was imposed in September, 1931. In accordance with the Tariff Board's recommendations,

Government issued a *communiqué* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. on all classes of sugar until March 31, 1938. A further enquiry before the end of that period into the question of continuing protection to the industry was also provided for. At present, therefore, the total import duty on foreign sugar amounts to Rs. 9-1 per cwt.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt. to be distributed among the provinces "for the purpose of assisting the organisation and operation of co-operative societies among the cane-growers so as to help them in securing 'fair' prices." Allowing for the excise duty, the industry now enjoys a protection of Rs. 7-12 per cwt.

Statistics given below, show the progress of the industry in recent years:—

Year.	No. of Factories.	Quantity of sugar manufactured from cane. Tons.	Quantity of sugar refined from gur. Tons.	Quantity of Khandasari production. Tons. (Est.)	Total quantity of sugar. Tons.
1929-30	27	89,768	21,150	200,000	310,918
1930-31	29	119,589	31,791	200,000	351,650
1931-32	32	158,581	69,539	250,000	478,119
1932-33	57	290,177	80,106	275,000	645,283
1933-34	112	453,965	61,094	200,000	715,059
1934-35	139 (Est.)	578,000	40,000	160,000	849,000

Area under sugarcane increased to 4,100,000 acres in 1935-36.

The area under cultivation of sugar-cane has kept pace with increased production; from 2,677,000 acres in 1929-30, it has increased to 4,100,000 acres in 1933-34. Prior to 1932-33, there were only 31 cane factories; 25 new factories were added in 1932-33 alone while another 65 new factories were started in the following year—an increase of 400 per cent. in two years. Since 1933-34, about 30 new factories of large cane crushing capacity have been established, and in 1934-35, no less than 139 factories were working. Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (*gur*) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931-32, the volume of factory produced sugar has increased by approximately 400 per cent.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up to 1930-31, im-

ports fell by about 45 per cent. in the following year and dropped to about 250,000 tons in 1933-34 and decreased further to 2,21,000 tons in 1934-35. As a result of dwindling imports, Government are losing revenue from this source. Despite, or may be because of, the heavy duty, the yield from this source diminished from over Rs. 10 crores in 1930-31, to about Rs. 3.81 crores for the financial year ended March 31, 1935, and 3.23 crores for the year ended March 31st, 1936. The imposition of the excise duty at the rate of Rs. 1-5-0 per cent. on factory sugar, and Rs. 0-10-0 on khandsari sugar, from April 1st, 1934, has yielded a revenue to the Government of Rs. 97,22,000 in 1934-35, and Rs. 1,58,52,000 in 1935-36.

Since the imposition of the excise duty it is noteworthy, that the Khandsari production has gone down considerably.

In view of the astounding growth of the industry within such a short time, the following table of forecast of annual consumption and imports of sugar into India up to 1936-37, is of interest:—

	1932-33. (Actual.) Tons.	1933-34. (Est.) Tons.	1934-35. (Est.) Tons.	1935-36. (Est.) Tons.	1936-37. (Est.) Tons.
Indian sugar production of the preceding cane-crushing season	478,120	645,283	715,000	770,000	835,000
Consumption of sugar in India during the official year	895,280	880,757	930,000	930,000	930,000
Difference between production and consumption, representing margin for imported sugar entering into consumption during the official year.	417,160	238,474	215,000	160,000	—95,000

It is also of interest to note that the production of *gur* for direct consumption is increasing since 1931-32.

	<i>gur</i> . (Tons.)
1931-32	27,72,000
1932-33	32,45,000
1933-34	35,97,000
1934-35	36,92,000

It may be noted also as a matter of interest that India is the largest producer of sugar among all the countries in the world, the total yield of raw sugar (*gur*) being 6,102,000 tons. (Vide the Indian Sugar Industry—1936 Annual by Mr. M. P. Gandhi, Secretary, Indian Sugar Mill Association, Calcutta).

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to 200,000 workers.

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated and gradually the industry became identified

with three great centres: namely, (1) Eastern and Northern Bengal more especially the District of Rangpur; (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry. The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of

investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are:—(i) the Coimbatore and Dindigul tract of Madras, where the *Uti-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (ii) the Godavari Delta of Madras; (iii) the Rangpur tract of Bengal; (iv) the Districts of Bihar and Orissa; (v) Guzerat in Bombay and (vi) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the *Erythroxylon* Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

The Review of the Customs Administration in India for 1930-31 states that during the year a total of 17,345 grains of cocaine were seized by the Customs authorities, of which 1,792 ounces were valued at approximately Rs. 1,80,000.

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punish-

ment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries. So much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade.—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to: (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted; (3) the total extinction

of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon

the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent. yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (*e. g.*, the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

Present Policy.—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is,

and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express.

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Perozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under license. Importation into British from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The sown area in British India which produced the crop of 1931-32 was 37,012 acres, *i.e.*, 26.3 per cent of the area in 1922-23, and 20 per cent of that in 1912-13. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1933.

The population of British India according to the 1931 Census is 271,526,992, and the consumption per head in British India, excluding Aden, inclusive of the opium used for veterinary purposes but excluding that consumed for medicinal purposes was 11.04 grs. per head of the population. The population of Aden in 1931 was 50,809 and the opium consumption per head was 12.3 grs. Since 1931 the consumption rate has further diminished.

Close supervision is maintained over the licensed vendors in all parts of British India; the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be

sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE.

Glass was manufactured in India centuries, before Christ. Pliny mentions "Indian glass" as being of superior quality.

As a result of recent archaeological excavations, a number of small crude glass vessels, indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa, the Chronicles of the Sinhalese Kings (306 B.C.) when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century, glass was an established industry in India, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were rough.

Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this direction. Since then, a number of concerns have started. Some of them have failed. They devote themselves mainly to the manufacture of bangles and lampware side by side with bottlemaking on a small scale.

In its present stage, the industry takes two well-defined forms—(1) Indigenous Cottage Industry and (2) the modern Factory Industry.

The Indigenous Cottage Industry, which is represented in all parts of the country, has its chief centres in the Firozabad District of the United Provinces and Belgaum District in the South. It is mainly concerned with the manufacture of cheap bangles made from glass cakes or blocks, made in larger factories. The industry at present is in a flourishing state and supplies nearly one-third of the Indian demand for bangles. However, it is now faced with Japanese competition, and already the Japanese "silky" bangles are ousting the old type Indian products.

The modern Factory Industry in glass is still in its infancy in India. The existing factories mostly stop at producing glass cake for bangles as in Firozabad or a simple kind of lampware

and bottles. There is one factory in the United Provinces, which since 1929 has been manufacturing sheet glass. The Indian glass industry has not advanced to the stage of manufacturing artistic glassware.

Records of the earlier ventures have shown that failure in some cases was due in part at least to preventable causes. Foremost among these, were lack of enlightened management, lack of expert attention and, in many cases, small attention to choice of site. Specialisation, too, has been lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously, like lampware, bottles and bangles. Paucity of sufficient fluid capital for initial expenses has also been another contributory factor in bringing such ventures to grief.

In October 1931, the inquiry into the glass industry was referred by the Government of India to the Indian Tariff Board. The Board submitted its report in March 1932. It recommended the grant of protection for ten years and outlined proposals for protective duties on the following basis:—(1) Sheet and Plate Glass including figured and ribbed glass—Rs. 4 per 100 sq. feet or 25 per cent., *ad valorem*, whichever is higher; bangles, beads and false pearls—50 per cent., *ad valorem*; glass and glassware of certain specified types, like tumblers, tiles, shades, chandeliers—50 per cent., *ad valorem*.

These findings however were not acceptable to the Government of India, who considered that the absence of indigenous supplies of raw materials constituted a disadvantage to the industry, which could not possibly be balanced by any advantages which it might possess in other respects. This, however, does not imply rejection of the recommendation, because Government have decided to postpone their final decision in the matter. In the course of the next two years, Government will come to a final decision as to whether the industry is deserving of protection. For the present, Government have decided to afford the glass manufacturing industry a certain measure of relief by way of a rebate of duty on imported soda-ash.

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. The trade and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by

the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides.—The fifteenth report of the Imperial Economic Committee states that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots; partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing

the thread. Raw sheepskins are used for similar articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom, but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes, the entry into the trade of new and at first inexperienced firms, the increased cost of arranging for supervision at up-country points. It has, however, been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent. on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries ex-

plained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have, in fact, the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire, and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate." The export duty on raw skins was abolished by the budget for 1935-36.

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolams. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INDIAN INVENTIONS AND DESIGNS.

While India will have to depend for some time to come on foreign manufacturers for her supply of textile machinery, power plants and other industrial requirements, Indian engineers and chemical experts will have ample opportunity to exercise their inventive skill in various other directions. These may include agricultural implements, domestic appliances, drying and moistening apparatus, labour-saving devices, small manufactures in hardware, pumps, water lifts, furniture and metal wares, construction of roads and permanent ways, railway signalling and controlling, railway vehicles, buildings and structures, valves and cocks, latrines, closets and sanitary appliances. There will also be new chemical processes an apparatus including the manufacture of vegetable products, foodstuffs, treatment of oil seeds, the use of by-products and waste materials, use of starchy raw materials for the sizing of yarn and cloth, tallow substitutes, manufacture of caustic soda, soda ash, bleaching powder and chlorine and other chemical products for use in the various industries which the country will be engaged in developing in the near future.

A handbook to the **Patent Office** in India which is published by the Government Press, Delhi, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The existing **Indian Patent Law** is contained in the Indian Patents and Designs Act, 1911, as amended in 1930 and the Rules of 1933. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act, (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matter of major interest. One main difference exists however, as owing to the absence of provision of law for the registration of Trade Marks, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action and, owing to some informalities, the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter Hyderabad (Deccan), Mysore, Gwalior, Baroda, Travancore, Marwar, Cochin, Kashmir and Jamu have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession, but under the reciprocal arrangement an applicant for an Indian patent has 12 months priority in the United Kingdom, Australia, Canada, New Zealand, the Irish Free State, the Union of South Africa and Ceylon and *vice versa*. The object of the Act of 1911 was to provide a simpler more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail.

New Legislation.—Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following :—

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years.

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government.

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms.

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

What constitutes patentable invention :—

The term invention means any manner of new manufacture and includes an improvement, while manufacture includes any art, process or manner of producing, preparing or making an article and also the article prepared or produced by manufacture.

Thus a bare discovery or a new principle cannot be patented; the invention or improvement must include some form or manner of manufacture, and may consist of a machine or apparatus or a composition or compound or a process of manufacture. It must be in the form of a method or means or production of a vendible article.

A game of skill or chance without the means of playing it or a method of calculation or writing music, medical prescriptions, vegetable or natural substances suitable for food, an ornamental design for a piece of furniture or for a *sari* or other textile fabric do not constitute patentable inventions.

Patents will however, be granted for new and useful inventions or improvements relating to any art or process or a machine or article of manufacture or a composition of matter. Thus a machine or appliance will constitute a mechanical patent; a new method of manufacturing an article which reduces a number of steps to a single operation will form a process patent while metal alloys, chemicals, paints, soaps, varnishes and dyes will be included in compound or composition patents.

A patent may be obtained for a new method of applying a known article or a new contrivance applied to a new object or purpose and which yields a new result. A new contrivance or device applied to old objects for producing a new and useful result is also patentable. An old substance produced by a new process is a new manufacture; so also a novel and ingenious combination of old parts yielding useful results.

The mixture of two or more substances in certain definite proportions forming a compound substance of advantage and utility for its useful properties will be subject-matter for a patent as also a chemical process with or without the mechanical devices necessary for it.

In the case of chemical inventions the chemical and physical properties of bodies and their constitutions cannot form subject-matter for a patent, but they may be utilised for manufacturing foodstuffs, dyes, beverages and other useful and vendible compounds or compositions which can be covered by a patent. It should also be noted that in chemical processes the article or substance if produced may be old, but if the mode of producing the known substance is new the process will be patentable.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA (In lakhs of Rupees.)

Note.—The quinqueennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(a) Excludes gold imported and exported on behalf of the Bank of England.

(b) Figures are for calendar year ending 31st December.

(c) Net exports.

According to the report by Mr. N. Mukarji, Actuary to the Government of India, contained in the Indian Insurance Year Book, 1932, the number of companies subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 282 of which 136 companies are constituted in India and 146 companies are constituted outside India. Of the 136 Indian companies, 60 are established in the Bombay Presidency, 25 in Bengal, 21 in the Madras Presidency, 14 in the Punjab, 8 in Delhi, 2 each in the Central Provinces, Ajmer and Burma and 1 each in Burma and the U. P. Of the 146 non-Indian companies 71 are constituted in the United Kingdom, 31 in the British Dominions and Colonies, 18 in the Continent of Europe, 12 in the United States of America, 9 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 103 in number and of the remaining 33 Indian companies, 20 carry on life business along with other insurance business and 13 carry on insurance business other than life.

Besides the Indian life offices, there are some pension funds, mostly connected with Government offices, which are exempt from the operation of the Act and the Indian Post Office Insurance Fund is also exempt. As regards non-Indian companies, most of them carry on insurance business other than life. Out of the total number of 146 non-Indian companies, 122 carry on insurance business other than life, 10 carry on life business only and 14 carry on life business along with other insurance business. Of the latter 24 companies, 16 are constituted in the United Kingdom, 6 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

The total new life assurance business effected in India during 1931 amounted to 125,000 policies assuring a sum of nearly 28½ crores and yielding a premium income of 1½ crore, of which the new business done by Indian companies amounted to 97,000 policies assuring a sum of 17 crores and having a premium income of ¾ crore. The share of the British companies in respect of new sums assured is 3½ crores, of the Dominion and Colonial companies about 6 crores and of the single German company ½ crore.

The average sum assured under the new policies issued by Indian companies is Rs. 1,764 and under those issued by non-Indian companies Rs. 3,400.

The total life assurance business effected in India and remaining in force at the end of 1931 amounted to 714,000 policies assuring a total

sum of 168 crores including reversionary bonus additions and having a premium income of very nearly 8½ crores. Of this the share of Indian companies is represented by 502,000 policies assuring a sum of 94 crores and having a premium income of 4½ crores.

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the **dividing plan** under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy-holders in each class are charged the same rate of premium of subscription irrespective of their age on admission ranging even in some cases from 18 to 60 years. "Business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policy-holders and agents and later on by the company. It has been declared to be the curse of insurance enterprise in India." Before the Act of 1912 was passed there were numerous companies which transacted life assurance business on the dividing plan and most of them came to grief. Of such companies which were in existence at the time of the passing of the Act the majority have disappeared and some have stopped issuing policies on the dividing plan. A few new companies have taken up this dividing insurance business and it will not be long before they realise their mistake.

Some Indian life offices have extended their operations outside India, mostly in British East Africa and in the Near East. The total new sums assured by these offices outside India in 1931 amounted to 66 lakhs yielding a premium income of 4 lakhs and the total sum assured including reversionary bonus additions in force at the end of 1931 amounted to 4 crores, having a premium income of 2½ lakhs.

The total new annuity business effected during 1931 was for the amount of about ½ lakh per annum, which was equally shared by Indian and non-Indian companies. The total annuity, business remaining in force at the end of the year was for the amount of 3½ lakhs per annum, of which the amount payable by Indian companies was a little over 1½ lakhs per annum.

The life assurance business of Indian companies which steadily increased during 11 years up to 1929 received a setback in 1930 owing to the general financial depression. The following table shows the **new business effected** since 1921 in each year and the total business remaining in force at the end of the year.

Year.	New business written during the year.	Total business remaining in force at the end of the year.
1921	5.47 lakhs.	34 crores.
1922	5.64 "	37 "
1923	5.85 "	39 "
1924	6.89 "	42 "
1925	8.15 "	47 "
1926	10.35 "	53 "
1927	12.77 "	60 "
1928	15.41 "	71 "
1929	17.29 "	82 "
1930	16.50 "	89 "
1931	17.76 "	98 "

A large portion of the new business transacted by the younger and less firmly established companies lapsed within a short time and the growth of total business in their case is not commensurate with the volume of new business transacted in each year. The total business which lapsed during 1931 was 7½ crores and was over 40 per cent. of the total new business.

The **net income** of the Indian companies under their life assurance business from premiums and interest amounted to 5½ crores in 1931 and was in excess of ¼ crore over the corresponding income of the previous year. Claims amounted to 1½ crore and exceeded the previous year's figure by 12 lakhs. Claims by death showed an increase 5 lakhs and

claims by survivorship an increase of 7 lakhs, respectively.

The life assurance funds increased by nearly 2 crores during 1931 and amounted to 22½ crores at the end of that year. The average rate of interest earned on the life funds during the year was a little less than 5½ per cent.

The **Post Office Insurance Fund** was instituted by the Government of India in 1883 for the benefit of the postal employees but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund during the four years 1929 to 1932:—

Year ending 31st March.	New business effected during the year.		Total business remaining in force at the end of the year.		Total income.	Life Assurance fund at the end of the year.
	Number of policies.	Total sums assured.	Number of policies.	Total sums assured and bonuses.		
1929 ..	7,582	1,43,41,000	64,474	13,02,47,000	63,17,000	3,64,44,000
1930 ..	8,894	1,49,56,000	71,479	14,17,81,000	69,36,000	4,02,80,000
1931 ..	9,710	1,50,38,000	79,058	15,32,85,000	76,05,000	4,46,46,000
1932 ..	6,484	98,15,000	83,165	15,88,89,000	81,39,000	4,91,47,000

Fire, Marine and Miscellaneous Insurance Business.—The net Indian premium income of all companies under insurance business other than life assurance during 1931 was 2½ crores of which the Indian companies' share was ¾ crore and that of the non-Indian companies 1¾ crore. The total amount is composed of—

1,28 lakhs from fire.

43 lakhs from marine, and

77 lakhs from miscellaneous insurance business.

The Indian companies received—

28 lakhs from fire,

7 lakhs from marine, and

24 lakhs from miscellaneous insurance business.

The **total assets of Indian companies** amount to 29 crores of which stock exchange securities form the bulk. These securities are shown in the account at a net value of 20½ crores. Mortgage loans on policies and on stocks and shares are shown at 4 crores; land and house property are valued at 1½ crore; deposits, cash and stamps, are shown at ¾ crore, accrued interest at ¼ crore; agents' balances and other outstanding items at 1½ crore; and loans on personal security and other miscellaneous assets at ¾ crore. Investments of Indian companies outside India consist mainly of stock exchange securities and amount to ¾ crore.

Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States—and by whatever name it may be called India must in its political structure be a Federal State—nothing is more impressive than the ebb and flow in what may be called the adjustment of Federal and State rights. There is a constant mutation in the powers of the central government and the federal components, though in India we use the terms "Government of India" and "Provincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion. Indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets.

A Review.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income tax than they were entitled to.

Regarding possible new sources of revenue, Federal or Provincial, the Federal Finance Committee reported as follows:—

Federal.

Excise on Tobacco.—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licences and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small

establishments and even as a domestic industry. Vendors licenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is now being encouraged by the Government of India. The difficulties in the way of a federal excise may be overcome in course of time, but it would be unsafe for us to rely on this in the near future.

Excise on Matches.—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable net yield of the tax for all-India at a reasonable rate, with due allowance for reduced consumption, would be about 3 crores, of which at least 2.50 crores would be raised in British India.

Other Excises.—It is possible that other excise duties may occupy an important place in the fiscal Policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early years of federation.

Monopolies.—We have examined the suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to license. Public utility monopolies stand on rather a different footing; but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps.—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

The yield of certain stamp duties which might be placed in this category was, in 1930-31, slightly more than one crore. This was a sub-normal year, and the normal yield should be somewhat higher. In 1930-31 about 40 per cent. of the yield was received by Bombay (one-eighth of this being attributable to Sind), 27 per cent. by Bengal and 12 per cent. by Madras. The loss of revenue resulting from the federalisation of these duties would therefore be unevenly distributed, and their federalisation would not ease the problem of distributing income-tax.

Further, there are obvious difficulties in the way of separating stamp duties into two classes, commercial and non-commercial. It could only be done by means of a schedule, and a large element of purely arbitrary selection would

be involved. The simple constitutional solution would be to class all stamp duties as provincial sources of revenue.

We have given some attention to the question considered by the Federal Structure Committee whether the Provincial Governments should be given power also to fix the rates of duty on all stamps, or whether legislation on this subject should be reserved, wholly or partially, to the Federal Government. We suggest that the Federal Government should retain the power to legislate on behalf of the Provinces in regard to those stamp duties which are the subject of legislation by the Central Government at the date of federation. The duties which are now the subject of central legislation are those on acknowledgments, bills of exchange, share certificates, cheques (not now dutiable), delivery orders in respect of goods, letters of allotment of shares, letters of credit, insurance policies, promissory notes, proxies, receipts and shipping orders. We understand that proposals have been under consideration for adding other duties to this list, and would suggest that, if any such additions are contemplated, that should be made before the establishment of the Federation.

We ought to add, in this connection, that difficulties already arise in estimating the share of each Province in the proceeds from the sale of postage stamps for use on taxed documents, and these difficulties may be expected to lead to considerable friction with the Provincial Governments unless a more satisfactory system can be devised.

Finally, in proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudice the possibility that, as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax.—From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco.—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex hypothesi* the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised; and as that development takes place an excise levied at the factory by one Unit of the Federation

would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired.

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties.—Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties, and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units; but clearly the facts would not justify reliance on them as a source of revenue in the near future.

Terminal Taxes.—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. As the arguments for and against this proposal have been so fully set forth in previous reports, it scarcely seems necessary to re-state them here. The feature of such taxation which has impressed us most seriously is its operation as, in effect, a surcharge on railway freights. Where municipal octrois are in force, there appears to be a tendency to substitute for the general levy of dues on all goods entering the municipal boundaries the simpler alternative of a terminal tax collected at the railway station, and there is already a danger that this habit may result in diversion of traffic to the roads. We therefore recommend that, if terminal taxes are to be regarded as a permanent part of the financial structure, they should be imposed by the Federal Legislature for the benefit of the Units. Such terminal taxes as are already in existence (mainly as municipal taxes) will fall into much the same category as other taxes classed as federal which, at the time of federation, are being levied by certain Units; but though it may be necessary for this reason to authorise the municipalities and Provinces concerned to continue to raise these taxes, they should be allowed to do so only within limits laid down by the Federal Legislature. Assam and Bihar and Orissa are the two Provinces which, having few or no municipal taxes of the kind at present, are most desirous of deriving provincial revenue from this source. While we do not rule out the possibility of terminal taxes in these two Provinces and elsewhere as a temporary expedient, in view of the practice which has grown up in various parts of India, we are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Incomes.—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the

possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government.

We are aware of no reliable data for estimating the yield of such taxation.

Conclusion.—In this survey of possible sources of additional revenue, we have deliberately left out of account the question whether or to what extent it would be possible to increase the yield of existing taxes. We have confined ourselves to an examination of new sources, and in this field the results of our survey are not encouraging. We have found that such provincial taxes as appear to be within the sphere of practical politics in the immediate future cannot be relied on to yield any substantial early additions to provincial revenues. In using the phrase "practical politics," we are not, of course, expressing an opinion as to whether this or that tax ought or ought not to be imposed, or even as to whether it is or is not likely to be imposed by the legislatures of autonomous Provinces when these are constituted. We are only noting the fact that the opposition to certain forms of taxation, or the difficulty of their imposition, is still so great that they are not likely to be adopted soon enough to influence the financial situation at the time when the Federation comes into being. In the federal sphere, the excise on matches is the only tax which we feel justified in taking into account as an immediate reinforcement of federal revenues.

Niemeyer Report.

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situation and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions and partly in the form of cancellation of the net debt incurred previous to April 1, 1936, and partly in the form of distribution to the jute growing provinces of a further 12½ per cent. of the jute tax.

Annual cash subventions are as follows: To the U. P. Rs. 25 lakhs for 5 years only; to Assam Rs. 30 lakhs, to Orissa Rs. 40 lakhs, to the N. W. F. Province Rs. 100 lakhs (subject to reconsideration after 5 years), and to Sind Rs. 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:—Bengal Rs. 75, Bihar Rs. 25, U. P. Rs. 15, Assam Rs. 45, N. W. F. Province Rs. 110, Orissa Rs. 50, Sind Rs. 105, and U. P. Rs. 25, extra recurrent cost to the centre Rs. 192 lakhs.

Orissa is to get a further non-recurrent grant of Rs. 19 lakhs and Sind of Rs. 5 lakhs by six equal steps beginning from the sixth year from the introduction of provincial autonomy, but subject to the proviso to section 138 (2) of the Act. The centre is to distribute the income-tax to the provinces so that finally 50 per cent. of the distributable total has been relinquished in the intermediate five years, so long as the portion of the distributable sum remaining with the centre, together with any contribution from the Railways, aggregates 13 crores.

As regards the provincial share of the proceeds from income tax, Sir Otto Niemeyer recommended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U. P. 15, Punjab 8, Bihar 10, C. P. 5, Assam 2, N. W. F. Province 1, Orissa 2 and Sind 2.

Sir Otto Niemeyer suggested that the Centre would not be in a position to distribute any part of income tax proceeds for the first five years from beginning of provincial autonomy but that it might be in a position to distribute some of the proceeds, though not necessarily the percentage allocated, within the first ten years of provincial autonomy. But this, he said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues. His remarks on this point are:—

The position of the railways is frankly disquieting. It is not enough to contemplate that in five years' time the railways may merely cease to be in deficit. Such a result would also tend to prejudice or delay the relief which the provinces are entitled to expect.

"I believe that both the early establishment of effective co-ordination between the various modes of transport and the thorough going overhaul of railway expenditure in itself are vital elements in the whole provincial problem.

Railway Finance.—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (*q.v.*) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways; it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Aworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance; a definite annual contribution from the railway revenues to the general revenues; and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits: further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgetting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

In the past few years, owing to the economic depression, the railways have been unable to make the contribution to general revenues.

I. RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to the avoidance of debt. Throughout the war the finances were carefully handled and with

certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a

large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (*q. v.* Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation.—Owing to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee, on the model of the Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Inchcape Committee. It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crores.

Financial equilibrium was established and surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government since 1921-22.

Year.	In lakhs of Rupees.

(Budget)			

(a) Excludes share of additional revenue from import and excise duties on motor spirit payable to Road Development Fund.

(b) A surplus of 2.96 was transferred to Revenue Reserve Fund.

(c) A deficit of 2.22 was met by transfer from Revenue Reserve Fund.

(d) A deficit of 1.06 was met to the extent of 74 by transfer from Revenue Reserve Fund.

II. THE PRESENT FINANCIAL POSITION.

India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs. 86 lakhs; the revised estimates worked up to a deficit of Rs. 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt. The main items of deterioration as compared with the Budget can be summarised as follows:—

	Lakhs.
Important revenue heads, viz.,	
Customs, Taxes on Income,	
Salt and Opium (net)	12,10
Posts and Telegraphs (including	
the Indo-European Telegraph	
Department)	89

	Lakhs.
Finance headings, viz., Debt	
services, Currency and Mint.	1,38
Other heads	5
Total Rs.	14,42

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs. 13.16 crores, including a drop of Rs. 8 crores in Customs and 4½ crores in income tax. The total deterioration under Finance headings was Rs. 376 lakhs and on commercial departments Rs. 118 lakhs. This meant a total deterioration of Rs. 18.10 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs. 86 lakhs the net deficit would be Rs. 17.24 crores. To meet this deficit the Finance Member announced a cut of Rs. 175 lakhs in army expenditure and retrenchment to the extent of Rs. 98 lakhs in civil expenditure, making a total saving of Rs. 273 lakhs. The estimated deficit was reduced thereby to Rs. 14.51 crores, which he proposed to cover by fresh taxation.

WAYS AND MEANS.

The following is a summary of the estimates of ways and means in India during 1934-35 and 1935-37:—

(In crores of rupees.)

	Budget, 1935-36.	Revised, 1935-36.	Budget, 1936-37.
RECEIPTS.			
Excess of Revenue of the Central Government over Expenditure charged to Revenue	32.29	32.47	31.39
Unfunded Debt incurred—

Opening Balance	13.10	16.15	12.45
Closing Balance	12.61	12.45	12.10

Supplementary Budget.—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly with a Supplementary Finance Bill. The Finance Member said that the returns for the first five months indicated that they would fall short of their budget estimates for customs by at least Rs. 10 crores, the heaviest reductions being under cotton piece-goods, sugar, silver, spirits and liquor, excise on motor spirit, iron and steel and in the jute export duty, while they expected a deficit of Rs. 1½ crores on income-tax. Income from Railways and Posts and Telegraphs showed a similar decline. The total deterioration in income amounted to Rs. 11.33 crores in tax revenue, Rs. 5.48 crores on commercial departments, Rs. 2.29 crores in general finance headings, Rs. 23 lakhs under extraordinary receipts and Rs. 23 lakhs under other heads. As the budget provided for a small surplus of Rs. 1 lakh on the basis of the present estimates there would be a net deficit of Rs. 19.55 crores. Putting the deficit for the current year and next year together they had a gap to fill of Rs. 39.05 crores. He proposed to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency cut in salaries; and thirdly, to impose fresh taxation.

The 1932-33 Budget.—Presenting the 1932-33 budget on March 7th, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931. On the basis of the supplementary budget in September it was hoped to reduce the deficit for the current year to Rs. 10.17 crores and for the following year to realise a surplus of Rs. 523 lakhs but experience had made it necessary to revise these estimates. A deterioration in the figures by about Rs. 3 crores was to be allowed for each year and it was anticipated that the current year would close with a deficit of Rs. 13.6 crores and that the surplus for 1932-33 would be Rs. 2.15 crores. The Finance Member reminded the House that for the current year and the next year combined no less than Rs. 18.71 crores was being provided from revenue for reduction or avoidance of debt.

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. The results for 1931-32 had turned out to be Rs. 2 crores better than anticipated in the budget speech and the account for the year showed a deficit after providing nearly Rs. 7 crores for the reduction of debt of Rs. 11½ crores. For the year 1932-33 the latest revised estimates indicated that the surplus would be Rs. 217 lakhs or Rs. 2 lakhs more than was estimated. He continued to estimate revenue for 1933-34—particularly customs revenue—is, in view of the completely uncertain and abnormal conditions, a task of quite unprecedented difficulty. Indeed I may say that accurate estimation is impossible. In these circumstances and for the reasons which I have explained, we have thought that the most reasonable course is to assume that the

general position next year will be the same as for the current year, neither better nor worse, and in particular that India will be able to maintain the same purchasing power for commodities imported from abroad.

The 1934-35 Budget.—Summing up the results for 1933-34 when introducing the 1934-35 budget the Finance Member said that with the arrangement to provide Rs. 3 crores for debt reduction instead of the Rs. 6.89 crores due under the debt reduction convention the year would close with a surplus of Rs. 129 lakhs. This sum Government proposed to set aside as a special fund to cover relief measures in respect of earthquake damage. For 1934-35 Government were expecting a drop of Rs. 280 lakhs in revenue which was more than accounted for by the anticipated falling off in sugar import duties, while expenditure would be Rs. 2 lakhs higher. In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs. 153 lakhs.

Changes in Duties.—The Finance Member announced the imposition of an excise duty on sugar:

Silver.—A reduction in the silver import by 2½ annas to 5 annas per ounce.

Export Duty on Hides.—The export duty on raw hides was abolished by the 1934-35 budget.

Excise on Matches.—Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs. 2-4-0 per gross of boxes on matches made in British India.

Posts and Telegraphs.—Favourable changes in postal and telegraph charges were announced:—

The 1935-36 Budget.—This Budget was expected to show a surplus of Rs. 150 lakhs available for tax reduction.

Silver.—The silver duty was reduced to 2 annas an ounce.

Export Duty on Skins.—The export duty on raw skins was abolished.

Reduction of Taxes on Income.—"We still have said" the Finance Member "Rs. 1,42 lakhs left to dispose of and I propose to do this in accordance with the pledge of my predecessor in which he said 'Relief must come first in restoring the emergency cuts in pay and secondly in taking off the surcharge on the income-tax now to be imposed.'"

Although the tax on smaller incomes was not strictly a surcharge, it does, I think, come within the spirit of the pledge and I propose to deal with it and the surcharges on income-tax and super-tax together. The removal of the surcharges altogether would cost Rs. 3.34 lakhs a year while the removal of the tax on incomes between Rs. 1,000 and Rs. 2,000 would cost a further Rs. 75 lakhs. Clearly with a surplus of Rs. 1,42 lakhs only we cannot remove the whole of the two surcharges and the quasi-surcharge but what we can do is to reduce them by one-third and this is what I in fact propose. The cost will be Rs. 1,86 lakhs leaving us with a purely nominal surplus of Rs. 6 lakhs".

Treatment of 1934-35 Surplus.—The surplus for 1934-35 turn out to be much larger than originally budgeted, totalling Rs. 389 lakhs.

"After of this sum the Finance Member said these special grants have been made there should remain a balance of Rs. 2.04 lakhs. A large part of this sum I propose to put aside for two schemes which it was provisionally decided to finance from capital. These are the civil aviation programme which is expected to cost Rs. 93 lakhs, and the transfer of the Pusa Institute to Delhi which will cost about Rs. 36 lakhs. The remainder of the surplus amounting to Rs. 75 lakhs will now go as an additional allotment for the reduction of debt and this concludes the disposal of the sums which we expect to have in hand on the 31st March next."

Revenue in 1935-36.—Concerning the revenue for 1935-36 the Finance Member said :

"The total revenue, excluding Railways, may be at Rs. 90.19 lakhs or Rs. 81 lakhs less than the revised estimate for the current year."

Customs, etc.—Here I estimate for Rs. 51.92 lakhs altogether or an increase of Rs. 75 lakhs over the revised figures for the current year. The main variations are a decline of Rs. 2 crores on the import duty on sugar combined with increases of Rs. 35 lakhs on the sugar excise of Rs. 65 lakhs on the match excise and of Rs. 42 lakhs on kerosene and Petrol."

Interest.—This shows a very large reduction amounting of Rs. 1.29 lakhs which is of course due to the transfer of the currency function and, therefore the reserves, of the Government of India to the Reserve Bank. It is true that as against this we shall get the surplus profits of the Bank but in the first year instead of getting a full year's interest on the assets in our various reserves and balances we shall only get a part year's dividend from the profits of the Bank. We have included Rs. 50 lakhs on this account under the head "Currency" but the receipts here still show a drop of Rs. 11 lakhs owing to the lower rates prevailing for short term money."

1935-36 Expenditure.—"Expenditure as a whole, again excluding Railways, stands at Rs. 88.69 lakhs showing an increase of Rs. 96 lakhs which is of course almost entirely due to the restoration of the pay cut.

"The cost of restoration will be Rs. 55 lakhs for the Civil Departments, excluding the Railways, but including the Posts and Telegraphs Department, and Rs. 53 lakhs for the Army, a total of Rs. 1.08 lakhs, but there is, as I have said, a set off against this in the form of extra income-tax to the extent of Rs. 16 lakhs.

"Apart from the pay cut, there are only minor increases, most of them on new services, e.g., the marketing scheme, grants to the handloom and sericultural industries, the new Dairy Institute and the Institute of Industrial Research. There is also a small increase on Defence and a deficit on Posts and Telegraphs, which is however, more than explained by the abolition of the pay cut.

Defence.—"The Defence Budget shows an increase, leaving out of account the pay cut, of Rs. 7 lakhs over the original estimate for this

year but the partial restoration by His Majesty's Government of the pay cuts of British soldiers which has necessarily to be applied to British soldiers on the Indian establishment, accounts for Rs. 5 lakhs of this. The purely nominal increase of Rs. 2 lakhs which remains conceals however a considerably increased provision for necessary services and re-equipment which had to be postponed during the financial emergency."

Reduction of Debt.—There is only one other item which I wish specifically to mention at this stage and that is the provision for the reduction and avoidance of debt. As Hon'ble Members are aware, our revised estimates for 1933-34 and those for the current financial year included only Rs. 3 crores for this purpose. It is of course a matter of common knowledge that 60 per cent. of the Government of India debt is attributable to the Railways and it seems to me that it would be imposing too heavy a burden on the general Budget to revert to the Sinking Fund arrangements in force prior to 1934-35 before the Railways have resumed the practice of making a contribution to the General Revenues I therefore accept as reasonable for the time being the provision of Rs. 3 crores now prevailing but I should like to make it clear that, in my view, an increased provision for debt reduction ought to be a first charge on any contribution from the Railways in the future."

Decision.—The Finance Bill was subjected to a protracted debate in the Legislative Assembly. Several amendments designed to reduce the scale of taxation proposed by the Finance Member were made, and the House accepted three amendments emanating from the Congress Party. These three amendments, which together had the effect of making a cut of about four and a half crores of rupees in the Budget, sought to reduce the salt duty from Re. 1-4 to 12 annas (which would have meant a loss of three and a half crores of rupees); to exempt incomes of less than Rs. 2,000 a year from payment of income tax (which would have cost Rs. 50 lakhs); and to lower postal rates by providing for a return to the half-anna postcard and the one anna letter (which would have cost Rs. 76 lakhs).

On April 5, His Excellency the Viceroy returned the Finance Bill to the Assembly with the recommendation that it should be passed in the original form. This the Assembly declined to do by rejecting the Finance Member's motion for the restoration of the salt duty to Re. 1-4, by 64 votes to 41.

The Finance Bill was thereupon certified by the President and sent to the Council of State in its original form. Several amendments to it were to have been moved by members of that House, but when it was learned that the Viceroy had no power to accept amendments made by the Council of State in the certified Bill, the amendments were not moved although members of the Progressive Party voted against certain proposals of the Finance Bill. The Bill in its original form was then passed, and with the addition of the Viceroy's Signature, it became law.

The 1936-37 Budget.—In opening the 1936-37 budget the Finance Member announced that the final accounts for 1934-35 had exceeded the anticipated surplus of Rs. 327 lakhs and had actually provided a surplus of Rs. 4.95 lakhs. The revised forecast for 1935-36 also anticipated a surplus of Rs. 242 lakhs. For 1936-37 the revenue expected was Rs. 87.35 lakhs.

Customs, etc.—Here the receipts are estimated at Rs. 54.82 lakhs. This figure presumes a deterioration of Rs. 1.60 lakhs under the import duty on sugar and an all round improvement of Rs. 1.71 lakhs under other heads.

Expenditure.—The total figure for expenditure, exclusive of Railways, is Rs. 85.30 lakhs showing an increase of Rs. 1.20 lakhs over the current year's revised estimate. There is an increase under Civil Works a considerable part of which is due to larger payments to the Road Development Fund—an automatic result of the expanding yield of the duty on motor spirit. But there are more important changes to which I wish to draw your attention, *viz.*, a decrease under interest and increases under Miscellaneous Adjustment, Civil Administration and Defence. In addition I shall have to mention Extraordinary Expenditure though it does not show a very large variation from the revised figure of 1935-36.

Interest.—Again taking the two heads of Ordinary Debt and Other Obligations together we get a figure of Rs. 9.20 lakhs as against Rs. 10.63 lakhs in the revised estimate for 1935-36, or a reduction of nearly Rs. 1½ crores. But the position is really better than this for under "Interest on Other Obligations" there is an increase of Rs. 62 lakhs due mainly to an alteration in the arrangements in respect of the Indian Military Service and the Indian Civil Service Family Pension Funds.

Subventions to Sind and Orissa, 1936-37.—The increase under Miscellaneous Adjustments is due to the provision of Rs. 1.58 lakhs for subventions to Sind and Orissa—Rs. 1.08 lakhs for the former and Rs. 50 lakhs for the latter. It has been decided that these two new provinces shall begin their careers on April 1st, 1936 in advance of the full institution of Provincial Autonomy. It has all along been recognised that they would require subventions at any rate for some years after they began their separate existence. The definitive subventions fall to be determined by His Majesty in Council after considering the recommendations of Sir Otto Niemeyer's enquiry, but in the meantime the two Provinces must be put into a position to carry on under the provisional regime, and the present subventions are intended for this purpose.

Defence.—The Defence Budget stands at the figure of Rs. 45.45 lakhs. Of this, however, Rs. 60 lakhs is a special provision for the reconstruction of Quetta and the replacement of military stores consumed in connection with the earthquake. The ordinary Budget is, therefore, Rs. 44.85 lakhs of which Rs. 18 lakhs is for new measures. The total figure for the present year is Rs. 44.98 lakhs but this includes Rs. 34 lakhs for Indian Military Service Family Pensions which, as I explained in dealing with the interest heads, is omitted from the Defence budget of next year. The comparable figures for the two

years are therefore Rs. 44.64 lakhs and Rs. 44.85 lakhs. The real increase is thus Rs. 21 lakhs and this is more than accounted for by two items. Rs. 5 lakhs represents the restoration of the remaining half of the cut in pay of British soldiers which was not budgeted for in 1935-36 and Rs. 20 lakhs on increased provision for ordnance stores.

In regard to the latter I must reiterate the warnings which have been given in this connection in recent years that the present budget figures do not represent a new permanent low level of Defence expenditure. The surplus stocks of ordnance stores, the existence of which in the past has tended to keep down the budget are approaching exhaustion and the time has now come at which expenditure under this head must inevitably rise.

Quetta.—This is probably the most convenient place to review the Quetta problem as a whole. In 1935-36 we expect to spend from Civil Funds proper Rs. 41½ lakhs, and Rs. 36 lakhs from Army Funds. Practically the whole of this has been on relief, temporary housing, and salvage though there has been a beginning of clearance. Next year we shall have to complete clearance and begin reconstruction. Under Civil Grants Rs. 40 lakhs are provided of which Rs. 12 lakhs are for clearance and special staff and Rs. 28 lakhs for reconstruction. Under Defence there is Rs. 10 lakhs for replacement of stores and Rs. 50 lakhs for reconstruction. Thus the cost to Government of the disaster up to the stage of beginning reconstruction may be put at Rs. 41½ plus 36 plus 12 plus 10 lakhs or almost exactly a crore in all. The reconstruction both Civil and Military is at present expected to cost something over 7 crores. These estimates are provisional but I have every hope that they will not be exceeded. The work will take 7 or 8 years and we do not anticipate that it will be possible to spend appreciably more than a crore in any one year. In 1936-37 we begin with Rs. 78 lakhs of which Rs. 50 lakhs is for Military and Rs. 28 lakhs for Civil buildings, and in the following years the programme will proceed at the rate of about a crore a year.

The estimated revenue for 1936-37 was given in the budget speech as Rs. 87.35 lakhs. Before dealing with the disposal of the surplus of Rs. 2.05 lakhs the Finance Member made mention of the ways and means position. He said:

The ways and means estimates for the current year provided £26 millions as the sterling requirements of the Secretary of State. Our revised forecast stands at £12 millions. This reduction is due to the large opening balance which the Secretary of State had on 1st of April 1935. It will be remembered that our remittance operations are now conducted through the Reserve Bank. For the 10 months up to the end of January the Bank has in fact purchased nearly £29 millions of sterling of which about £19½ millions is still shown among the assets of the Banking Department. In the Issue Department there are considerable sterling assets in excess of the statutory requirements and altogether the external position of the Bank is one of extraordinary strength. Next year we shall expect to call upon the Bank for £41 mil

lions and this includes the repayment of £16.8 millions of 5½ per cent. Stock, 1936-38 without fresh borrowing in London. On present showing there should be no difficulty whatever about achieving this programme.

He then announced that the remaining sum of Rs. 1,97 lakhs from 1935-36 would be transferred to a revenue reserve fund to help out the finances of the first year of Provincial Autonomy. Of the surplus for 1936-37 he said :

The most insistent demand with which I am confronted is the claim for the abolition of the emergency taxes upon income, and the House knows there exist certain pledges upon this subject given by my predecessor. The complete removal of the present surcharge of one-sixth on income-tax and super-tax would cost Rs. 2.76 lakhs per annum, while the abolition of the tax on incomes between Rs. 1,000 and Rs. 2,000, which, as I said last year, must also be included in the emergency class, would cost Rs. 47 lakhs. It is obvious that, if we are limited

to surrendering no more than Rs. 2 crores yearly we cannot meet the demand for the abolition in full. But we can go a good way towards it, and we propose to abolish the tax on lower incomes and to halve the present surcharge, leaving it in future at one-twelfth. In other words, we shall, in the last two years, have removed surcharges on income-tax and super-tax by two-thirds. The cost of the proposed reduction is Rs. 1,85 lakhs and the surplus for 1936-37 is reduced to Rs. 20 lakhs accordingly.

With no more than Rs. 20 lakhs left in hand, we can clearly make no further substantial cut in taxation, and we propose, therefore, to make a postal concession, which, though inexpensive, will, we believe, be generally welcomed, if not gratefully received. This is the increase in weight of the one-anna letter from half to one tola and the adoption of a scale of an additional half-anna for every additional tola. It will cost Rs. 13 lakhs yearly and it will absorb all but Rs. 2 lakhs of the expected surplus on the Posts and Telegraphs budget.

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strict theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers; the assessments proposed by him require the sanction of the Government before they become final in binding; and his judicial decisions may be

reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct; in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, *ryotwari* tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth or the gross produce is the extreme limit; below which the incidence of the revenue charge varies greatly. About sixteen years ago the

Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zemindari* tracts progressive moderation is the key-note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to

interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the Zemindars, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual; whereas under a *Zemindari* or kindred system the State would have gained nothing, however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurangzebe from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information:—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing); Baden Powell's "Land Systems of British India"; Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M. Joseph Chailley's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Governments.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in

intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowa flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British

India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

Reforms.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21. From that consumption reduced to proof gallons. 10 per cent. is deducted in the case of shops in Bombay City and 5 per cent. elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in

private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (*q. v.*). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken

in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent. annually in each subsequent year until exports were totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply: rock salt from the Salt Range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragars salt. Important works for the manufacture of that salt were opened in Dhrangadhira State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems. In the Punjab and Rajputana the salt manufacturers are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufacturers are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaon on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Rs. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Rs. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-0-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent.; but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in 1908. Since that date, of the five Collectorship at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I. C. S. (*i. e.*, "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 1d. in the pound; on incomes between 500 and

2,000 rupees at the rate of four pies in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Supplementary Finance Bill of 1931, when the scale was fixed as follows:—

(RATES OF INCOME-TAX.)

A. In the case of every individual, Hindu undivided family, unregistered firm and other association individuals not being a registered firm or company:—

RATE.

(Vide Footnote.)

- | | |
|---|--|
| (1) When the total income is less than Rs. 2,000. | Six pies in the rupee. |
| (2) When the total income is Rs. 2,000 or upwards, but is less than Rs. 5,000. | |
| (3) When the total income is Rs. 5,000 or upwards, but is less than Rs. 10,000. | Nine pies in the rupee. |
| (4) When the total income is Rs. 10,000 or upwards, but is less than Rs. 15,000. | One anna in the rupee. |
| (5) When the total income is Rs. 15,000 or upwards, but is less than Rs. 20,000. | One anna and four pies in the rupee. |
| (6) When the total income is Rs. 20,000 or upwards, but is less than Rs. 30,000. | One anna and seven pies in the rupee. |
| (7) When the total income is Rs. 30,000 or upwards, but is less than Rs. 40,000. | One anna and eleven pies in the rupee. |
| (8) When the total income is Rs. 40,000 or upwards, but is less than Rs. 100,000. | Two annas and one pie in the rupee. |
| (9) When the total income is Rs. 100,000 or upwards. | Two annas and two pies in the rupee. |

B. In the case of every company and registered firm whatever its total income.

N.B.—Additional tax (Sur-charge) for the financial year—

1931-32 at 12½ per cent.

and

1932-33 at 25 per cent.

over the rates prescribed by the Indian Finance Act, 1931, except in cases of income between Rs. 1,000 to Rs. 1,999.

Tax at 2 pies on incomes between Rs. 1,000 to Rs. 1,999 for the year 1931-32 and

Tax at 4 pies for the year 1932-33 on the same income.

The surcharge was continued in the budget of 1933-34, as resolved by the assembly the rate on incomes between Rs. 1,000 and Rs. 1,500 was reduced from 4 pies to 2 pies. The surcharge continued in 1934-35.

By the 1935-36 budget the surcharge and the rate on incomes between Rs. 1,000 and Rs. 2,000 was reduced by one-third. By the 1936-37 budget the surcharge was reduced by a further third and the tax on incomes below Rs. 2,000 abolished.

RATES OF SUPER-TAX.

In respect of the excess over thirty thousand of total income :—

	RATE.
(1) in the case of every company—	
(a) in respect of the first twenty thousand rupees of such excess.	Nil.
(b) for every rupee of the remainder of such excess :—	One anna in the rupee.
(2) (a) in the case of every Hindu undivided family :—	
(i) in respect of the first forty-five thousand rupees of such excess.	One anna and three pies in the rupee.
(ii) for every rupee of the next twenty-five thousand rupees of such excess.	Nil.
(b) in the case of every individual, unregistered firm and other association of individuals not being a registered firm or a company :—	
(i) for every rupee of the first twenty thousand rupees of such excess.	Nine pies in the rupee.
(ii) for every rupee of the next fifty thousand rupees of such excess.	One anna and three pies in the rupee.
(c) in the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or a company.	
(i) for every rupee of the next fifty thousand rupees of such excess.	One anna and nine pies in the rupee.
(ii) for every rupee of the next fifty thousand rupees of such excess.	Two annas and three pies in the rupee.
(iii) for every rupee of the next fifty thousand rupees of such excess.	Two annas and nine pies in the rupee.
(iv) for every rupee of the next fifty thousand rupees of such excess.	Three annas and three pies in the rupee.
(v) for every rupee of the next fifty thousand rupees of such excess.	Three annas and nine pies in the rupee.
(vi) for every rupee of the next fifty thousand rupees of such excess.	Four annas and three pies in the rupee.

RATES OF SUPER-TAX.

	RATE.
(vii) for every rupee of the next fifty thousand rupees of such excess.	Nil.
(viii) for every rupee of the next fifty thousand rupees of such excess.	Four annas and three pies in the rupee.
(ix) for every rupee of the next fifty thousand rupees of such excess.	Five annas and three pies in the rupee.
(x) for every rupee of the next fifty thousand rupees of such excess.	Five annas and nine pies in the rupee.
(xi) for every rupee of the remainder of such excess.	Six annas and three pies in the rupee.

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor-General in Council. The rest of the income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4), "subject to the control of the Governor-General in Council," but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1936-37 is Rs. 17,60 lakhs.

HISTORY OF THE COINAGE.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities; the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold

Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay**. It stated:—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,793 pieces of these new coins of the nominal value of Rs. 3.16.45.545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the **refining of gold** by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

Silver.

The weight and fineness of the silver coin are:—

	FINE SILVER grains.	ALLOY grains.	TOTAL grains.
Rupee	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41¼	3¾	45
Eighth of a rupee or 2-anna piece	20¾	1¾	22½

One rupee = 165 grains of fine silver.
One shilling = 80 ¾ grains of fine silver.
One rupee = shillings 2 0/430.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

	Grains
	troy.
Double piece or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pie being one-third of a pice or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows:—

	Standard weight in grains troy.	Diameter in millimetres.
Pice	75	25.4
Half-pice	37½	21.15
Pie	25	17.45

Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so

much importance, and they continue to bulk so largely in all Indian economic questions, than we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report it commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately eleven pence halfpenny, and they were sold to the public at

one and four pence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented

in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a

liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

MI. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the require-

ments of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the amount of the Gold Standard Reserve, one-half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Com-

mittee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR.

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £8 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction.	Minimum Rate for Immediate Telegraphic Transfers.
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
13th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to justify the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below:—

(i) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(iii) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(iii) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(iv) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(v) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(vi) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(vii) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(viii) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(ix) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(x) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11·30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(xi) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills; (b) abstention from purchase of silver; (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(xii) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(xiii) The import and export of gold to and from India should be free from Government control.

(xiv) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(xv) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coinage purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous: an important member of the Committee, Mr. Dadabhai Dalal, of Bombay, appended a minority report in which he urged the adoption of the following course:—

(a) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(h) "Reverse" drafts on London to be sold only at 1s. 329-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s. 43-32d. per rupee.

VI. THE TWO SHILLING RUPEE.

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling; that it should be linked at the rate of two shillings instead of the standard value, one and fourpence: all other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted.—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue, the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange; the market rate jumped up to two shillings eight pence.

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report; it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled a important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence halfpenny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always twopence or threepence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note Issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reverse Councils before abandoning

their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs. 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative; a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question:—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note.

(ix) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(x) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(xi) The legal tender quality of the sovereign and the half-sovereign should be removed.

(xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(xiii) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(xiv) One-rupee notes should be re-introduced and should be full legal tender.

(xv) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or silver rupees at the option of the currency authority.

(xvi) No change should be made in the legal tender character of the silver rupee.

(xvii) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(xviii) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(xix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(xx) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(xxi) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(xxii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(xxiii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(xxiv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(xxv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(xxvi) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(xxvii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(xxviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

(xxix) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(xxx) Measures should be taken to promote the development of banking in India.

(xxxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent.—Whilst all the members of the Commission signed the report, one of their number, Sir Purshotamdas Thakordas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that their efforts were emasculated by successive Secretaries of State, who had in view some which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms:—

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s. 6d. is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s. 6d., the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended."

A Survey.—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-trending of the path laid out in the introductory section, but this is unavoidable, if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked:—

"What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a 'limping standard.' The Royal Commission declares that 'in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange.' Later they show that 'the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency.....Under the Indian system, contraction is not, and never has been, automatic.'

"However, the standard limped along until the third year of the war. The exchange value of the rupee was stable; prices adjusted themselves to the ratio; Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages: it did not inspire public confidence; it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it; and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment: 'when allowance has been made for all misunderstandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections.'

"There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative; the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Babington Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, 'The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control.'

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupee to that standard, and to provide for its statutory control, automatic working and stability; to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency.—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member, Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz. bars; as soon as sufficient gold was available to put a gold coin in circulation; after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 887 million fine ounces, in ten years; the acquisition in all of £103 millions of gold; and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1·12 crore.

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices, throughout the world. The reaction on the silver market from the detronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs. 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency bills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard.—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking adrift from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity of safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard; its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demonetization of the sovereign to which a sentimental influence attaches. But whilst it does not do these things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India; indeed the Commission do not attempt to burke it. "The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless, . . . it has been undertaken by every other country that has adopted an effective gold standard: and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify." It is important, therefore, to examine the reserves and the procedure thereat.

The reserves held for the purpose of maintaining the value of the token currency are two-fold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows:—

Paper Currency Reserve.

	Rs.	Crores.
Silver coin	77	0
Silver bullion	7	7
Gold coin and bullion	22	3
Rupee securities	57	1
Sterling securities	21	0
	185	1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

The Gold Standard Reserve amounts at present to £40,000,000 invested in Gold and in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute; that gold and gold securities should form not less than 40 per cent. of the whole, with 50 to 60 per cent. as the ideal; and that the holding of gold, which now stands at about 12·8 per cent. should be raised to 20 per cent. as soon as possible, and to 25 per cent. in ten years. Generally, they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission, Sir Purbhudas Thakordas being the only dissentient, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence; the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

One principle advanced in Sir Dadiba Dalal's prophetic minority report in 1919, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declassing the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell; the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests, it recovered. In 1923, it was one shilling and fourpence sterling; in October, 1924, one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been re-established without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that "the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India; as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the "conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." Sir Purshotamdas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no ratio could be operative for over a year without inducing this result. But it is clear that the adjustments, especially in regard to wages in

Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent. of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house; the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months, but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion; there would be convulsive disturbance of the foreign trade; there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past; it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six; the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue.—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency; the actual currency of India is a token, the silver rupees and another token, the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899-1900; it compelled heavy purchases of silver, which invariably rose in prices as the Government came into the market; and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48s. an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. "No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value." Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself; it was always convertible on demand; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small de-

nomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, "and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them." There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option; but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfeelt. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank of India should the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League,

with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect:—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost or transport from Bombay to London. A rate of one shilling fivepence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the last few years made it increasingly difficult for the Government of India to maintain the statutory ratio, but their difficulties were solved when Great Britain went off the Gold standard in September 1931, and the rupee was linked to sterling. By the end of the year exports of commercial gold from India had begun to show their effects, and on December 30 the T.T. rate had risen to 1/6 $\frac{1}{4}$ compared with 1/5 $\frac{3}{4}$ on September 18.

The characters of the Reserves which are the backbone of the Indian currency system are shown below:

Composition of the Currency Reserve held against the note circulation at the end of each month (In lakhs of rupees.)

MONTH.	Gross circulation of notes.	COIN AND BULLION RESERVE.						SECURITIES.				
		Silver coin in India.	Gold bullion in India.	Silver bullion in India.	Gold bullion in England.	Silver bullion in England.	Gold bullion in His Majesty's Dominions. † Section 20 of the Indian Paper Currency Act, 1928.

Details of the balance of the Gold Standard Reserve on the 31st March 1935.

In England—

Estimated value on the 31st March 1934 of the sterling securities of the nominal value of £ 35,480,000 (as per details below)	£ 37,845,529
Gold	2,152,334
Cash at the Bank of England	2,137
TOTAL ..	40,000,000

Details of investments :—

	Face value £
British Treasury Bills	11,630,000
Treasury 2 per cent. Bonds, 1935-38	9,050,000
Treasury 2½ per cent. Bonds, 1937	3,650,000
Treasury 4½ per cent. Conversion Bonds, 1940-44	6,150,000
Treasury 5 per cent. Conversion Bonds, 1944-64	1,000,000
Treasury 4½ per cent. Conversion Bonds, 1944-49	5,000,000
TOTAL ..	36,480,000

THE RESERVE BANK.

The following Act of the Indian Legislature received the assent of the Governor-General on March 6, 1934, and is known as the Reserve Bank of India Act, 1934 :—

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage;

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system;

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures;

It is hereby enacted as follows :—

(1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of this Act.

(2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

Share Capital.—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register; and no person who is not—

(a) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or

(b) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, or

(c) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the

government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India,

shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor-General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (b) and (c) of sub-section (3) to be the parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely:—

(a) to the Bombay register—one hundred and forty lakhs of rupees;

(b) to the Calcutta register—one hundred and forty-five lakhs of rupees;

(c) to the Delhi register—one hundred and fifteen lakhs of rupees.

(d) to the Madras register—seventy lakhs of rupees.

(e) to the Rangoon register—thirty lakhs of rupees:

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register.

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares.

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares; and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

(7) If the number of such applicants is less than one-fifth of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one-half of such remaining shares to those applicants who have applied for less than five shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9).

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

Increase and reduction of share capital

—(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor General in Council and with the approval of the Central Legislature, to such extent and in such manner as may be determined by the Bank in General meeting.

(2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares constituting the original share capital.

(3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor General in Council.

(4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares.

The Bank shall, as soon as may be, establish offices in Bombay, Calcutta, Delhi, Madras and Rangoon and a branch in London, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor General in Council, elsewhere.

The general superintendence and direction of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

(1) The Central Board shall consist of the following Directors, namely :—

(a) a Governor and two Deputy Governors, or be appointed by the Governor General in Council after consideration of the recommendations made by the Board in that behalf.

(b) four Directors to be nominated by the Governor General in Council.

(c) eight Directors to be elected on behalf of the shareholders on the various registers, in the manner provided in section 9 and in the following numbers, namely :—

(i) for the Bombay register—two Directors;
(ii) for the Calcutta register—two Directors;

(iii) for the Delhi register—two Directors;
(iv) for the Madras register—one Director;
(v) for the Rangoon register—one Director;
and

(d) one government official to be nominated by the Governor General in Council.

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, with the approval of the Governor General in Council.

(3) A Deputy Governor and the Director nominated under clause (d) of sub-section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote.

Provided that when the Governor is absent a Deputy Governor authorized by him in this behalf in writing may vote for him.

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor General in Council may fix when appointing them, and shall be eligible for re-appointment.

A Director nominated under clause (b) or elected under clause (c) of sub-section (1) shall hold office for five years, or thereafter until his successor, shall have been duly nominated or elected, and, subject to the provisions of section 10, shall be eligible for re-nomination or re-election.

A Director nominated under clause (d) of sub-section (1) shall hold office during the pleasure of the Governor General in Council.

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of, the Board.

Local Boards.—(1) Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of—

(a) five members elected from amongst themselves by the shareholders who are registered on the register for that area and are qualified to vote, and

(b) not more than three members nominated by the Central Board from amongst the shareholders registered on the register for that area, who may be nominated at any time.

Provided that the Central Board shall in exercising this power of nomination aim at securing the representation of territorial or economic interests not already represented, and in particular the representation of agricultural interests and the interests of co-operative banks.

(2) At an election of members of a Local Board for any area, any shareholder who has been registered on the register for that area, for a period of not less than six months ending with the date of the election, as holding five shares shall have one vote, and each shareholder so registered as having more than five shares shall have one vote for each five shares, but subject to a maximum of ten votes, and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an employee of the Bank.

(3) The members of a Local Board shall hold office until they vacate it under sub-section (6) and, subject to the provisions of section 10, shall be eligible for re-election or re-nomination, as the case may be.

(4) At any time within three months of the day on which the Directors representing the shareholders on any register are due to retire under the provisions of this Act, the Central Board shall direct an election to be held of members of the Local Board concerned, and shall specify a date from which the registration of transfer from and to the register shall be suspended until the election has taken place.

(5) On the issue of such direction the Local Board shall give notice of the date of the election and shall publish a list of shareholders holding five or more shares, with the dates on which their shares were registered, and with their registered addresses, and such list shall be available for purchase not less than three weeks before the date fixed for the election.

(6) The names of the persons elected shall be notified to the Central Board which shall thereupon proceed to make any nominations permitted by clause (b) of sub-section (1) it may then decide to make, and shall fix the date on which the outgoing members of the Local Board shall vacate office, and the incoming members shall be deemed to have assumed office on that date.

(7) The elected members of a Local Board shall as soon as may be after they have been elected, elect from amongst themselves one or two persons, as the case may be, to be Directors representing to the shareholders on the register for the area for which the Board is constituted.

(8) A Local Board shall advise the Central Board on such matters as may be generally or specifically referred to it and shall perform such duties as the Board may, by regulations, delegate to it.

(1) No person may be a Director or a member of a Local Board who—

(a) is a salaried government official or a salaried official of a State in India, or

(b) is, or at any time has been, adjudicated an insolvent, or has suspended payment or has compounded with his creditors, or

(c) is found lunatic or becomes of unsound mind, or

(d) is an officer or employee of any bank, or

(e) is a director of any bank, other than a bank which is a society registered or deemed to be registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies.

(9) No two persons who are partners of the same mercantile firm, or are directors of the same private company, or one of whom is the general agent of or holds a power of procuration from the other, or from a mercantile firm of which the other is a partner, may be Directors or members of the same Local Board at the same time.

(3) Nothing in clause (a), clause (d) or clause (e) of sub-section (1) shall apply to the Governor, or to a Deputy Governor or to the Director nominated under clause (d) of sub-section (1) of section 8.

(1) The Governor General in Council may remove from office the Governor, or a Deputy Governor or any nominated or elected Director.

Provided that in the case of a Director nominated or elected under clause (b) or clause (c) of sub-section (1) of section 8 this power shall be exercised only on a resolution passed by the Central Board in that behalf by a majority consisting of not less than nine Directors.

(2) A Director nominated or elected under clause (b) or clause (c) of sub-section (1) of section 8, and any member of a Local Board shall cease to hold office if, at any time after six months from the date of his nomination or election, he is not registered as a holder of unencumbered shares of the Bank of a nominal value of not less than five thousand rupees, or if he ceases to hold unencumbered shares of that value, and any such Director shall cease to hold office if without leave from the Governor General in Council he absents himself from three consecutive meetings of the Central Board convened under sub-section (1) of section 13.

(3) The Governor General in Council shall remove from office any Director, and the Central Board shall remove from office any member of a Local Board, if such Director or member becomes subject to any of the disqualifications specified in sub-section (1) or sub-section (2) of section 10.

(4) A Director or member of a Local Board removed or ceasing to hold office under the foregoing sub-sections shall not be eligible for re-appointment either as Director or as member of a Local Board until the expiry of the term for which his appointment was made.

(5) The appointment, nomination or election as Director or member of a Local Board of any person who is a member of the Indian Legislature or of a local Legislature shall be void, unless, within two months of the date of his appointment, nomination or election, he ceases to such member, and, if any Director or member of a Local Board is elected or nominated as a

member of any such Legislature, he shall cease to be a Director or member of the Local Board as from the date of such election or nomination, as the case may be.

(6) A Director may resign his office to the Governor General in Council, and a member of a Local Board may resign his office to the Central Board, and on the acceptance of the resignation the office shall become vacant.

(1) If the Governor or a Deputy Governor by infirmity or otherwise is rendered incapable of executing his duties or is absent on leave or otherwise in circumstances not involving the vacation of his appointment, the Governor General in Council may, after consideration of the recommendations made by the Central Board in this behalf, appoint another person to officiate for him, and such person may, notwithstanding anything contained in clause (d) of sub-section (1) of section 10, be an officer of the Bank.

(2) If an elected Director is for any reason unable to attend a particular meeting of the Central Board, the elected members of the Local Board of the area which he represents may elect one of their number to take his place, and for the purposes of that meeting the substitute so elected shall have all the powers of the absent Director.

(3) Where any casual vacancy in the office of any member of a Local Board occurs otherwise than by the occurrence of a vacancy in the office of a Director elected by the Local Board, the Central Board may nominate thereto any qualified person recommended by the elected members of the Local Board.

(4) Where any casual vacancy occurs in the office of a Director other than the vacancies provided for in sub-section (1), the vacancy shall be filled, in the case of a nominated Director by nomination, and in the case of an elected Director by election held in the manner provided in section 9 for the election of Directors.

Provided that before such election is made the resulting vacancy, if any, in the Local Board and any vacancy in the office of an elected member of such Board which may have been filled by a member nominated under sub-section (3) shall be filled by election held as nearly as may be in the manner provided in section 9 for the election of members of a Local Board.

(5) A person nominated or elected under this section to fill a casual vacancy shall, subject to the proviso contained in sub-section (4), hold office for the unexpired portion of the term of his predecessor.

(1) Meetings of the Central Board shall be convened by the Governor at least six times in each year and at least once in each quarter.

(2) Any three Directors may require the Governor to convene a meeting of the Central Board at any time and the Governor shall forthwith convene a meeting accordingly.

(3) The Governor, or in his absence the Deputy Governor authorized by the Governor under the proviso to sub-section (3) of section 8 to vote for him, shall preside at meetings of the Central Board, and, in the event of an equality of votes, shall have a second or casting vote.

General Meetings.—(1) A general meeting (hereinafter in this Act referred to as the annual general meeting) shall be held annually at a place where there is an office of the Bank within six weeks from the date on which the annual accounts of the Bank are closed, and a general meeting may be convened by the Central Board at any other time:

Provided that the annual general meeting shall not be held on two consecutive occasions at any one place.

(2) The shareholders present at a general meeting shall be entitled to discuss the annual accounts, the report of the Central Board on the working of the Bank throughout the year and the auditors' report on the annual balance-sheet and accounts.

(3) Every shareholder shall be entitled to attend at any general meeting and each shareholder who has been registered on any register, for a period of not less than six months ending with the date of the meeting, as holding five or more shares shall have one vote and on a poll being demanded each shareholder so registered shall have one vote for each five shares, but subject to a maximum of ten votes and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an officer or employee of the Bank.

(1) The following provisions shall apply to the first constitution of the Central Board, and, notwithstanding anything contained in section 8, the Central Board as constituted in accordance therewith shall be deemed to be duly constituted in accordance with this Act.

(2) The first Governor and the first Deputy Governor or Deputy Governors shall be appointed by the Governor General in Council on his own initiative, and shall receive such salaries and allowances as he may determine.

(3) The first eight Directors representing the shareholders on the various registers shall be nominated by the Governor General in Council from the areas served respectively by those registers, and the Directors so nominated shall hold office until their successors shall have been duly elected as provided in sub-section (4).

(4) On the expiry of each successive period of twelve months after the nomination of Directors under sub-section (3) two Directors shall be elected in the manner provided in section 9 until all the Directors so nominated have been replaced by elected Directors holding office in accordance with section 8. The register in respect of which the election is to be held shall be selected by lot from among the registers still represented by nominated Directors, and for the purposes of such lot the Madras and Rangoon registers shall be treated as if they comprised one register only.

As soon as may be after the commencement of this Act, the Central Board shall direct elections to be held and may make nominations, in order to constitute Local Boards in accordance

with the provisions of section 9, and the members of such Local Boards shall hold office up to the date fixed under sub-section (6) of section 9, but shall not exercise any right under sub-section (7) of that section.

Business.—The Bank shall be authorized to carry on and transact the several kinds of business hereinafter specified, namely:—

(1) the accepting of money on deposit without interest from, and the collection of money for, the Secretary of State in Council, the Governor General in Council, Local Governments, States in India, local authorities, banks and any other persons;

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn on and payable in India and arising out of bona fide commercial or trade transactions bearing two or more good signatures, one of which shall be that of a scheduled bank, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn and payable in India and bearing two or more good signatures, one of which shall be that of a scheduled bank, or a provincial co-operative bank, and drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops, and maturing within nine months from the date of such purchase or rediscount, exclusive of days of grace;

(c) the purchase, sale and rediscount of bills of exchange and promissory notes drawn and payable in India and bearing the signature of a scheduled bank, and issued or drawn for the purpose of holding or trading in securities of the Government of India or a Local Government, or such securities of States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(3) (a) the purchase from and sale to scheduled banks of sterling in amounts of not less than the equivalent of one lakh of rupees;

(b) the purchase, sale and rediscount of bills of exchange (including treasury bills) drawn in or on any place in the United Kingdom and maturing within ninety days from the date of purchase, provided that no such purchase, sale or rediscount shall be made in India except with a scheduled bank; and

(c) the keeping of balances with banks in the United Kingdom;

(4) the making to States in India, local authorities, scheduled banks and provincial co-operative banks of loans and advances, repayable on demand or on the expiry of fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immovable property) in which a trustee is authorized to invest trust money by any Act of Parliament or by any law for the time being in force in British India;

(b) gold or silver or documents of title to the same;

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank;

(d) promissory notes of any scheduled bank or a provincial co-operative bank, supported by documents of title to goods which have been transferred, assigned, or pledged to any such bank as security for a cash credit or overdraft granted for *bona fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops;

(5) the making to the Governor General in Council and to such Local Governments as may have the custody and management of their own provincial revenues of advances repayable in each case not later than three months from the date of the making of the advance;

(6) the issue of demand drafts made payable at its own offices or agencies and the making, issue and circulation of bank post bills;

(7) the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of such purchase;

(8) the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of such securities of a local authority in British India or of such States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board:

Provided that securities fully guaranteed as to principal and interest by the Government of India, a Local Government, a local authority or a State in India shall be deemed for the purposes of this clause to be securities of such Government, authority or State;

Provided further that the amount of such securities held at any time in the Banking Department shall be so regulated that—

(a) the total value of such securities shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and three-fifths of the liabilities of the Banking Department in respect of deposits;

(b) the value of such securities maturing after one year shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits; and

(c) the value of such securities maturing after ten years shall not exceed the aggregate amount of the share capital of the Bank and the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits;

(9) The custody of monies, securities and other articles of value, and the collection of the proceeds, whether principal, interest or dividends, of any such securities;

(10) the sale and realisation of all property, whether movable or immovable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims;

(11) the acting as agent for the Secretary of State in Council, the Governor General in Council for any Local Government or local authority of State in India in the transaction of any of the following kinds of business, namely:—

(a) the purchase and sale of gold or silver;

(b) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company;

(c) the collection of the proceeds, whether principal, interest or dividends, of any securities or shares;

(d) the remittance of such proceeds, at the risk of the principal, by bills of exchange payable either in India or elsewhere;

(e) the management of public debt;

(12) the purchase and sale of gold coin and bullion;

(13) the opening of an account with or the making of an agency agreement with, and the acting as agent or correspondent of, a bank which is the principal currency authority of any country under the law for the time being in force in that country or any international bank formed by such banks, and the investing of the funds of the Bank in the shares of any such international bank;

(14) the borrowing of money for a period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed:

Provided that no money shall be borrowed under this clause from any person in India other than a schedule bank, or from any person outside India other than a bank which is the principal currency authority of any country under the law for the time being in force in that country;

Provided further that the total amount of such borrowings from persons in India shall not at any time exceed the amount of the share capital of the Bank;

(15) the making and issue of bank notes subject to the provision of this Act; and

(16) generally, the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under this Act.

When, in the opinion of the Central Board or, where the powers and functions of the Central Board under this section have been delegated to a committee of the Central Board or to the Governor, in the opinion of such committee or of the Governor as the case may be, a special occasion has arisen making it necessary or expedient that action should be taken under this section for the purpose of regulating credit in the interests of Indian trade, commerce, industry and agriculture, the Bank may, notwithstanding any limitation contained in sub-clauses (a) and (b) of clause (2) or sub-clause (a) or (b) of clause (3) or clause (4) of section 17.—

(1) purchase, sell or discount any of the bills of exchange or promissory notes specified in sub-clause (a) or (b) of clause (2) or sub-clause (b) of clause (3) of that section though such bill or promissory note does not bear the signature of a scheduled bank or a provincial co-operative bank; or

(2) purchase or sell sterling in amounts of not less than the equivalent of one lakh of rupees; or

(3) make loans or advances repayable on demand or on the expiry of fixed periods not exceeding ninety days against the various forms of security specified in clause (4) of that section:

Provided that a committee of the Board or the Governor shall not, save in cases of special urgency, authorized action under this section without prior consultation with the Central Board and that in all cases action so authorized shall be reported to the members of the Central Board forthwith.

Forbidden Business.—Save as otherwise provided in sections 17, 18 and 45, the Bank may not

(1) engage in trade or otherwise have a direct interest in any commercial, industrial or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims; provided that all such interests shall be disposed of at the earliest possible moment;

(2) purchase its own shares or the shares to any other bank or of any company, or grant loans upon the security of any such shares;

(3) advance money on mortgage of, or otherwise on the security of, immovable property or documents of title relating thereto, or become the owner of immovable property, except so far as is necessary for its own business premises and residences for its officers and servants;

(4) make loans or advances;

(5) draw or accept bills payable otherwise than on demand;

(6) allow interest on deposits or current accounts.

Central Banking Functions.

The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues and such States in India as may be approved of and notified by the Governor General in Council in the Gazette of India, and to make payments up to the amount standing to the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the public debt.

(1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall entrust the Bank, on such conditions as may be agreed upon, with all their money, remittance, exchange and banking

transactions in India and, in particular, shall deposit free of interest all their cash balances with the Bank:

Provided that nothing in this sub-section shall prevent the Governor General in Council or any Local Government from carrying on money transactions at places where the Bank has no branches or agencies, and the Governor General in Council and Local Governments may hold at such places such balances as they may require.

(2) The Governor General in Council and each Local Government shall entrust the Bank on such conditions as may be agreed upon, with the management of the public debt and with the issue of any new loans.

(3) In the event of any failure to reach agreement on the conditions referred to in this section the Governor General in Council shall decide what the conditions shall be.

(4) Any agreement made under this section to which the Governor General in Council or any Local Government is a party shall be laid, as soon as may be after it is made, before the Central Legislature and in the case of a Local Government before its local Legislature also.

Bank Notes.—(1) The Bank shall have the sole right to issue bank notes in British India, and may, for a period which shall be fixed by the Governor General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Government of India issued either by the Governor General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly.

(2) On and from the date on which this Chapter comes into force the Governor General in Council shall not issue any currency notes.

Issue Department.—(1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 34.

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve.

Bank notes shall be of the denominational values of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, unless otherwise directed by the Governor General in Council on the recommendation of the Central Board.

The design, form and material of bank notes shall be such as may be approved by the Governor General in Council after consideration of the recommendations made by the Central Board.

(1) Subject to the provisions of sub-section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor General in Council.

(2) On recommendation of the Central Board the Governor General in Council may, by notification in the Gazette of India, declare that with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

The Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor General in Council or the Bank the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note:

Provided that the Bank may, with the previous sanction of the Governor General in Council prescribe the circumstances in and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace and the rules made under this proviso shall be laid on the table of both Houses of the Central Legislature.

The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it.

(1) If in the opinion of the Governor General in Council the Bank fails to carry out any of the obligations imposed on it by or under this Act, he may, by notification in the Gazette of India, declare the Central Board to be superseded, and thereafter the general superintendence and direction of the affairs of the Bank shall be entrusted to such agency as the Governor General in Council may determine, and such agency may exercise the powers and do all acts and things which may be exercised or done by the Central Board under this Act.

(2) When action is taken under this section the Governor General in Council shall cause a full report of the circumstances leading to such action and of the action taken to be laid before the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board.

No person in British India other than the Bank or, as expressly authorized by this Act, the Governor General in Council shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person:

Provided that cheques or drafts, including hundis, payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent.

(1) Any person contravening the provisions of section 31 shall be punishable with fine which may extend to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(2) No prosecution under this section shall be instituted except on complaint made by the Bank.

Assets of the Issue Department.

(1) The assets of the Issue Department shall consist of gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.

(2) Of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or sterling securities:

Provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value.

(3) The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub-clause (a) or sub-clause (b) of clause (2) of section 17 or under clause (1) of section 15:

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanction of the Governor General in Council, such amount plus a sum of ten crores of rupees.

(4) For the purposes of this section, gold coin and gold bullion shall be valued at 8.47512 grains of fine gold per rupee, rupee coin shall be valued at its face value, and securities shall be valued at the market rate for the time being obtaining.

(5) Of the gold coin and gold bullion held as assets, not less than seventeen-twentieths shall be held in British India, and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies:

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as part of the assets.

(6) For the purposes of this section, the sterling securities which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of the United Kingdom, namely:—

(a) balances at the credit of the Issue Department with the Bank of England;

(b) bills of exchange bearing two or more good signatures and drawn on and payable at any place in the United Kingdom and having a maturity not exceeding ninety days;

(c) government securities of the United Kingdom maturing within five years:

Provided that, for a period of two years from the date on which this Chapter comes into force, any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding anything contained in section 17.

Liabilities of the Issue Department.—(1) The liabilities of the Issue Department shall be an amount equal to the total of the amount of the currency notes of the Government of India and bank notes for the time being in circulation.

(2) For the purposes of this section any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything contained in sub-section (2) of section 23, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be; but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council.

On the date on which this Chapter comes into force the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirements of section 33:

Provided that the total amount of the gold coin, gold bullion and sterling securities so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees:

Provided further that the whole of the gold coin and gold bullion held by the Governor General in Council in the gold standard reserve and the paper currency reserve at the time of transfer shall be so transferred.

(1) After the close of any financial year in which the minimum amount of rupee coin held in the assets, as shown in any of the weekly accounts of the Issue Department for that year prescribed under sub-section (1) of section 53, is greater than fifty crores of rupees or one-sixth of the total amount of the assets as shown in that account, whichever may be the greater the Bank may deliver to the Governor General in Council rupee coin up to the amount of such excess but not without his consent exceeding five crores of rupees, against payment of legal tender value in the form of bank notes, gold or securities:

Provided that if the Bank so desires and if the amount of gold coin, gold bullion and sterling securities in the assets does not at that time

exceed one-half of the total assets, a proportion not exceeding two-fifths of such payment shall be in gold coin, gold bullion or such sterling securities as may be held as part of the assets under sub-section (6) of section 33.

(2) After the close of any financial year in which the maximum amount of rupee coin held in the assets, as so shown, is less than fifty crores of rupees or one-sixth of the total amount of the assets, as so shown, whichever may be the greater the Governor General in Council shall deliver to the Bank rupee coin up to the amount of such deficiency, but not without its consent exceeding five crores of rupees, against payment of legal tender value.

(1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or sterling securities of less aggregate amount than that required by sub-section (3) of section 33 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative:

Provided that the gold coin and gold bullion held as such assets shall not be reduced below the amount specified in the proviso to sub-section (2) of section 33 so long as any sterling securities remain held as such assets.

(2) In respect of any period during which the holding of gold coin, gold bullion and sterling securities is reduced under sub-section (1), the Bank shall pay to the Governor General in Council a tax upon the amount by which such holding is reduced below the minimum "prescribed by sub-section (2) of section 33; and such tax shall be payable at the bank rate for the time being in force, with an addition of one per cent. per annum when such holding exceeds thirty-two and a half per cent. of the total amount of the assets and of a further one and a half per cent. per annum in respect of every further decrease, of two and a half per cent. or part of such decrease:

Provided that the tax shall not in any event be payable at a rate less than six per cent. per annum.

The Governor General in Council shall undertake not to re-issue any rupee coin delivered under section 36 nor to put into circulation any rupees, except through the Bank and as provided in that section; and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor General in Council under that section.

(1) The Bank shall issue rupee coin on demand in exchange for bank notes and currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906.

(2) The Bank shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or other coins which are legal tender under

the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation; and the Governor General in Council shall supply such coins to the Bank on demand. If the Governor General in Council at any time fails to supply such coins, the Bank shall be released from its obligations to supply them to the public.

Obligation to sell sterling.—The Bank shall sell, to any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty-nine sixty-fourths of a penny for a rupee:

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds.

Obligation to buy sterling.—The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three-sixteenths of a penny for a rupee:

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds:

Provided further that no person shall be entitled to receive payment unless the Bank is satisfied that payment of the sterling in London has been made.

Cash reserves of scheduled banks.—(1) Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent. of the demand liabilities and two per cent. of the time liabilities of such bank in India as shown in the return referred to in sub-section (2).

Explanation.—For the purposes of this section liabilities shall not include the paid-up capital or the reserves, or any credit balance in the profits and loss account of the bank or the amount of any loan taken from the Reserve Bank.

(2) Every scheduled bank shall send to the Governor General in Council and to the Bank a return signed by two responsible officers of such bank showing—

(a) the amounts of its demand and time liabilities, respectively, in India,

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin, respectively,

(d) the amounts of advances made and of bills discounted in India, respectively and

(e) the balance held at the Bank, at the close of business on each Friday or if Friday is a public holiday under the Negotiable Instruments Act, 1881, at the close of business on the preceding working day; and such return shall be sent not later than two working days after the date to which it relates:

Provided that where the Bank is satisfied that the furnishing of a weekly return under this sub-section is impracticable in the case of any scheduled bank by reason of the geographical position of the bank and its branches, the Bank may require such bank to furnish in lieu of a weekly return a monthly return to be dispatched not later than fourteen days after the end of the month to which it relates giving the details specified in this sub-section in respect of such bank at the close of business for the month.

(3) If at the close of business on any day before the day fixed for the next return, the balance held at the Bank by any scheduled bank is below the minimum prescribed in sub-section (1), such scheduled bank shall be liable to pay to the Bank in respect of each such day penal interest at a rate three per cent. above the bank rate on the amount by which the balance with the Bank falls short of the prescribed minimum, and if on the day fixed for the next return such balance is still below the prescribed minimum as disclosed by this return, the rates of penal interest shall be increased to a rate five per cent. above the bank rate in respect of that day and each subsequent day on which the balance held at the Bank at the close of business on that day is below the prescribed minimum.

(4) Any scheduled bank failing to comply with the provisions of sub-section (2) shall be liable to pay to the Governor General in Council or to the Bank, as the case may be, or to each, a penalty of one hundred rupees for each day during which the failure continues.

(5) The penalties imposed by sub-sections (3) and (4) shall be payable on demand made by the Bank, and, in the event of a refusal by the defaulting bank to pay on such demand, may be levied by a direction of the principal Civil Court having jurisdiction in the area where an office of the defaulting bank is situated, such direction to be made only upon application made in this behalf to the Court by the Governor General in Council in the case of a failure to make a return under sub-section (2) to the Governor General in Council, or by the Bank with the previous sanction of the Governor General in Council in other cases.

(6) The Governor General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any bank not already so included which carries on the business of banking in British India and which—

(a) has a paid-up capital and reserves of an aggregate value of not less than five lakhs of rupees, and

(b) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or a company incorporated by or under any law in force in any place outside British India,

and shall by a like notification direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid-up

capital and reserve becomes at any time less than five lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

The Bank shall compile and shall cause to be published each week a consolidated statement showing the aggregate of the amounts under each clause of sub-section (2) of section 42 exhibited in the returns received from scheduled banks under that section.

The Bank may require any provincial co-operative bank with which it has any transactions under section 17 to furnish the return referred to in sub-section (2) of section 42, and if it does so, the provisions of sub-sections (4) and (5) of section 42 shall apply so far as may be to such co-operative banks as if it were a scheduled bank.

Agreement with the Imperial Bank—

(1) The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side, and shall further contain the provisions set forth in the Third Schedule :

Provided that the agreement shall be conditional on the maintenance of a sound financial position by the Imperial Bank and that if, in the opinion of the Central Board, the Imperial Bank has failed either to fulfill the conditions of the Agreement or to maintain a sound financial position, the Central Board shall make a recommendation to the Governor General in Council, and the Governor General in Council, after making such further enquiry as he thinks fit, may issue instructions to the Imperial Bank with reference either to the agreement or to any matter which in his opinion involves the security of the Government monies or the assets of the Issue Department in the custody of the Imperial Bank, and in the event of the Imperial Bank disregarding such instructions may declare the agreement to be terminated.

(2) The agreement referred to in sub-section (1) shall, as soon as may be after it is made, be laid before the Central Legislature.

General Provisions.

The Governor General in Council shall transfer to the Bank rupee securities of the value of five crores of rupees to be allocated by the Bank to the Reserve Fund.

After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated

to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor General in Council :

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(1) Notwithstanding anything contained in the Indian Income-tax Act, 1922, or any other enactment for the time being in force relating to income-tax or super-tax, the Bank shall not be liable to pay income-tax or super-tax on any of its income, profits or gains :

Provided that nothing in this section shall affect the liability of any shareholder in respect of income-tax or super-tax.

(2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend, paid under section 47 of this Act shall be deemed to be "Interest on Securities."

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under this Act.

(1) Not less than two auditors shall be elected and their remuneration fixed at the annual general meeting. The auditors may be shareholders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re-election on quitting office.

(2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections :

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board.

Without prejudice to anything contained in section 50, the Governor General in Council may at any time appoint the Auditor General or such auditors as he thinks fit to examine and report upon the accounts of the Bank.

Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto; and every auditor shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ account

ants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the shareholders or to the Governor General in Council, as the case may be, upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the shareholders shall be read together with the report of the Central Board, at the annual general meeting.

Returns.—(1) The Bank shall prepare and transmit to the Governor General in Council a weekly account of the Issue Department and of the Banking Department in the form set out in the Fifth Schedule or in such other form as the Governor General in Council may, by notification in the Gazette of India, prescribe. The Governor General in Council shall cause these accounts to be published weekly in the Gazette of India.

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a copy of the annual accounts signed by the Governor, the Deputy Governors and the Chief Accounting Officer of the Bank, and certified by the auditors, together with a report by the Central Board on the working of the Bank throughout the year, and the Governor General in Council shall cause such accounts and report to be published in the Gazette of India.

(3) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank.

Agricultural Credit Department.—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Governor General in Council, Local Governments, provincial co-operative banks, and other banking organisations.

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks and any other banks or organisations engaged in the business of agricultural credit.

(1) the Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into

force, make to the Governor General in Council a report, with proposals, if it thinks fit, for legislation, on the following matters, namely:—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking, and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank.

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Governor General in Council.

(1) The Local Board of any area may at any time require any shareholder who is registered on the register for that area to furnish to the Local Board within a specified time, not being less than thirty days, a declaration, in such form as the Central Board may by regulations prescribe, giving particulars of all shares on the said register of which he is the owner.

(2) If it appears from such declaration that any shareholder is not the owner of any shares which are registered in his name, the Local Board may amend the register accordingly.

(3) If any person required to make a declaration under sub-section (1) fails to make such declaration within the specified time, the Local Board may make an entry against his name in the register recording such failure and directing that he shall have no right to vote, either under section 9 or section 14, by reason of the shares registered in his name on that register.

(4) Whoever makes a false statement in any declaration furnished by him under sub-section (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 193 of that Code.

(5) Nothing contained in any declaration furnished under sub-section (1) shall operate to affect the Bank with notice of any trust, and no notice of any trust expressed, implied or constructive shall be entered on the register or be receivable by the Bank.

(6) Until Local Boards have been constituted under section 9 the powers of a Local Board under this section shall be exercised by the Central Board in respect of any area for which a Local Board has not been constituted.

(1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of seventy-five per cent. and twenty-five per cent. respectively :

Provided that the total amount payable to any shareholder under this section shall not exceed the paid-up value of the shares held by him by more than one per cent. for each year after the commencement of this Act subject to a maximum of twenty-five per cent.

(1) The Central Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :—

(a) the holding and conduct of elections under this Act, including provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote ;

(b) the final decision of doubts or disputes regarding the qualifications of candidates for election or regarding the validity of elections ;

(c) the maintenance of the share register, the manner in which and the conditions subject to which shares may be held and transferred, and, generally, all matters relating to the rights and duties of shareholders ;

(d) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised ;

(e) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons ;

(f) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof ;

(g) the conduct of business of Local Boards and the delegation to such Boards of powers and functions ;

(h) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank ;

(i) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees ;

(j) the constitution and management of staff and superannuation funds for the officers and servants of the Bank ;

(k) the manner and form in which contracts binding on the Bank may be executed ;

(l) the provision of an official seal of the Bank and the manner and effect of its use ;

(m) the manner and form in which the balance-sheet of the Bank shall be drawn up and in which the accounts shall be maintained ;

(n) the remuneration of Directors of the Bank ;

(o) the relations of the scheduled banks with the Bank and the returns to be submitted by the scheduled banks to the Bank ;

(p) the regulation of clearing-houses for the scheduled banks ;

(q) the circumstances in which, and the conditions and limitations subject to which the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded ; and

(r) generally, for the efficient conduct of the business of the Bank.

(3) Copies of all regulations made under this section shall be available to the public on payment.

In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely :—

“ 11. Gold coins, coined at His Majesty's Royal Mint in England or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment or on account, but such coins shall be received by the Reserve Bank of India at its offices, branches and agencies in India at the bullion value of such coins calculated at the rate of 8.47512 grains troy of fine gold per rupee.”

The Indian Paper Currency Act, 1923, the Indian Paper Currency (Amendment) Act, 1923, the Indian Paper Currency (Amendment) Act, 1925, and the Currency Act, 1927, are hereby repealed.

In Sub-section, (3) of section 11 of the Indian Companies Act, 1913, after the word “Royal” the words “Reserve Bank” shall be inserted.

The Reserve Bank began work with the opening of the financial year 1935-36.

Trade.

India is pre-eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such year as 1896-97 and 1899-1900. Well over thirty per cent. of the culturable area of the Punjab is under irrigation, and huge new works are in progress to utilise the waters of the Sutlej, and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their food waters for Madras. All over India irrigation works, large and small, are being restlessly pressed forward, and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan, and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oilseeds and another produce, and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat, foreign coun-

tries are very important facts in the Indian export trade; therefore India had a vital interest in the economic recovery of Europe.

But whilst India is pre-eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry, which has its home in the town and Island of Bombay, with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal, and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa; the mills find their principal outlet in India itself, and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry, though large quantities of Indian pig iron are shipped to the Far East, and in some years to the western ports of North and South America. The sugar manufacturing industry has grown by leaps and bounds in recent years. Therefore, whilst India is still in the main an agricultural country, three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance, and their prosperity every year affects in an increasing degree the general prosperity of the people.

I.—GENERAL.

Agricultural Conditions in India.—The monsoon of 1934 appeared somewhat later than usual, but it gave, on the whole, fairly well-distributed rains. There were no prolonged breaks and the rainfall during the monsoon period was within 10 per cent. of the normal, except in Rajputana, Central India, and the Central Provinces, where it proved excessive and in Mysore and Madras where it was defective. During the retreating period of the monsoon the rainfall was in excess of the normal in Assam and Bengal, normal in Burma, Mysore and the Bombay Presidency, excluding Sind; elsewhere it was defective, particularly in the United Provinces. Taking the year as a whole, the rainfall was generally within 20 per cent. of the normal.

From the agricultural point of view, the season cannot, on the whole, be considered to have been very favourable. Compared with the

preceding season, the total outturn of rice decreased by 3 per cent., Burma, where the previous season was a very favourable one, recording a fall of 12 per cent. Prospects of a very good sugar cane crop were marred to some extent by the cold spell and frost in January. The outturn of jute increased by 6 per cent. as compared with the preceding season, but the yield of cotton decreased by 5 per cent., the crop being damaged by excessive rain and frost in some of the important growing tracts. Unfavourable seasonal conditions also affected the yield of groundnut, sesamum and castor seed crops. The wheat crop of 1933-34, which was mostly moved during the year under review, was about the same as in the previous season, but the outturn of rape and mustard, and linseed (winter oilseeds) recorded during 1933-34 declines of 10 per cent. and 7 per cent. respectively due largely to unfavourable weather conditions.

Volume of Trade.—In the following table the values of the imports and exports of merchandise have been compiled on the basis of the declared values in 1913-14 to afford some indication of

the changes in the volume of trade. These statistics are necessarily approximate but they are sufficiently accurate to afford a fair measure of the course of trade.

(In crores of Rupees)

	1913-14	1926-27	1927-28	1928-29	1929-30	1930-31	1931-32	1932-33	1933-34	1934-35
Imports	183	156	181	190	189	157	143	162	146	172
Exports	244	228	248	260	263	235	200	176	209	216
Total Trade in merchandise excluding re-exports ..	427	384	429	450	452	392	343	338	355	388

The table shows that there was a marked improvement during the year under review in the volume of both exports and imports, the recovery in the case of imports being larger than in the case of exports.

Prices in India.—The wholesale price level in India did not show any marked appreciation in the year under review, though the steady tone noticed in the latter half of 1933-34 was fully maintained. The Calcutta wholesale price index number (July 19 = 100) stood at 143 in September, 1930. In September, 1931, when Britain went off the gold standard, the index number stood at 91. The rupee, which was linked to sterling reacted to the immediate consequences of sterling's departure from gold, and the price level improved to 98 in December of the year. This advantage was not maintained in 1932 which saw a steady decline to lower levels, the index number falling to 88 in December, 1932. The early months of 1933 saw further weakness, but thereafter the price level steadied itself, and in December, 1933, the index number stood at 89. January saw an improvement by one point which was lost in the succeeding month, while in March there was a further fall to 88. During 1934-35 the price level generally fluctuated within a margin of two points from this level, the changes being more often in the upward direction; January, 1935, was however an exceptional month and saw a sharp rise by six points from 88 in the preceding month. This advance was only temporary and was due to a speculative rise in the price of cereals and oilseeds. In March, 1935, the index number stood at 87.

Imports.—The total value of the imports of foreign merchandise into British India during 1924-35 amounted to Rs. 132 crores, and that of exports, including re-exports, to Rs. 155 crores. Compared with the preceding year, there was an improvement of Rs. 17 crores or 13 per cent. in the case of imports and of Rs. 5 crores, or 3 per cent., in the case of exports, including re-exports. Of the principal items in the import trade which showed definite progress in 1934-35, cotton and cotton goods, which advanced by Rs. 5.74 lakhs, deserve mention first. Raw

cotton and cotton waste together accounted for an increase of Rs. 1.72 lakhs, while cotton manufactures improved by Rs. 4.02 lakhs. Imports of metals and ores improved by Rs. 1.88 lakhs, iron and steel being responsible for an increase of Rs. 85 lakhs, copper, wrought, for Rs. 52 lakhs, brass for Rs. 30 lakhs, and tin, unwrought, for Rs. 15 lakhs. Imports of vehicles improved by Rs. 1.83 lakhs. The number of motor cars imported rose from 9,759 to 14,494 and the value of the imports from Rs. 1.77 to Rs. 2.59 lakhs. The number of motor omnibuses imported rose from 5,496 to 9,973, with an increase in value from Rs. 66 to Rs. 1.21 lakhs. The value of grain, pulse, and flour imported in the year under review showed a marked increase of Rs. 1.82 lakhs (from Rs. 84 to Rs. 2.66 lakhs). This was principally due to the larger imports of rice, both husked and unhusked. Imports of wool, raw and manufactures, were responsible for an increase of Rs. 1.31 lakhs.

Exports.—On the export side, the principal increase was under raw cotton (+Rs. 57.91 lakhs). Compared with the preceding year, exports rose in quantity from 2,729 to 3,446 thousand bales, and in value from Rs. 26.59 to Rs. 34.50 lakhs. Export of lac improved by Rs. 84 lakhs. Other noticeable increases were under gunny bags (+Rs. 53 lakhs), wolfram ore (+Rs. 43 lakhs), raw rubber (+Rs. 34 lakhs), oil cakes (+Rs. 32 lakhs), teak wood (+Rs. 29 lakhs), fodder, bran, etc. (+Rs. 31 lakhs), tea (+Rs. 29 lakhs), manganese ore (+Rs. 29 lakhs) and mica (+Rs. 24 lakhs). Exports of raw jute improved slightly in quantity, but the value realised was a little less than in the preceding year. There were also decreases in the case of a number of other articles. Seeds showed a decline of Rs. 3.12 lakhs, linseed, groundnut and rapeseed being responsible for Rs. 1.58, Rs. 70 and Rs. 39 lakhs respectively. Raw skin fell in value by Rs. 1.21 lakhs, and raw wool by Rs. 71 lakhs. Exports of opium on private account recorded a fall of Rs. 66 lakhs. Other decreases were under hides, tanned or dressed (—Rs. 43 lakhs), gunny cloth (—Rs. 39 lakhs), paraffin wax (—Rs. 37 lakhs), coffee (—Rs. 30 lakhs), rice (—Rs. 20 lakhs) and cotton twist and yarn (—Rs. 19 lakhs).

Balance of Trade.—The visible balance of trade in merchandise and treasure for the year 1934-35 was in favour of India to the extent of Rs. 75½ crores as compared with Rs. 92 crores in 1933-34. The transactions in treasure on private account resulted in a net export of treasure amounting to Rs. 52½ crores, as against Rs. 57½ crores in the preceding year. Net exports of gold amounted to Rs. 52½ crores, while silver showed a net import of Rs. 37 lakhs. Net exports of currency notes amounted to Rs. 37 lakhs.

Tariff Changes.—The changes in the tariff made under the various Acts passed during the latter part of 1933 and the earlier part of 1934 were dealt with in the Review for the year 1933-34. Since then six Acts have been passed introducing various changes in the tariff. It was apprehended that with the imposition of a considerable duty on matches there would be an abnormal development in the use of mechanical lighters with a consequential loss of duty and interference with the business of the Indian match manufacturing industry. To counteract this possible danger to the industry and Government revenue, the Mechanical Lighters (Excise Duty) Act, 1934, was enacted. It imposed, with effect from the 19th August, 1934, a duty of excise at the rate of Rs. 1-8 on every mechanical lighter manufactured in British India and also revised the Customs duty on imported mechanical lighters by adding to the existing rate a duty equivalent to the new excise duty.

As stated in the last year's Review, the period of operation of the protective duties on certain manufactures of iron and steel was extended up to the 31st October, 1934. Meanwhile, in accordance with the provisions of the Steel Industry (Protection) Act, 1927, as subsequently amended, an enquiry as to the extent, if any, to which it is necessary to continue protection to the industry and as to the manner in which any protection found necessary should be conferred was made by the Tariff Board. The Iron and Steel Duties Act, 1934, gave effect on and from the 1st November, 1934, to the protective measures recommended by the Board. As the recommendations of the Board involved a very considerable reduction in the level of import duties in certain important cases with a resultant reduction in the revenue derived from Customs, it was found necessary to impose, as a revenue measure, with effect from the 1st November, 1934, an excise duty of Rs. 4 per ton on the production of steel ingots in British India, and to impose a countervailing customs duty equivalent to the excise duty on steel ingots. This countervailing duty is additional to the protective duties recommended by the Board and alternative to the *ad valorem* revenue duties on articles in respect of which protection had not been proposed.

The schedule of import duties contained in the Indian Tariff Act, 1894, became amorphous under the influence of a long succession of amending Acts and the numbering of the items lost its serial character. The classification of articles was also far from scientific, and in order to ascertain the amount of the duty imposed on many of the items contained in the schedule and the duration of the duty, it was necessary to collate the original Tariff Act with

various other Acts. With a view to consolidate as far as possible the provisions of law, which had to be sought in a multiplicity of enactments, into one measure the Indian Tariff Act, 1934, was passed. The Act though assented to by the Governor-General on the 8th September 1934, actually came into force on the 1st January, 1935. It made no change of substance in the existing law and was only a consolidating measure. The schedule of import duties appended to the Act exhibits as far as possible the actual rate of duty payable on each article under the tariff law for the time being in force. At the same time the items subject to duty have been re-arranged upon a scientific plan and for this purpose advantage has been taken of the logical scheme of classification of commodities evolved by the Economic Committee of the League of Nations for general international use by countries imposing tariffs on imports.

The protective duties of Rs. 2 per cwt. on wheat and Rs. 2-8 per cwt. on wheat flour expired on the 31st March 1935, but the Indian Tariff (Amendment) Act, 1935, which came into force on the 13th April 1935, imposed an import duty of Rs. 1-8 per cwt. on both wheat and wheat flour thus restoring the former equality in the levels of the duties on these two commodities. This Act also imposed a duty of 12 as. per Indian maund of 82½ lbs. avoidance on imported broken rice which constitutes the major portion of the imports of foreign rice into India and is a very serious competitor with certain of the better grades of rice produced in Madras. The duties imposed by this Act are protective measures which are to remain in force till the 31st March 1936.

The Salt Additional Import Duty (Extending) Act, 1935, extended the operation of the Salt (Additional Import Duty) Act, 1931, to the 30th April, 1936.

The Indian Finance Act 1935, which received the assent of the Governor-General on the 22nd April, 1935, reduced the import and excise duties on silver bullion and coin to 2 as. per oz. and abolished the export duty on raw skins. The reduced rates of import and excise duties in respect of silver bullion and coin were, however, actually brought into force from the 1st March, 1935, in exercise of the powers vested in the Governor-General in Council by Section 23 of the Sea Customs Act, 1878 and clause 8 of the Silver (Excise Duty) Order, 1930.

The Act further imposed specific duties on hardened or hydrogenated fish oil and whale oil, sugar candy, and household and laundry soap and increased the duties on boots and shoes and uppers therefor, silk or artificial silk mixtures, and certain kinds of cotton tents. The Act came into force on the 20th February, 1934, but the changes mentioned above became effective from the 23rd December, 1933, under the provisions of the Provisional Collection of Taxes Act, 1931.

The Wheat Import Duty (Extending) Act, 1934, extended the operation of the temporary import duty on wheat and wheat flour up to the 31st March, 1935. A Bill was introduced in March 1935 to reduce the wheat import duty from Rs. 2 to Rs. 1-8-0 per cwt.

The measures of protection afforded to certain manufactures of iron and steel by the Steel Industry (Protection) Act, 1927, as subsequently amended, the Wire and Wire Nail Industry (Protection) Act, 1932, and the Indian Tariff (Ottawa Trade Agreement) Amendment Act, 1932, were due to expire on the 31st March, 1934. The question of further protection, if any, to be granted to the steel industry was referred to the Tariff Board who were also asked to re-examine at the same time the measures of protection afforded to the industry by the Wire and Wire Nail Industry (Protection) Act, 1932, and the Indian Tariff (Ottawa Trade Agreement) Amendment Act, 1932. As the enquiry could not be completed before April, 1934, the operation of the three Acts mentioned above was extended, with a view to maintaining the continuity of the protective scheme, for a further period up to the 31st October, 1934, by the Steel and Wire Industries Protection (Extending) Act, 1934.

The Indian Finance Act, 1934, which was passed on the 29th March changed the duty payable on cigarettes to 25 per cent. *ad valorem* and in addition either Rs. 8-2 per 1,000 or Rs. 3-4 per lb. whichever is higher. It also increased the duty on unmanufactured tobacco to Rs. 3-4 per lb. (standard rate) and Rs. 2-12 per lb. (colonial preference rate), and reduced the duty on silver to 5 as. per oz. The Act further abolished the export duty on raw hides.

The Salt Additional Import Duty (Extending) Act, 1934, extended the operation of the Salt (Additional Import Duty) Act, 1931, to the 30th April, 1935, subject to certain modifications which were recommended by the Salt Industry Committee of the Legislative Assembly.

Textile Protection Act.—As a result of the denunciation by India of the Indo-Japanese Convention of 1904 in April, 1933, the question of the conclusion of a new commercial agreement between India and Japan had to be taken up. Pending the discussion of this question the operation of the protective duties on cotton piece-goods imposed by the Cotton Textile Industry (Protection) Act, 1930, as subsequently amended, which was due to expire on 31st October, 1933, was extended up to 31st March, 1934, by the Cotton Textile Industry Protection (Second Amendment) Act, 1933. The Cotton Textile Industry Protection (Amendment) Act, 1934, further extended by one month, up to 30th April, 1934, the operation of these duties pending the completion of consideration by the Indian Legislature of the Indian Tariff (Textile Protection) Amendment Act, 1934, which was passed on the 20th April, 1934. The latter Act gave effect to the conclusions of the Tariff Board recommending substantive protection to the cotton textile industry, modified in the light of the denunciation of the Indo-Japanese Trade Convention of 1904 and the subsequent conclusion of a new trade agreement with Japan and of the unofficial agreement between representatives of the Indian and the United Kingdom textile industries. It also gave effect to the decisions of the Government of India on the recommendations of the Tariff Board in regard to the claims of the sericultural industry to protection. The Act removed starch

and farina from the free list and made them able to a duty of 15 per cent. *ad valorem*. The duty on artificial silk yarn was raised to 25 per cent. *ad valorem* with an alternative minimum specific duty of 3 as. per lb. The Act further fixed the rate of duty on cotton piece-goods, not of British manufacture, at 50 per cent. *ad valorem* subject to a minimum specific duty of 5½ as. per lb. in the case of plain greys and made the following liable to protective duties:—

Raw silk, silk cocoons, silk waste and noils and silk yarn; cotton twist and yarn and cotton sewing or darning thread; fabrics of cotton, artificial silk or silk and of such mixtures; fabrics containing gold or silver thread; cotton knitted fabrics and certain kinds of cotton braids or cords, and of cotton hosiery.

The rates of duties on the following articles were also altered:—

Ribbons; socks and stockings made wholly or mainly from silk or artificial silk; tents not exceeding 4 yards in length; apparel, hosiery, haberdashery, millinery, drapery, hats, caps, bonnets and hatters' ware; and textile manufactures not otherwise specified.

The Act came into force on the 1st May, 1934, and the changes made therein shall have effect up to the 31st March, 1935.

The Sugar (Excise Duty) Act, 1934, received the assent of the Governor-General on the 1st May, 1934. It imposed, with effect from 1st April, 1934, on (i) *Khandasari* sugar and (ii) all other sugar, except *palmuira* sugar, produced in a factory in British India an excise duty of (i) 10 as. per cwt. and (ii) Rs. 1-5 per cwt. respectively.

The Matches (Excise Duty) Act, 1934, which also received the assent of the Governor-General on 1st May, 1934, imposed, with effect from 1st April 1934, on matches made in British India and sold in boxes or booklets containing on an average not more than eighty an excise duty of—

- (i) Rs. 1 per gross of boxes or booklets if the average number is forty or less,
- (ii) Rs. 1-8 per gross of boxes or booklets if the average number is more than 40 but less than 60, and
- (iii) Rs. 2 per gross of boxes or booklets if the average number is more than 60.

In exercise of the powers conferred by the Act the rate of excise duty on all other matches was fixed at 4 as. for every 1,440 matches or fraction thereof with effect from 3rd May, 1934. The Act also revised the customs duties on imported matches in such a manner as to comprise rates maintaining the existing measure of protection for the Indian industry over and above the equivalent of the new excise duty.

Besides the statutory changes mentioned above the period of operation of the additional protection accorded to iron or steel galvanised sheets, fabricated, and pipes and tubes made therefrom has been extended up to the 31st October, 1934, under section 3 (4) of the Indian Tariff Act, 1894. Similarly under section 3

(5) of the above Act the import duty on the non-British cotton piecegoods was reduced, as a result of the Indo-Japanese negotiations to 50 per cent *ad valorem* with a minimum specific duty of 5½ *as.* per lb. in the case of plain grey, with effect from the 8th January, 1934. As already stated in a previous paragraph, the statutory rate of duty on non-British cotton piecegoods was also fixed at this level with effect from the 1st May, 1934.

II—IMPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles imported into British India:—

IMPORTS.

(In thousands of Rupees.)

	1930-31.	1931-32.	1932-33.	1933-34.	1934-35.	Percentage on total import of mer- chandise in 1934-35.
Cotton and cotton goods ..	31,64,57	26,18,81	34,08,53	21,30,05	27,04,55	20.44

Cotton Manufactures (Rs. 22.24 lakhs).—There was a noticeable revival in the imports of cotton manufactures during the year under review, though the record of the year did not attain the 1932-33 level. This improvement was shared by all the principal sections of the trade. It would appear that the comparatively high off-take in 1932-33 worked itself out during that and the succeeding year in which the imports were on a more restricted scale, so that, in 1934-35 a revival of demand set in, assisted by some degree of improvement in general economic conditions. The total imports of cotton manufactures, excluding fents, in 1934-35 were valued at Rs. 21.76 lakhs, as compared with Rs. 17.29 lakhs in the year preceding and Rs. 26.31 lakhs in 1932-33. It may be noted that the imports in 1929-30, which may be taken as the last of the normal years, were valued at Rs. 58.59 lakhs; the descent from

this level in the succeeding years illustrates the shrinkage in trade that has since taken place.

The imports of cotton twist and yarn in 1934-35 were valued at Rs. 3.10 lakhs; the quantity which this value represented was 34 million lbs., compared with the preceding year, there was an increase of about 2 million lbs., or 6½ per cent. in quantity and Rs. 52 lakhs, or 20 per cent. in value. The increase, both in quantity and value, was due mainly to the larger imports of mercerised yarns. The imports of mercerised yarns during the year amounted to 7.7 million lbs. valued at a little over Rs. 88 lakhs, an increase of about 2.8 million lbs. in quantity, and about Rs. 39 lakhs in value. On the other hand, grey yarns, which constitute the bulk of the imports, fell by 1.6 million lbs. in quantity though actually there was an increase in the value of the imports by

nearly Rs. 3 lakhs. White or bleached yarns showed a small increase of 0.6 million lbs., in quantity and a little over Rs. 8 lakhs in value. Imports of coloured yarns also showed some improvements in quantity and contributed an increase of Rs. 2 lakhs in value.

The total shipments of cotton piecegoods, excluding fents received into British India advanced from 761 million yards in 1933-34 to 944 million yards in the year under review. Of this quantity Japan supplied 374 million yards as against 541 million yards in the preceding year, and the United Kingdom 553 million yards compared with 414 million yards in 1933-34. The total shipments were valued at Rs. 18,93 lakhs, or Rs. 3,89 lakhs more than in the preceding year.

Imports of grey goods were 68 million yards more than in the preceding year, and amounted to 298 million yards of which 194 million yards were supplied by Japan. There was an increase of 52 million yards in the imports from Japan, leaving 15 million yards out of the total increase of 68 million yards for the United Kingdom goods. Expressed in percentages, Japan's share increased by 37 and that of the United Kingdom by 17. White goods showed an increase of only 23 million yards, and this increase, along with about 35 million yards less imported by Japan, was absorbed mainly by the United Kingdom. The latter's share in the trade in this section increased by 29 per cent, while Japan's fell by 47 per cent. Coloured goods have in recent years been the most important item in the imports of piecegoods. In this section there was an advance of 92 million yards of which 71 million yards fell to the share of the United Kingdom. The imports from that country were 50 per cent. more than in the preceding year, while Japan's share increased by 16 million yards, or 13 per cent.

Of the total quantity of piecegoods imported, Bengal received 31 per cent., Bombay 28 per cent., Sind 25 per cent., Madras 7 per cent. and Burma 9 per cent.

The imports of cotton fents in the year under review amounted to 36 million yards valued at Rs. 48 lakhs as against 35 million yards valued at Rs. 45 lakhs in 1933-34. There was a remarkable increase in the supplies from Japan which rose from 8 to 23 million yards in quantity and Rs. 12 to Rs. 33 lakhs in value. Supplies from the United Kingdom and the United States of America, however, fell from 11 to 7 and 16 to 5 million yards in quantity and from Rs. 17 to Rs. 8 and Rs. 16 to Rs. 6 lakhs in value respectively. The import figures quoted above relate to fents of all lengths up to April, 1934, while in the subsequent months they refer to fents not exceeding 4 yards in length only. In spite of this limitation in the case of 1934-35 figures, they show an increase over the 1933-34 figures. The import duty on fents not exceeding 4 yards in length of non-British origin was reduced from 50 to 35 per cent. *ad valorem* with effect from May, 1934.

Imports of fents of all descriptions, including cotton as well as other fabrics, amounted to 52 million yards valued at Rs. 86 lakhs. Sup-

plies from Japan alone totalled 37 million yards, with a recorded value of Rs. 66 lakhs. The United Kingdom sent 9 million yards valued at Rs. 13 lakhs, and the United States of America 6 million yards valued at Rs. 6½ lakhs.

Silk, raw and manufactured (Rs. 3,37 lakhs).—Imports of raw silk were 22,17,000 lbs. as against 23,79,000 lbs. in 1933-34, while in value they were 57 lakhs as against 72 lakhs. China was the principal supplier. Imports of silk yarn totalled 32,93,000 lbs. valued at 78 lakhs. Imports were considerably larger than in the preceding year, and Japan was the chief supplier. Imports of silk piecegoods totalled 33 million yards, of which the bulk came from Japan. Total imports of goods of silk mixed with other materials amounted to 13.4 million yards as against 9.9 million yards in the previous year.

Artificial silk (Rs. 3,59 lakhs).—Imports of yarn reached a record level of 16.6 million lbs. Imports from Japan increased considerably and ousted Italy from the pre-eminence which she has long enjoyed in the Indian market. The United Kingdom share was very small. Piecegoods made entirely of artificial silk amounted to 67.6 million yards as compared with 40.4 million yards in the preceding year.

Wool, raw and manufactured (Rs. 3,86 lakhs).—Imports of raw wool as well as of manufactured goods showed increases in the year under review and the total consignments were valued at Rs. 3,86 lakhs, as compared with Rs. 2,55 lakhs in the preceding year and Rs. 2,96 lakhs in 1932-33. Nearly 6 millions lbs. of raw wool of three value of Rs. 41½ lakhs were imported during the year under review as compared with 5.1 million lbs. valued at Rs. 34 lakhs, imported in the preceding year. In the case of worsted yarn, imports from Japan in 1932-33 had amounted only to about 50,000 lbs. In the succeeding year her share increased to 465,000 lbs. and in the year under review to 1.3 million lbs. Of the total value of the imports of worsted yarn in 1934-35, *viz.*, Rs. 29 lakhs, Japanese consignments accounted for nearly Rs. 25 lakhs, a sharp advance over her imports in 1933-34 which were valued at only Rs. 7 lakhs.

Woolen Piece-goods (Rs. 1,30 lakhs).—Imports of woollen piece-goods both pure and mixed together during the preceding year were 11.5 million yards valued at Rs. 1,30 lakhs. In 1934-35 Japan for the first time captured the major share of the trade in woollen piecegoods, her share, including mixtures, being 7.3 million yards, showing an increase of 5.2 million yards over the preceding year. The United Kingdom's share in the imports, including mixtures was 4.2 million yards, an increase of 1 million yards over 1933-34.

Iron and Steel (Rs. 6,38 lakhs).—Imports into India of all classes of iron and steel including pig or old iron or steel in 1934-35 were returned at 370,000 tons as compared with 329,000 tons in the preceding year, an increase of about 12 per cent. Imports of pig iron declined from 2,000 tons in 1933-34 to 1,500 tons in 1934-35, the entire quantity having been received from the United Kingdom.

The following table shows the quantities and value of the principal descriptions of iron and steel imported into British India during the last three years.

	Quantity Tons (000)			Value Rs. (lakhs)		
	1932-33.	1933-34.	1934-35.	1932-33.	1933-34.	1934-35.
Steel angle and tee ..	11.8	11.4	13.8	10.2	10.9	14.1
Steel bars (other than cast steel) ..	69.2	66.1	62.0	56.8	63.0	68.8
Beams, channels, pillars, girders and bridgework	15.7	19.2	22.3	15.3	21.0	23.5
Bolts and nuts ..	6.5	7.6	10.2	18.3	21.1	28.6
Fencing materials (including fencing wire).	4.5	5.7	7.3	14.2	14.9	18.1
Hoops and strips ..	24.3	28.1	34.5	27.6	35.8	45.3
Nails, rivets and washers.	10.5	10.6	12.2	30.7	28.3	32.1
Galvanised sheets and plates ..	72.7	60.8	58.8	1,23.4	1,13.4	1,10.9

Sleepers and keys of steel or iron for Railways ..	3.4	2.9	4.3	4.3	4.2	6.5

Machinery and Millwork (Rs. 12.64 lakhs).—The following table analyses the imports of machinery according to classes during the past five years :—

	1929-30 Rs. (lakhs).	1931-32 Rs. (lakhs).	1932-33 Rs. (lakhs).	1933-34 Rs. (lakhs).	1934-35 Rs. (lakhs).
Prime-movers	4.12	1.56	1.00	1.21	1.44
Electrical	2.41	2.16	1.56	1.27	1.69
Boilers	1.09	56	45	66	44
Metal working (chiefly machine tools).	36	19	15	16	14
Mining	61	66	33	32	52
Oil crushing and refining	43	35	19	27	21
Paper mill	6	5	5	11	9
Refrigerating	20	10	9	9	11
Rice and flour mill	24	10	9	7	10
Saw mill	9	3	3	3	3
Sewing and knitting	85	51	45	50	83
Sugar machinery	9	30	1.53	3.36	1.05
Tea machinery	28	11	21	12	22
Cotton machinery	2.10	1.93	2.08	2.03	2.41
Jute mill machinery	1.44	32	36	32	54
Wool machinery	6	1	3	3	2
Typewriter, including parts and accessories	26	13	7	10	18
Printing and lithographing presses ..	23	15	9	15	15
Belting for machinery	90	50	53	46	50

Motor vehicles (Rs. 4.66 lakhs).—The import trade in motor vehicles had been for some time on a downward grade: the year under review, however, saw the first sign of an improvement and the value of the imports of all classes of motor vehicles increased from Rs. 2.43 lakhs in 1932-33 to Rs. 3.19 lakhs in 1933-34. The

increase was not entirely due to a normal annual demand but is accounted for, partly at least, by the subnormal importations of the preceding few years which evidently have failed to keep pace with the normal deterioration, though wear and tear, of the vehicles already on the road, making early replacement of running units necessary.

In the table following, imports of motor cars from the principal countries of consignment during the last 10 years are specified :—

Number of motor cars imported.

—	United Kingdom.	United States.	Canada.	France.	Italy.	Other Countries.	Total.
Year 1925-26	2,399	4,143	4,775	367	830	213	12,757
„ 1926-27	2,546	4,030	4,476	607	1,416	122	13,197
„ 1927-28	3,600	6,031	3,400	538	1,367	186	15,122
„ 1928-29	3,645	10,145	4,366	277	967	167	19,567
„ 1929-30	3,758	9,620	2,318	364	1,150	189	17,399
„ 1930-31	2,885	5,098	3,250	261	917	190	12,601
„ 1931-32	2,178	3,368	676	161	510	327	7,220
„ 1932-33	3,958	1,201	296	84	223	436	6,201
„ 1933-34	5,348	2,227	1,715	62	221	186	9,759
„ 1934-35	6,311	5,564	2,057	26	287	209	14,434

In the year under review, 6,311 cars were imported from the United Kingdom, 5,564 from the United States of America and 2,057 from Canada. As compared with the preceding year, there was an increase of 963 in the case of British cars, 3,337 in the case of cars consigned from the United States of America, and 342 in the case of Canada.

Hardware (Rs. 3.05 lakhs).—After a sharp decline by Rs. 99 lakhs to Rs. 2.61 lakhs in 1931-32, imports of hardware had rallied and reached Rs. 2.99 lakhs in 1932-33. In 1933-34, the imports fell to Rs. 2.88 lakhs but in the year under review the position again improved, imports being recorded at Rs. 3.05 lakhs.

Mineral oils (Rs. 6.07 lakhs).—Imports of kerosene, which amounted to 69 million gallons, showed an increase of about 11 million gallons. Imports of petrol at 1½ million gallons compared with 1.6 million gallons in the previous year and 5 million gallons in 1932-33. Imports of fuel oils advanced from 104 million gallons to nearly 111 million gallons.

Sugar (Rs. 2.11 lakhs).—The imports of sugar into British Indian ports during 1934-35 (excluding molasses) amounted nearly to 223,000 tons as compared with 261,000 tons in the preceding year and 370,000 tons in 1932-33. Taking the figures of imports through the Kathiawar ports also into account, imports during 1934-35 were very nearly 334,000 tons, about 800 tons only less than in the preceding year.

Chemicals (Rs. 2.92 lakhs).—Compared with 1933-34 there was an increase of Rs. 22 lakhs in the total value of chemicals imported. Imports of sodium compounds rose from 16,97,000 cwt. to 19,08,000 cwt. The total imports of acids were 36,000 cwt. as against 32,000 cwt. Imports of ammonia and salts thereof increased by 9,000 cwt. to 49,000 cwt. Consignments

of sulphur declined from 4,44,000 cwt. to 4,04,000 cwt.

Drugs and Medicines (Rs. 1.92 lakhs).—The imports under this head were valued at Rs. 1.92 lakhs which meant a decrease of 0.5 per cent. on the imports of the preceding year (Rs. 1.93 lakhs). Imports of quinine salts decreased from 127,600 lbs. valued at Rs. 32 lakhs to 107,600 lbs. valued at Rs. 26 lakhs. The decrease in the value of the imports under this sub-head, however, was more than counter balanced by an increase under proprietary and patent medicines from Rs. 31 lakhs to Rs. 39 lakhs.

Paper and Pasteboard (Rs. 2.73 lakhs).—The imports of paper and paste board combined increased from 2,564,000 cwt. valued at Rs. 2.63 lakhs in 1933-34 to 2,938,000 cwt. valued at Rs. 2.73 lakhs in 1934-35. Paper, all kinds accounted for 2,521,000 cwt. as against 2,247,000 cwt. in the preceding year and the improved demand was accompanied by a corresponding rise in value from Rs. 2.35 lakhs to Rs. 2.39 lakhs. Newsprinting paper decreased from 511,000 cwt. to 508,000 cwt. in quantity and from Rs. 46 lakhs to Rs. 40 lakhs in value. Other kinds of printing paper imported fell from 259,000 cwt. valued at Rs. 38 lakhs to 253,000 cwt. valued Rs. 35 lakhs.

Liquors (Rs. 2.36 lakhs).—The total imports were returned at 4.9 million gallons as compared with 4.8 million gallons in the previous year. Of the total quantity of liquors imported, ale, beer and porter counted for 73 per cent.

spirits for 23 per cent, and wines for 4 per cent. Imports of ale, beer and porter increased from 34,56,000 gallons to 35,93,000 gallons. Imports of spirit amounted to 11,29,000 gallons as compared with 12,13,000 gallons. The share of the United Kingdom in the total imports of spirits rose from 4,93,000 gallons to 5,03,000 gallons.

Salt (Rs. 52 lakhs).—As compared with 1933-34 there was an increase of 1 per cent. in quantity and of 4 per cent. in value in the imports of foreign salt. The total supplies received in 1934-35 were returned at 378,000 tons valued at Rs. 52 lakhs as against 373,000 tons valued at Rs. 50 lakhs in 1933-34. The bulk of the supplies was received, as usual, from Aden, including Dependencies.

Other Articles.—The table below shows the important items comprised in this group—

	1933-34.	1934-35.
	Rs. (lakhs).	Rs. (lakhs).
Instruments, apparatus, etc.	4.02	4.73
Dyeing and tanning substances	2.46	3.08
Spices	1.56	1.55
Glass and glassware	1.22	1.33
Precious stones and pearls, unset	75	50
Tobacco	72	62
Cement	22	24
Coal and coke	14	12

III.—EXPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles exported from British India:—

EXPORTS.

(In thousands of Rupees.)

	1930-31	1931-32	1932-33	1933-34	1934-35	Percentage on total exports of merchandise in 1934-35.
{ Cotton, raw and waste	46,72,65	23,78,19	20,69,95	26,97,79	34,99,34	23.15

TOTAL VALUE OF EXPORTS	2,20,49,26	1,55,88,86	1,82,27,21	1,46,81,49	1,51,21,44	100

Cotton (Rs. 34.50 Lakhs).—India's exports of raw cotton to Japan during 1934-35 amounted to 2,010,600 bales as compared with 1,022,400 bales in the preceding year, and 1,084,600 bales in 1932-33. The United Kingdom, which in 1933-34 had taken 342,000 bales as against 165,000 bales in 1932-33, took in the year under review, 347,000 bales.

Italy's purchases amounted to 278,000 bales as against 261,000 bales in the preceding year, but China restricted her requirements to 142,000

bales in the year under review. In the preceding year she had absorbed about 337,000 bales. German requirements fell from 246,000 bales to 153,000 bales while Belgium took 153,000 bales or about 9,000 bales more than in the preceding year. Other important customers were France (148,000 bales), (Spain 60,000 bales) and the Netherlands (46,000 bales). The total exports of cotton during the year amounted to 3,446,000 bales valued at Rs. 34.50 lakhs as compared with 2,729,000 bales valued at Rs. 26.59 lakhs in 1933-34.

Cotton Manufactures (Rs. 2.65 Lakhs).—The following table sets forth the quantities of piecegoods exported :—

	(In thousand yards.)		
	1932-33.	1933-34.	1934-35.
Cotton piecegoods—			
Grey	4,682	4,165	6,350
White	358	292	534
Coloured	61,402	52,004	50,809
TOTAL ..	66,442	56,461	57,693

Jute and Jute Manufactures (Rs. 32.34 lakhs).—The total exports of raw and manufactured jute during the year amounted to 1,437,000 tons, as compared with 1,420,000 tons in 1933-34, an increase of 1.2 per cent. There was, however, very little increase in the total value of the shipments which remained at about Rs. 324 crores. The exports of raw jute alone in 1934-35 amounted to 752,500 tons as against 748,200 tons in 1933-34 and 563,100 tons in 1932-33 with a value of Rs. 10.87 lakhs which was 34 per cent. of the total value of both raw and manufactured products shipped during the year. In spite of an increase in the exports by over 4,000 tons, the value of the shipments of raw jute declined by over Rs. 6 lakhs as compared with the preceding year. Exports in 1934-35 were the highest since 1929-30 in which year 807,000 tons were shipped abroad.

Exports to the United Kingdom in the year under review amounted to 166,000 tons as against 177,000 tons in the preceding year and 130,000 tons in 1932-33. German purchases fell off from 165,000 tons to 133,000 tons in 1934-35. Conditions in Germany were most difficult for the jute trade, and the jute mills suffered greatly under numerous decrees interfering with normal trade and freedom of manufacturers and merchants.

The total exports of gunny bags increased from 402 million to 423 million, while the total yardage of gunny cloth exported increased by ten million from 1,053 million yards to 1,063 million yards.

Foodgrains and flour (Rs. 11.84 lakhs).—The statement below shows the exports of food grains :—

	1933-34.	1934-35.
	Tons (000)	Tons (000)
Rice not in the husk ..	1,733	1,593
Rice in the husk ..	11	14
Wheat	2	11
Wheat flour	13	12
Pulse	104	112
Barely	14
Jowar and bajra ..	5	4
Maize	3
Other sorts	2	2
TOTAL Tons (000) ..	1,870	1,765
VALUE Rs. (lakhs) ..	1,175	1,184

Tea (Rs. 20.13 lakhs).—The total exports of tea in the year under review amounted to 325 million lbs. valued at Rs. 20.13 lakhs as compared with 318 million lbs. valued at Rs. 19.84 lakhs

in the preceding year. There was thus an increase of 2.2 per cent. in the quantity exported and of 1.5 per cent. in the value realised as compared with 1933-34. The average declared value per lb. of the exports in 1934-35 was 9 as. 11 p. as compared with 10 as. in 1933-34 and 7 as. 3 p. in 1932-33. There were no exports of green tea during the year under review. Exports to the United Kingdom during the year amounted to 288.5 million lbs. (89 per cent. of the total exports) as compared with 276.3 million lbs. (87 per cent.) in the preceding year. Demand from consuming centres being poor, a larger quantity was shipped to the United Kingdom than would otherwise have been the case and these shipments swelled the stock of tea held in that country. The total value of the consignments to the United Kingdom was Rs. 18 crores as compared with Rs. 17½ crores in 1933-34. Direct shipments to other countries generally declined, the important exceptions being an increase from 556,000 lbs. to 1,148,000 lbs., in the case of Arabia, and an unusually large shipment of 1.5 million lbs. to Chile. Shipments to Canada declined from 15.1 million lbs. to 12.8 million lbs., and those to the United States of America from 8.3 to 8 million lbs. Exports to Australia and New Zealand declined from 2 and 2.5 million lbs. to 1.8 and 1.1 million lbs. respectively. Ceylon took 3 million lbs. as compared with 3.2 million lbs. in the preceding year. Egypt's requirements fell from 1.3 million lbs. to about 0.7 million lbs. while exports to Iran dropped from 1.1 million lbs. to 0.3 million lbs. The U. S. S. R. took only 40,000 lbs. as against 708,000 lbs.

The exports of the various kinds of oilseeds during the last three years, compared with the pre-war figures of export, are shown in the table. The total exports of oilseeds of all kinds declined from 1,124,000 tons to 1933-34 to 875,000 tons in the year under review. The regulation or restriction of imports into European countries, especially Germany, France and Italy, have curtailed the demand for Indian oilseeds.

	Pre-war 1932-33 1933-34 1934-35 average			
	(Thousands of tons)			
Linseed ..	379	72	379	288

Groundnuts ..	212	433	547	511
Castor ..	114	86	82	69
Cotton ..	240	2	6	1
Sesamum ..	119	10	15	4
Copra ..	31
Others ..	85	15	22	15
TOTAL ..	1,453	733	1,124	875

Hides and Skins (Rs. 8.35 lakhs).—The total shipments of raw hides amounted to 22,600 tons, an increase of 2,300 tons over the preceding year. Exports of cow hides form the bulk of this item. Exports of raw skin declined to 15,160 tons. The demand for good skins fell to 13,900 tons. Exports of hides and skins, tanned or dressed, amounted to 17,900 tons.

The following table shows the details of the exports of lac:—

Exports of lac.

	1933-34		1934-35	
	Cwts.	Per cent.	Cwts.	Per cent.
Shellac and button lac	548,200	75	447,700	76
Stick lac and seed lac	159,100	22	93,700	16
Others	23,700	3	44,600	8
TOTAL ..	731,000	100	586,000	100

Raw Wool (Rs. 1.27 lakhs).—Exports of wool from India dropped from 55.4 million lbs. in 1933-34 to 34.1 million lbs. in the year under review. The shipments in 1934-35 were valued at Rs. 1.27 lakhs as compared with Rs. 1.98 lakhs in 1933-34. Exports to the United Kingdom fell sharply from 43.4 million lbs. to about 25.7 million lbs. Shipments to the United States of America declined from 7.6 million lbs. to 5.6 million lbs. and to Belgium from 2.7 million lbs. to 1.3 million lbs. France also curtailed her requirements and took 582,000 lbs. or 366,000 lbs. less than in the preceding year. Exports to the Netherlands and Canada, however, increased from 328,000 and 127,000 lbs. to 332,000 and 238,000 lbs. respectively in 1934-35.

Metals and Ores (Rs. 5.91 lakhs).—The total exports of ores amounted to 5,15,000 tons, exports of manganese ore out of this totalling 4,60,000 tons as compared with 2,66,000 tons in the previous year. Exports of pig iron advanced from 3,77,000 tons to 4,17,000 tons. Exports of wolfram from ore amounted to 5,600 tons. Shipments of pig lead advanced to 13,02,000 cwts.

Other Exports.—Other import and exports from India included oilseeds totalling 3,48,000 tons, paraffin wax 48,000 tons, coir manufactures 6,26,000 cwts., unmanufactured tobacco 28 million lbs., coffee 1,41,000 cwts. and dyeing and tanning substances 15,45,000 cwts.

Index Numbers of Prices.

The Director-General of Commercial Intelligence, Calcutta, publishes from time to time an addendum to the publication Index Numbers of Indian Prices 1861-1931 which brings up-to-date (1) the un-weighted index numbers of 28 exported articles; (2) the un-weighted index numbers of 11 imported articles; (3) the general un-weighted index number for 39 articles and (4) the weighted index numbers of 100 articles on base 1873-100.

The following table contains these index numbers since the year 1925 :—

Year.	Exported articles 28 (un-weighted).	Imported articles 11 (un-weighted).	General Index No. for all (39) Articles (un-weighted).	Weighted Index No. (100) Articles equated to 100 for 1873.
1925	233	211	227	265
1926	225	195	216	260
1927	209	185	202	258
1928	212	171	201	261
1929	216	170	203	254
1930	177	157	171	213
1931	125	134	127	157
1932	120	139	126	149
1933	118	128	121	139
1934	120	124	121	Not available.
1935	129	123	123	

Besides the above wholesale price index numbers, the Director-General of Commercial Intelligence, Calcutta, compiles a wholesale price index number for Calcutta while the Bombay Labour Office compiles similar statistics for Bombay and Karachi.

The following table gives these index numbers since 1925 :—

Wholesale price index numbers for Calcutta, Bombay and Karachi (Base 1914).

Year.	Calcutta.	Bombay.	Karachi.
1925	591	163	151
1926	148	149	140
1927	148	147	137
1928	145	146	137
1929	141	145	133
1930	116	126	108
1931	96	109	95
1932	91	109	99
1933	87	98	97
1934	89	95	96
1935	91	99	99

About the end of the year 1929 there began a sharp decline in wholesale prices which continued during 1930 and 1931. During 1932, wholesale prices showed a tendency to decline and in 1933 they definitely registered a fall reaching their lowest level. This downward trend was somewhat checked in 1934, while in 1935 there was a distinct rise in wholesale prices.

The various Provincial Governments publish in their respective *Gazettes* fortnightly and monthly statements of retail and wholesale prices of certain important commodities. In addition to these, however, some of the

Provincial Governments also publish working class cost of living index numbers. Such index numbers are being published regularly every month for the following centres: for Bombay, Ahmedabad, and Sholapur by the Labour Office of the Government of Bombay; for Nagpur and Jabulpore by the Department of Industries, Central Provinces and Berar; for seven centres in Bihar and Orissa by the Department of Industries, Bihar and Orissa, and for Rangoon by the Office of the Director of Statistics and Labour Commissioner, Burma, Rangoon.

The Bombay working class cost of living index number with base July 1914-100 stood at 105 in December 1935, the average for 1935 being 101. The Ahmedabad cost of living index number with base August 1926 to July 1927-100 stood at 71 in December 1935 while the Sholapur cost of living index number with base February 1927 to January 1928-100 stood at 70 in December 1935. The Nagpur cost of living index number on base January 1927-100 was 58 in December 1935 while the Jubbulpore Index on the same base was 56. For Rangoon, four different index numbers with base 1931-100 are compiled for (a) Burmese, (b) Tamils, Telugus and Oriyas, (c) Hindustanis and (d) Chittagonians. The Index Number in December 1935 for these were 87, 93, 94 and 87 respectively.

The catastrophic fall in prices which commenced at the end of 1929 continued also during 1931 although with less vigour than in 1930. In 1932 prices ruled at a slightly lower level than in 1931. In 1933 and 1934 the downward tendency of prices continued.

The inadequacy as also the general unreliability of Indian price statistics has been the

subject of comment by many committees and commissions of enquiry and the majority of the Indian Economic Enquiry Committee of 1925 made many suggestions for the improvement of price statistics and advocated the passing of a Census and Statistics Act. This latter suggestion was also endorsed by the Whitley Commission on Indian Labour and the Government of India have already taken up the recommendation which is under their consideration. Messrs. Bowley and Robertson who were invited by the Government of India to advise them on the question of obtaining more accurate and detailed statistics have also made certain recommendations for improving Indian price statistics. As regards the General Index number of wholesale prices in India they suggest the construction of a new index number on the model of that of the Board of Trade in England. With regard to index numbers of retail prices they recommend that the data should be compiled for India as a whole, and not for separate provinces, and that they should not be initiated till certain preliminary steps of improvement of the data suggested by them have been taken.

The Indian Stores Department.

A detailed account of the organisation of the Indian Stores Department at Government of India headquarters and of the successive orders issued by Government to assure as far as possible the purchase of stores of Indian manufacture or in India is to be found in earlier issues of the "Indian Year Book." The current rules to regulate stores purchase prescribe that preference in making purchases shall be given in the following order:—

First, to articles which are produced in India in the form of raw materials or are manufactured in India from raw materials produced in India, provided that the quality is sufficiently good for the purpose;

Second, to articles wholly or partially manufactured in India from imported materials, provided that the quality is sufficiently good for the purpose;

Third, to articles of foreign manufacture held in stock in India provided that they are of suitable type and requisite quality;

Fourth, to articles manufactured abroad which need to be specially imported.

The new rules were calculated materially to widen the scope of operations of the Department.

The total value of orders placed by the Department during the year 1933-34, the latest period for which figures are yet available, was Rs. 3,59,94,135 as compared with Rs. 3,30,90,903 during 1932-33. The increase amounts to Rs. 29,03,232 or 8.8 per cent., which is most satisfactory considering that throughout the year under review the necessity for the strictest economy in expenditure still continued, so that fewer indents were received for plant and machinery and stores required for new capital works, and indenting Departments continued to cut down their annual requirements of consumable stores to a minimum.

As a result of the close observance of the Rupee Tender Rules by departments of the Central Government and other provincial governments, the value of stores indents submitted for sending to the Director General, India Store Department, London, was Rs. 60,01,840 as against Rs. 74,36,880 in the preceding year.

The Department continued throughout the year to assist manufacturers in India to improve the quality of their products. The means adopted included technical advice and suggestions. Every endeavour was made to substitute supplies of indigenous manufacture, wherever possible, without sacrificing economy and efficiency.

The total expenditure during the year 1933-34 amounted to Rs. 22,69,675, showing an excess of Rs. 1,01,652 over the corresponding figures for the year 1932-33. The increase is chiefly due to the partial restoration of the emergency cut on salaries of the staff and partly to the normal growth of expenditure due to annual increments. The credit side of the account shows an increase of Rs. 1,81,205, the total earnings amounting to Rs. 11,97,491 against Rs. 10,16,286 during the preceding year. This improvement, it is satisfactory to note, is shared by all sections of the Department. The recoveries on account of purchase and inspection of stores against indents placed with the Department, advance by Rs. 43,932, while fees earned on stores inspected on behalf of other authorities and on tests and analyses carried out at the Government Test House and the Metallurgical Inspectorate exceeded the corresponding figures of the previous year by Rs. 1,39,891.

After covering the excess of Rs. 1,01,652 on the expenditure side, there was a net improvement of Rs. 79,553, in the balance sheet of the Department.

Bombay Stamp Duties.

(iii) In any other case	0 4	
(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand.		
Protest of Bill or Note	2 0	
Protest by the Master of a Ship	2 0	
Prozy	0 2	
Receipt for value exc. Rs. 20	0 1	
Reconveyance of mortgaged property—		
(a) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance.		
(b) In any other case	10 0	
Release—that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—		
(a) If the amount or value of the claim does not exceed Rs. 1,000—The same duty as a Bond for such amount or value as set forth in the Release.		
(b) In any other case	10 0	
Respondentia Bond—The same duty as a Bond for the amount of the loan secured.		
Security Bond—(a) When the amount secured does not exceed Rs. 1,000—The same duty as a Bond for the amount secured.		
(b) In any other case	10 0	
Settlement—The same duty as a Bond (but in its application to the cities of Bombay, Ahmedabad, Poona and Karachi the same duty as a conveyance if the property set apart is immovable and the purpose is one other than charitable or religious) for the sum equal to the amount or value of the property—settled as set forth in such settlement.		
Revocation of Settlement.—The same duty as a Bond (but in its application to the cities of Bombay, Ahmedabad, Poona and Karachi the same duty as a conveyance if the property set apart is immovable and the purpose is one other than charitable or religious) for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees.		
Share-warrant to bearer issued under the Indian Companies Act.—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.		
Shipping Order	0 1	
Surrender of Lease—When duty with which lease is chargeable does not exceed Rs. 5.—The duty with which such Lease is chargeable.		
In any other case	5 0	
Transfers of Shares—12 annas for every Rs. 100 or part thereof of the value of the shares.		
Transfer of debentures, being marketable securities whether the debenture is liable to duty or not, except debentures provided for by section 8—12 annas for every Rs. 100 or part thereof of the face amount of the debenture.		
Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs. 15—The duty with which such Bond, &c., is chargeable.		
In any other case	10 0	
—of any property under the Administrator General's Act, 1874, Section 31.	10 0	
—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares.		
Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer.		
Trust, Declaration of—Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15 0	
Revocation of—Ditto, but not exceeding	10 0	
Warrant for Goods	0 8	

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the *Indian Year Book*. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be:—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved; and

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the Extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

“The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country.”

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the Moderates and the Extremists was fundamental; the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi and his lieutenants. In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extreme leftists described as a climb-down, while the Liberals moved towards the left, with the result that for a time there appeared to be a commonness of purpose between the

Liberals and Congressmen. At its 1928 Session the Congress, while adhering to Independence, agreed to accept Dominion Status if granted, before the end of 1929. Things were tending towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance that Dominion Status would be the basis of discussion at the Round Table Conference to be convened in England between representatives of England and the two Indias. Here was the parting of the ways. The Liberals went their way and the Congress its own. In fulfilment of the “ultimatum” issued at its previous Session, the Congress, at its 1929 Session, declared for complete independence or “Purna Swaraj.” Throughout the year 1930 the Congress was engaged in a defiance of the law of the land which, it was hoped, would help India, to attain complete independence. Early next year the Congress actually suspended civil disobedience by virtue of an agreement arrived at with the Government, but the fulfilment of the terms of this agreement gave rise to trouble and another agreement was concluded.

As a result of this Mr. Gandhi, on behalf of the Congress, actually went to London to take part in the Round Table Conference. While he was away things took a turn for the worse in the country, and matters reached a crisis with the birth of the New Year. In 1932 the Government bent all its efforts to making it impossible for the Congress to carry on its subversive activities and succeeded fully in its object. Congress was crushed and all forms of Congress work throughout the country were successfully prevented. In fact as well as in law Congress ceased to exist. In the middle of 1934 the civil disobedience movement, which had rendered the Congress illegal, was withdrawn. At present, the Congress is once again a constitutional organisation, most of whose activities are legitimate and lawful. It once again decided to contest elections to the legislatures. Mr. Gandhi, is no longer at its head, having retired from it and from politics, although he is “the power behind the throne.” He is concentrating his attention on the revival and development of dying or dead village industries. Early in 1936 a new term was given to Congress policy by Pandit Jawaharlal Nehru, the Socialist leader, but the majority of Congressmen show no desire to follow him. (See earlier editions of the *Indian Year Book* for a history of the non-co-operation and civil disobedience movements.)

The Congress in 1934-35.

The position of the Congress early in 1934 was that of an institution existing only in name. Individual civil disobedience had long ceased to exist. Every Congress and allied organisation was under the Government ban. Most Congress leaders were in jail. Pandit Jawaharlal Nehru was prosecuted and sentenced to two years' imprisonment for sedition in respect of certain advice he gave to the youth of Bengal. Mr. Gandhi's own personal influence, which had suffered considerably owing to the failure of his second civil disobedience movement, was further reduced by the opposition which his Harijan campaign produced among orthodox Hindus. Government showed no inclination

to relax their measures against the Congress as long as the latter was committed on paper to a lawless campaign.

It was in these circumstances that a group of prominent Congressmen, who had come out of jail, met in Bombay to consider the advisability of a re-orientation of Congress policy. The rank and file of Congressmen regarded the move with suspicion and thought that it was intended to go back on the policy which had been practised since 1930. Premature disclosure in the press of the intention of these leaders caused an uproar, and the promoters beat a hasty, but temporary, retreat.

Meanwhile Dr. Ansari, Dr. B. C. Roy and other leaders held consultations with Mr. Gandhi and apparently brought to his notice the feeling of restlessness among the Congress workers. The shrewd dictator perceived that revolt was in the air and he was not slow to yield.

Leaders had already met in Delhi and had decided on a tentative programme to revive the Swarajya Party of 1923-24. Mr. Gandhi gave formal sanction to this proposal, and at the same time withdrew individual civil disobedience which was decided upon at Poona in the previous year. But he seemed in no mood to abandon the principle. Although he was agreeable to disassociate the Congress as an institution from the lawless movement, he declared that his faith in Satyagraha was so strong that he could never give it up, and reserved to himself the right to practise civil disobedience, if and when the "inner man" called upon him to do so. At the same time he made it clear that he did not want either the Congress as an institution or any Congressman individually to follow his footsteps. Although he refused to change his own opinion with regard to the Council programme, he was tolerant enough to welcome the revival of the Swarajya Party and the decision to take part in the impending election to the Assembly.

A meeting of those in favour of entering the Councils was held at Ranchi in May, when the policy and programme of the party were finally adopted. It was made clear that they would not enter the legislatures with a view to co-operating with Government and working the reforms embodied in the White Paper, but to carry on the fight within the constitution itself. Some of the objects of the party were to secure the repeal of "repressive laws", to agitate for the release of all political prisoners, to resist all acts which might be calculated to exploit the country, to move resolutions and introduce and support measures and bills necessary for the healthy growth of national life and the consequent displacement of the bureaucracy, and generally to work for the economic, social and political improvement of the masses.

The withdrawal of individual civil disobedience was proposed by Dr. Ansari. Council enthusiasts, who were diffident about the success of their move, had the satisfaction of finding that not only did the All-India Congress Committee adopt their proposal but it went a step further and actually undertook to conduct the Council programme in the name of the Congress itself. The A. I. C. C. agreed to set up a Con-

gress Parliamentary Board, to organise and conduct the election campaign and to give directions to the Congress nominees in the Assembly from time to time.

The Patna meeting is important in that it showed that although Mr. Gandhi had failed in his civil disobedience movement and although he uttered some unpopular remarks before and during the proceedings of the A. I. C. C., his hold on the rank and file of Congressmen was so strong that his new scheme went through unscathed. Another feature of the Patna meeting was the evidence it afforded of the growing strength of the Socialist section inside the Congress.

The next phase in recent Congress history occurred in Bombay, where a meeting of the executive of the Congress was held. Soon after the Swarajist meeting at Ranchi it became evident that a large section of Congressmen were opposed to the manner in which the Swarajists fought shy of the Communal Award. The Hindu element in the Congress was very loud in protesting that a national institution like the Congress ought not to be silent when "an unnatural award" was sought to be thrust on the nation. It was argued that the Communal Award and the separate electorates which it perpetuated would inevitably tend to break up the country into watertight communal compartments and discourage the fusion of the various communities into one nation. The accusation was openly made that Mr. Gandhi and the Swarajist leaders of the Congress, in their anxiety to rush through their Council programme, had capitulated to the Nationalist Muslims in the Congress and surrendered the legitimate rights and interests of the Hindu community.

The Hindu party was in a minority in the Working Committee, and Pandit Malaviya and Mr. Aney had no course but to resign from the Committee. The cleavage which occurred in Bombay grew wider as the controversy spread all over the country.

This breakaway from the Congress was hailed by moderate elements in the country as the possible nucleus of a moderate progressive party. Pandit Malaviya himself at first encouraged this hope and many were expecting that the new party would so frame its creed and policy as to admit non-Congress progressives. A conference was held in Calcutta in the autumn to inaugurate the new party, but Pandit Malaviya was overwhelmed by Bengal Congressmen, who refused to agree to the membership of the party being thrown open to non-Congressmen. In the result the new party was formed as a dissident section within the Congress itself.

Meanwhile the Congress Parliamentary Board organised a country-wide campaign to capture seats in the Assembly. Government were for a time undecided on the question of the dissolution of the old Assembly, and it was known that lengthy correspondence was going on between Delhi and Whitehall. Eventually, however, it was decided to dissolve the old Assembly, but long before the decision was announced the Congress Party had entered the election arena. The newly formed Nationalist Party also entered the lists and put up a bold

fight. Between the war cries of these two parties the slogans of less vocal organisations like the Liberals, Independents and the Justices in Madras were lost. Moreover, a great wave of enthusiasm swept the country following the holding of the Congress session in Bombay in October, 1934, after four and a half years' inactivity. Efficient organisation and popular sentiment strengthened the Congress candidates, who scored a signal victory at the polls in November.

In the midst of the election campaign, Mr. Gandhi announced his intention to retire from the Congress and active political life. Various interpretations were put upon this announcement. Mr. Gandhi's own reasons were that he found that the rank and file of Congressmen were not true to the Congress creed of peace and non-violence, that they had slid down from the pinnacle of Satyagraha, and that in the circumstances he had no place in the Congress. Another argument advanced by him was that his presence only encouraged hypocrisy among them and he was a dead weight on the Congress which, instead of benefiting by his presence and leadership, was actually handicapped and deteriorated into a corrupt, inefficient and untruthful organisation. Critics regarded Mr. Gandhi's decision as a confession of failure and saw in it a desire to make a graceful retreat from an organisation which he had failed to lead to victory.

Soon after Mr. Gandhi's decision to withdraw individual civil disobedience there was a general demand in the country that Government should lift the ban on the Congress and allied organisations and that political prisoners should be set free. Government responded to this appeal by removing the ban on the Congress and putting no obstacles in the way of the meeting of the A. I. C. C. which was held at Patna. Gradually one by one of the restrictions imposed on the Congress organisations were removed, except the ban on the Red Shirt organisation in the North-West Frontier Province and on other organisations which were proved to be guilty either of violence or of terrorist inclinations. The list of political prisoners was carefully gone through and those who were not guilty of any crime involving violence were released one after another. Buildings and other property belonging to the Congress, which had been confiscated during the 1932 civil disobedience movement, were restored to the Congress, which once more became a live organisation. The session called in October was marked by a newly generated vigour.

Babu Rajendra Prasad, who had shown marked ability in conducting relief operations in the earthquake-stricken area of Bihar, was unanimously voted to the chair and the city of Bombay accorded a unique welcome to the president-elect on his arrival. The session itself, from a spectacular point of view, was an undoubted success. There was a touch of the tragic in the retirement of Mr. Gandhi which took place at the end of the session. But those who stayed behind reconciled themselves to the inevitable and pleaded with the rank and file to accept it in a philosophic spirit and to run the Congress with ever greater zeal.

The most outstanding achievement of the Congress was the reform of the Congress constitution which was effected at the instance of Mr. Gandhi. Till then it had been a loosely knit organisation with the elective element functioning indifferently. The annual session was a huge gathering which was more spectacular than efficient in the conduct of business. Mr. Gandhi converted it into a compact steel frame affair, reducing the number of delegates from thousands to a few hundreds and introducing the element of indirect election in the A. I. C. C. Primary Congress members were to elect the office bearers of their respective local territorial organisations who in their turn were to send representatives to the provincial executive, whose nominees comprised the A. I. C. C. The members of the A. I. C. C. were to constitute the delegates at the open session. The scheme met with a great deal of opposition, but Mr. Gandhi's influence on the eve of his retirement was so great that the session adopted his suggestions without even having seen the various propositions in print. He brought a rough draft with him, made a cursory review of it, explained the broad principles underlying them and the meeting said "Yes" to his proposals.

No less important was the creation under the aegis of the Congress of a Village Industries Association. It was to be an organisation of the Congress, but not in the Congress. Its work was to be done with the blessing and support of the Congress, but its management was to rest with Mr. Gandhi.

When the report of the Joint Parliamentary Committee was published towards the end of the year the Congress joined the general outburst of protest. Every section of political opinion, Liberals, Congressmen, Socialists and even people who were known to be the supporters of Government were opposed to the recommendations of the Joint Parliamentary Committee, which were regarded as more reactionary than the provisions of the White Paper.

This inability on the part of the Congress to join hands with others was responsible for the failure of Congress members in the Assembly to fulfil their election pledges as far as the "rejection" of the White Paper scheme was concerned. Congress members' speeches contained no mention of the constituent assembly, while the motions sponsored by them avoided the word "rejection". Their attitude of neutrality towards the Award until an agreed scheme was evolved was also turned down by a combination of Muslim and Nationalist votes. Their neutrality in respect of a Muslim proposal accepting the Award resulted in the Assembly according its approval to the Award. Eventually a motion made by Mr. Jinnah, in effect accepting provincial autonomy with certain modifications but rejecting the federal scheme, was carried with Congress support.

Side by side with the Assembly's session the Hindu opponents of the Communal Award and the Muslim supporters thereof organised two conferences, one to condemn it and the other to approve of it. The communal feeling generated by these two conferences embittered the atmosphere.

Indian Princes.

During the past four or five years the Indian Princes have figured largely in discussions on the future constitutional machinery of British India. They became actively interested in British Indian Reforms with the announcement made by representative Princes at the First Round Table Conference that they would join an All-India federation provided there were adequate safeguards for them. This enthusiasm, however, waned in 1931 when some prominent Princes began to entertain doubts about the advisability of their joining the Federation. The Congress resolution which set its goal as the establishment of a socialist state and the subsequent pronouncements of Congress leaders, including Mr. Gandhi, on their intentions if they gained power, made the Princes pause before they plunged. The Maharaja of Patiala was the first to come into the open to warn his brother Princes against the dangers to their very existence involved in the Federal Structure Committee's plan. He declared that smaller States were bound to suffer the fate of the smaller German principalities under the Confederation of 1815 and disappear from the map of India. He suggested the advisability of a Union of Indian States directly in relationship with the Crown. He was later followed by other Princes, who shared his fears, and the view gained in strength that unless adequate guarantees were given for the continued maintenance of their rights and privileges, they should not give their consent to join the proposed Federation.

When the Maharaja of Bikaner accepted the idea, on behalf of his brother Princes, at the All-India Federation, no details of the scheme for the entry of the Princes were discussed. When the question was later gone into at the Federal Structure Sub-Committee of the R. T. C. it became evident that the Princes had a number of mental reservations and conditions precedent to their entry. On their return to India they had mutual consultations and the Maharaja of Patiala became the sponsor of a modified plan of federation, namely, that, instead of each Ruler entering the Federation singly on his own terms, the matter should be discussed by the Chamber of Princes and the terms for their entry should be so settled that the Princes as a body should form one group of their own and join the federation only for certain specific purposes and to the extent that they consented to do so.

This gave a new aspect to the whole question. For some time there was difference of opinion between one section of Princes led by the Maharaja of Bikaner and another led by the Maharaja of Patiala.

Later on they arrived at a settlement between themselves and a common plan was evolved whereby the Princes were to settle the terms of entry of all of them; it was also proposed that unless a proportion of over fifty per cent. of the States joined no State should join singly. As regards their representation in the two Federal Chambers, it was found that however widely the legislatures were enlarged seats could not be provided for each one of the 600 odd Indian States. Out of these 600 more than half are what may be called small or minor States. And the larger States like Hyderabad, Mysore and Baroda naturally objected to be placed on the same

level as the smaller States which are no more than mere principalities. Then an attempt was made to give representation to the smaller States on the group system. At the meeting of the Chamber of Princes held in Delhi in March 1933 the Princes made a serious attempt to bring about a settlement of this question. Efforts were also made since then to settle this thorny problem, but the general opinion seemed to be in favour of leaving it to be settled by Government.

Apart from this, the main anxiety of the States in joining the federation is that their integrity and their rights under treaties should not in any way be affected except to the extent that they voluntarily agree to accede in what are called treaties of accession. They fear that once they enter democratic chambers they will not be able to hold on against the onslaught of democracy and by a process of wearing down they will soon be reduced to the position of mere principalities. It was with this object that the late Jam Sahab of Nawanganar, as the Chancellor of the Chamber of Princes, proposed several safeguards for guaranteeing the position of the States against the danger foreshadowed above.

Almost all the Princes of India or their representatives had gathered at Delhi about the time of the publication of the White Paper. The scheme was generally supported by the Princes, subject to the incorporation in the Constitution Act of safeguards for the maintenance of internal autonomy, an equitable distribution of seats among the States in the federal legislature and a satisfactory settlement of the claims made by the Princes under the vague term "paramountcy."

Interest next shifted to London where the Joint Parliamentary Committee took evidence on the Reforms proposals. Representatives of the Standing Committee of the Princes' Chamber demanded statutory provisions rendering it permissible for States to enter the proposed Federation collectively through a confederation, measures to secure weightage for the representation of States in the Legislature in the event of a bare minimum federating at the outset, prohibition of discussion of the domestic affairs of States in the Federal Legislature, co-ordinate powers for the Upper House in voting supplies at joint sessions, freedom for States from direct taxation and inviolability of treaties. These conditions were considered essential, but entry into federation would depend on the final completed picture of the Indian constitution.

In the course of the proceedings of the Committee, the Princes' representatives declared that the States would not take more than a year after the Constitution Act and the Treaty of Accession had been finally formulated to come to a final decision on federation, provided the door was left open for federating at a later stage.

A certain amount of confusion was created by the claim made by Sir Manubhai Mehta, on behalf of the Chamber of Princes, for the right to accede if the Princes felt it necessary to do so after their experience over a period of time. He conceded the same right to Burma. Sir Akbar Hydari, however, opposed this. The proposal was stoutly opposed by the Secretary of State also. Sir Samuel Hoare said in the course of his evidence before the Committee that when the Crown placed the power acquired from the Indian States at the disposal of the

Federation for the functioning of the Federation, it became part of the Federation and the Crown could not return it to the States; nor could the States demand or resume it later on.

Yet another sensation was caused by the insistence of Mr. Churchill and his followers that the Princes were being jockeyed into accepting Federation so that the White Paper scheme could be pushed through. This, however, was unequivocally repudiated by the representatives of the Princes themselves and by the Secretary of State.

The Joint Parliamentary Committee having accepted Sir Samuel Hoare's suggestion that the new Government of India Bill should not confine itself to provincial autonomy but should include the establishment of a federation for all-India, the position of the States in the Federation naturally became an important consideration with the Princes. They appointed a committee of States Ministers to examine the report and formulate their views. This was done and a number of Princes, including the most prominent Rulers, met in Bombay in February, 1935, and expressed their disapproval of the Joint Parliamentary Committee's recommendations as they stood.

A resolution passed by the meeting of Princes emphasised that before the Bill could be considered as acceptable to the States it was necessary that it should be amended in certain essential particulars. These were set out in the report of the States Ministers' Committee and referred to the form and mode of accession to the Federation, specific mention and preservation of the treaties and agreements concluded with the States, the extent of the executive authority of the Federation in regard to the States, the special responsibilities of the Governor-General vis-a-vis the Indian States, provisions consequent upon the possible suspension of the constitution, and enforcement of Federation Laws and powers vested in the Governor-General.

The Princes objected to clause 2 of the Bill, which enabled the King to assign Paramountcy powers to anyone whatsoever, and to clause 6, whereby, according to the Princes, everything in the Act would become *ipso facto* binding upon the States. They wanted specific guarantees for the preservation of their treaties and agreements with the Crown. The idea was to make only such provisions of the Act as were specified in the Instrument of Accession made by individual States applicable to those States and to specify items with respect to which the Federal legislature might make laws for the State concerned. Similarly it was desired that the executive authority of the Federation should be subject to conditions that might be laid down and accepted under the Instruments of Accession. The clause empowering the Governor-General to assume the control of the administration in the event of an emergency, with a view to maintaining the tranquillity of the country was objected to on the ground that it might afford an excuse for the federal authority to interfere in the internal affairs of the State. In short, the States demanded that their powers should remain untouched in the event of the suspension of the constitution. They also

objected to the provisions vesting in the Governor-General the power to enforce federal laws and to give direction to States in respect of Federal subjects in regard to which they (the States) failed to maintain a system of administration adequate for the purposes of the Act. The Princes refused to accept the principle of setting off privileges and immunities against a share of taxes, etc., assigned to the federating States. They also protested against the implied subordination of State Railways to the Statutory Railway Authority.

The Princes' decision caused a great sensation and was promptly seized upon by the Conservative die-hards in Britain who saw in it a weapon with which they hoped to kill Federation. Mr. Churchill and his friends strove hard to make it appear that the Princes were unwilling to enter the proposed Federation. In reply to this, prominent States Ministers pointed out that their object was not to refuse to co-operate in the reformed constitution or to oppose the formation of the Federation, but to insist on certain changes in the Bill which they regarded as essential for the maintenance of the rights and privileges of the States.

Sir Samuel Hoare showed a conciliatory spirit and offered to consider the Princes' representations in respect of details. On the question of principle, however, he refused to bring into discussion the question of Paramountcy, which was definitely outside the purview of the Government of India Bill. He declared emphatically that, "though His Majesty's Government recognise the advantage of further clarifying the practice governing the exercise of Paramountcy, such issues cannot be determined by the consideration whether the States do or do not federate. Still less can a settlement of any outstanding claims of individual States be based on any such consideration."

On the question of specifying the subjects in respect of which the Princes were to federate, Sir Samuel Hoare said, "His Majesty's Government have never contemplated a Federation of India only as an association in which British India, on the one hand, and the Indian States, on the other, would do no more than act in concert on matters of common concern. From an early stage the discussions have centred on the creation of an organic union between the two, with the Federal executive and legislature exercising, on behalf of both, the powers vested in them for that purpose." At the end of an acrimonious debate in the House of Commons Sir Samuel Hoare said: "Firstly, the question of Paramountcy is one for consideration in India, and it is to a great extent distinct from the consideration of a federal constitution; secondly, we stand on the principle that the Crown's representative must retain ultimate discretion; Thirdly, we recognise there are matters which, by further discussion in India, may be adjusted, while in any case through federation the States will exchange the control of Paramountcy for a due share of constitutional control over a wide field of subjects.

"Three conclusions I draw from these considerations are:—One, the Bill, far from worsening the position of the Princes in regard to Paramountcy, will make it better. Two, the

greater part of the Bill has nothing to do with Paramountcy, which is not mentioned in the Bill. The greater part of the Bill has therefore to be decided on other considerations, and the introduction of Paramountcy into the controversy should in no way complicate or delay our proceeding steadily and normally with the Bill. Three, Paramountcy must be dealt with in a normal way in India. It affects all Princes whether they federate or not and whether the Bill is passed or not."

The Secretary of State's assurances allayed to some extent the fears of Indian Rulers. During the report stage of the Bill amendments were introduced by the Government which, it is believed, generally meet the issues raised by the Princes.

A notable contribution to the discussion about the position of the Princes in the future India was made by the Rt. Hon. V. S. Sastri in a series of public lectures delivered early in the year. His point was that the increasing emphasis laid by the Princes on the doctrine of the Paramountcy of the British Crown had assumed such magnitude that the entire basis of the fabric which British India and the Princes were hoping to realise had changed, and Federation as such threatened to swallow the Dominion Status for which they were till then striving. Under the present Government of India Act it was the Governor-General acting with his Council that looked after and maintained all the powers of Paramountcy under the Crown. But when the constitutional machinery of the Government of India was sought to be changed and substituted by Federation, the Princes claimed for the first time that the powers of Paramountcy should in the future Federal Government vest in the Viceroy alone, acting under the Crown, with certain modifications demanded by them. Mr. Sastri argued that so long as the doctrine of the separate individual allegiance of each Prince to the Crown and not to the Federal Government of the future exercising those powers under the Crown was maintained, the dominionhood of India would not be complete. Mr. Sastri called upon the Princes to make three declarations: that Dominion Status was the central goal of Indian political evolution; that the army should be completely Indianised within a stated period; and that the Princes would liberalise their administration, set up representative institutions, accept the principle of a privy purse and in other words make their subjects politically efficient.

Congress in 1935-36.

Persistent indecision characterised the affairs of the Congress in 1935-36. There were repeated demands from many sections among Congressmen themselves for a clear enunciation of policy. The country was kept in the dark about the Congress attitude towards the impending constitution, and whether, if Congressmen were returned in a majority in one or more provincial councils, they would accept responsibility for the administration. Similarly, Congress Hindus continued their agitation against the neither-accept-nor-reject attitude of the Congress towards the communal award. They had proved to the orthodox section

in power that Hindus were not in favour of the wavering attitude of the Congress on this question by successfully contesting the elections to the Assembly in November, 1934. They fought the Congress openly at these elections; but, having succeeded at the polls, they did not wish to continue to be rebels against the Congress, especially as some of the leaders of the dissentients were old and respected Congressmen. They therefore tried to secure a revision of the Congress resolution on the communal award.

The Congress party in the Legislative Assembly failed to implement its election promise—it could not get the House to pass resolution "rejecting" the new constitution; nothing was mentioned on the floor of the House about the constituent assembly; nor did it succeed in repealing any "repressive" measures.

But encouraged by certain successes which it scored, the party asked permission to extend its parliamentary activities. The resolution of the 1934 Bombay Congress session permitted only the contesting of the then imminent Assembly elections; it said nothing about the elections to the provincial councils under the new constitution. The Parliamentary Board wanted to reject the Government of India Act of 1935 not only by entering the new Councils but also by entering the Cabinet and from there forcing Government to abandon the scheme.

There is among Congressmen a section of opinion which has always been opposed to taking part in constitutional or parliamentary activities. Although they are unable to produce an alternative programme of political work—non-co-operation or civil disobedience, or any other form of direct action was unthinkable—they cannot bring themselves to support the proposal to carry the Council entry programme to its logical conclusion of accepting ministries if and where the party happens to be in a majority.

The controversy between these two sections continued for several months without the executive of the Congress, namely, the Working Committee, or the All-India Congress Committee, giving any definite lead in the matter. There were several meetings of the Working Committee and two meetings of the All-India Congress Committee, not one of which squarely faced the problem.

Procrastination marked some other activities of the Congress during the year 1935-36. There was repeated talk of concerted action on the part of Indian political parties, more especially Congressmen and Liberals, to resist the new constitution. The idea originated so far back as December, 1934, when the Liberal Federation, which met at Poona, adopted some strongly worded resolutions on the reform proposals. The president of the Liberal Federation for 1935 made an extensive tour of India in the course of which he had opportunity to consult political opinion throughout India. Bhabu Rajendra Prasad, too, toured the country from one end to the other. Few, perhaps, of the past Presidents of the two premier political organisations have travelled so widely or acquired so much first-hand

knowledge. Opinion in the country apparently favoured joint action by Congressmen and Liberals, but the leadership of both organisations seemed opposed to the idea, and the proposal was eventually dropped.

The year was also remarkable for the rapid growth of the Socialist Party in the Congress. They first measured swords with the orthodox section in an open session of the Congress in 1931 at Karachi. They repeated the attempt at Bombay. On both occasions they did not achieve much, but during the period 1934-36 they consolidated their position and scored at more than one provincial political conference. A source of encouragement to them was the choice of their doyen, Pandit Jawaharlal Nehru, as the President of the Congress for the current year. Although even in the latest session of the Congress at Lucknow their success, if any, was negative, they have undoubtedly become a force to be reckoned with. There are many who forecast that it will not be long before the Congress machinery passes into Socialist hands.

We now come to the Lucknow session of the Congress. The choice of the President against the convention if a man not presiding over a session in his own province can be explained only by the inscrutable workings of Mr. Gandhi's mind. Was it a desperate step calculated to abandon the Congress to the left wingers? Or was it done with the hope that the responsibility of office would curb the enthusiasm of Pandit Nehru and compel him to exercise a check on his over-vocal followers? Or, again, was it no more than an expression of the country's appreciation of the sacrifices which Pandit Nehru had made in the cause of political freedom?

Whatever the reasons, Pandit Nehru showed no desire for compromise. He was more than ever a Socialist and made no secret of his doctrines. His presidential address at Lucknow was a more outspoken utterance than the speech delivered by him as the President of the Lahore session seven years previously. It was an unequivocal condemnation of the parliamentary mentality of some Congressmen and an open appeal to the Congress to adopt the goal and methods of the Soviet with alterations to suit Indian conditions. He saw no remedy for India's ills except through socialism. He would destroy private property, expropriate vested interests without compensation, nationalise land and industries and secure the transfer of power from the present holders to the proletariat. To him India was part of a world movement against capitalism and imperialism. He was equally opposed to the Fascist idea which defies the middle classes. In short, he wanted the Congress to become a workers' and peasants' organisation, but—this is important and shows that the Pandit is not absolutely devoid of the sense of the practical—he announced that, in spite of his strong convictions, he had no desire to force his programme on an unwilling Congress.

A man holding such views could hardly be expected to countenance a proposal that Congressmen should accept office and run the administration under a constitution which he had denounced as calculated to consolidate the

hold of Imperialism on India. But he found that the majority of his colleagues and Congressmen generally were inclined to give a chance to those who advocated office acceptance as a means of wrecking the constitution from within, or at least preventing communalists and reactionaries from occupying places of power and influence. He bowed to the inevitable. In doing so, however, we revealed that he was in violent conflict with his co-workers but that he yielded to them in order to save the Congress from disintegration and the awkward situation that would arise from his resigning the presidency on the eve of, or in the midst of, the session.

If Pandit Nehru made an open exhibition of his clear cut views, Gandhian Congressmen too made no secret of their stout opposition to the Moscow cult preached by Pandit Nehru. Balu Rajendra Prasad created a stir by declaring that his knowledge of the Indian masses was derived from personal contact and life in their midst, not from books written by foreign authors and foreign conditions—a gibe at Pandit Nehru's doctrinaire philosophy. Thus the session progressed neither side appreciating the others viewpoint, but both intent on keeping the Congress machinery intact. Pandit Nehru agreed to postponement of a decision on the question of office acceptance.

The Socialists succeeded on one or more minor points, such as the abandonment of the manual labour franchise for Congress membership and other changes in the Congress constitution. They tried to secure for workers' and peasants' organisations direct representation on the Congress. In this, however, they failed and the whole subject of making the Congress more and more representative of the masses and responsive to their views and interests was referred to a Committee.

On the question of Congress attitude towards the new constitution, the following resolution was passed at Lucknow:—

"Whereas the Government of India Act, 1935, which is based on the White Paper and the Joint Parliamentary Report and which is in many respects even worse than the proposals contained in them, in no way represents the will of the nation, and is designed to facilitate and perpetuate the domination and exploitation of the people of India and is imposed on the country to the accompaniment of widespread repression and the suppression of civil liberties, the Congress reiterates its rejection of the new constitution in its entirety.

"The Congress, as representing the will of the Indian people for national freedom and a democratic state, declares that no constitution imposed by an outside authority and no constitution which curtails the sovereignty of the people of India and does not recognise their rights to shape and control fully their political and economic future can be accepted. In the opinion of the Congress such a constitution must be based on the independence of India as a nation and it can only be framed by a constituent assembly elected on adult franchise or a franchise which approximates to it as nearly as possible. The Congress, therefore, reiterates and stresses the demand for a constituent

assembly in the name of the Indian people and calls upon its representatives and members in the Legislatures and outside to work for the fulfilment of this demand.

"In view of the fact that elections for the Provincial Legislatures under the new Act may, according to official statements, take place before the next session of the Congress, this Congress resolves that, in such an event, candidates should be put forward on its behalf to contest such seats in accordance with the mandate of the Congress and in pursuance of its declared policy. Such candidates must be chosen from those who fully support the Congress objectives of Indian independence and pledge themselves to carry out its policy in regard to the Legislatures.

"The A. I. C. C. shall place before the country prior to the election a manifesto explaining the political and economic policy and programme of the Congress in conformity with the resolutions passed by it from time to time. The Provincial Congress Committees may further supplement the manifesto by adding thereto specific items which have a special application to their respective provinces. All provincial manifestoes must be approved by the Working Committee of the A. I. C. C.

"Resolved further that the functions of the Parliamentary Board be discharged in future by the Working Committee of the All-India Congress Committee. The Working Committee is authorised to appoint such boards or committees as may be necessary to organise elections to Legislatures as well as to guide, co-ordinate and control the activities of Congress members in the Legislatures. Accordingly, the Parliamentary Board need not be reconstituted hereafter.

"The question of acceptance or non-acceptance of offices by Congress members elected to the Legislatures under the new Constitution having been agitated in the country, the Congress, in view of the uncertainties of the situation as it may develop, considers it inadvisable

to commit itself to any decision at this stage on the question and leaves it to be decided at the proper time by the A. I. C. C. after consulting the Provincial Congress Committees."

Mr. Gandhi acted throughout as consultant-in-chief. He even attended the session, but as a visitor paying for his entrance. Although he did not take part in the proceedings, it was known that his personality influenced most of the decisions at Lucknow, and later at a meeting of the Working Committee held at Wardha when an open breach was averted through his good offices. It may be mentioned, as an illustration of the growing power of Socialists inside the Congress that for the first time in Congress history two advocates of Moscow philosophy were given seats on the executive of the Congress.

No review of the activities of the Congress in 1935-36 is complete without a reference to the celebration of its Golden Jubilee. The Congress to-day is not as it was a few decades ago; it has been transformed out of recognition. Its development has been such that several of the old-stagers had to leave it and form themselves into rival political organisations. Its creed has been changed and its method of work altered, but it remains to-day the most powerful political organisation in the land.

It was proposed by some former Congressmen that as far as the Jubilee celebrations were concerned the present managers of the Congress should so frame the programme as to make it possible for non-Congressmen and erstwhile Congressmen to participate in them. Those in charge of the machinery did respond to this request. This attitude, coupled with the fact that the session of the Liberal Federation was timed to meet at Nagpur about the same time, prevented several prominent ex-Congressmen from taking part in the principal celebration of the Jubilee, which was held in Bombay in December at the place where the first session of the Indian National Congress met in 1885.

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (*vide* 1919 edition of this book) witnessed the birth of the National Liberal Federation which has, since then, been the platform of Indian moderate leaders. It held its first session in Bombay in 1918, Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was set aside by the Nagpur Congress.

When the report of the Joint Parliamentary Committee was published at the end of 1934, the Liberal leaders pointed out that it not only retained all the objectionable features of the White Paper but was retrograde in respect of one or two essential factors of democratic government, such as the method of election to the Central Legislature.

Within a short time of the publication of the report, the Liberal Federation met at Poona under the presidency of Pandit Hridayanath Kunzru. In his address to the Federation he surveyed the entire political situation in the country and was very outspoken in his analysis of the Joint Parliamentary Committee's Report. He condemned it for its communal basis, for the place of eminence it assigned to the Services, for the introduction of indirect election to the Central Legislature, for the safeguards, for the proposal to establish second chambers in two additional provinces, and above all for the omission of any reference to Dominion Status as being the goal of India.

The session was remarkable for the show of defiance to authority staged by a small section of young Liberals who tended to move towards the left. Their manoeuvre failed, however, and

the session contented itself with passing a resolution of strong protest against the reforms proposals contained in the J. P. C. Report. Another notable feature of the proceedings at Poona was the outspoken speech delivered by the Rt. Hon. V. S. Sastri who said: "Liberals cannot give their active co-operation to a Government prepared to enact a constitution in defiance and disregard of our dearest wishes; that would be suicide." His speech caused a sensation at the time, inasmuch as he used language which is not ordinarily used by Liberals or by himself. For instance, he said that the safeguards in the J. P. C. Report amounted to blackmail. He warned Britain that "her trade would suffer if she persisted in thrusting on unwilling India the White Paper Reforms proposals." The lead given by Mr. Sastri was taken up by the Federation which passed the following resolution:—

"The National Liberal Federation of India records its profound regret at finding that the Joint Select Committee Report, instead of removing the glaring defects and short-comings of the White Paper proposals that were pointed out by the Federation at its two previous sessions, has, in utter disregard of almost the entire body of Indian opinion of all shades, including the British Indian delegation to the Joint Select Committee, introduced further highly objectionable and reactionary features, rendering responsible government in the Provinces and the Centre, which the British Government profess to give to India, wholly illusory. The Federation is convinced that any constitution based on the lines of the Joint Select Committee's report will be wholly unacceptable to all shades of Indian political opinion and will, far from allaying, very much intensify the present deep political discontent in the country. This Federation therefore does not want any legislation based upon the Joint Select Committee's report."

Their warning and advice produced no effect on the British Government, who went on with their plan to complete the scheme. The Liberals put up very few candidates for election to the Legislative Assembly and even those few suffered defeats, the only Liberal to be returned being Sir Cowasji Jehangir from Bombay.

The extremist tone of the proceedings of the Poona session of the Liberal Federation made the Liberals very popular among Congressmen, although the latter still continued to look upon the Liberals with a certain amount of political condescension. The outburst of protest with which the Liberals greeted the report of the Joint Parliamentary Committee on Indian Reforms, gave rise to the hope in some quarters that there might be a repetition of the united front which Indian political parties presented to the Simon Commission in 1927. Open suggestions were made by leaders of Congress and other schools of thought that the two should come closer together and explore the possibilities of united action. Both Babu Rajendra Prasad and Pandit Hridaynath Kunzru, the Presidents of the Congress and the Liberal Federation respectively, were undoubtedly anxious to evolve a formula whereby the two groups could take concerted measures to meet the new constitution.

The country was deeply interested in this move, which was widely discussed in the Indian press. The extreme left wing warned the Congress against having anything to do with the Liberals, while right wing Liberals opposed any joint action with the Congress. Eventually, however, the proposal fizzled out mainly owing to fundamental difference between the two in their goal and policy.

The position of the Liberal Party was clearly explained at the annual session of the Liberal Federation which met at Nagpur in December 1935. Mr. T. R. Venkatrama Sastri who presided said:—"We who claim to be progressive and nationalist should go in and work the new Government of India Act and, to the extent possible, keep out unprogressive elements from the Councils. Entering the Councils, are we too to wreck the Act by indiscriminate opposition? I do not expect any such programme to succeed. The unity required has yet to be created," he added, and when that unity is created, wrecking may not be necessary for securing changes in the constitution."

He entered upon an elaborate criticism of the Government of India Act of 1935, and said that "it had erected as far as the combined ingenuity of lawyers and Parliamentary draftsmen can erect them, barricades against full Dominion Status ever being attained." He continued: "If we do not work the Act, the Act does not thereby become inoperative. A considerable section of our countrymen can be got to work the Act. We are disorganised and disunited. We who claim to be progressive and nationalist should go in and work the Act, and, to the extent possible, keep out unprogressive elements from the Councils. The work within the Councils will quicken the work in the country. In power, we can do a great deal more than in opposition; contacts and associations will make smooth the path of work and achievement. In the provinces, a programme of wrecking is unwise and entry into Councils and acceptance of office should not be avoided. In the centre, there is little chance of a majority. All progressive parties should welcome opportunities of working in and out of Councils in collaboration with one another without in any way breaking with their other loyalties. A party programme should be drawn up without delay. In such a programme should be included relief to agriculturists, landless labourers and urban workers and the educated unemployed."

The session was remarkable for the element of realism imported into the proceedings as compared with the threats voiced at the previous session at Poona. The following resolution was passed at the Nagpur session:—

"(a) The National Liberal Federation of India, while reaffirming its resolution of last year, regrets that, in utter disregard of the almost unanimous Indian opinion, the British Parliament not only did not accept a single suggestion for improvement from India's point of view but imposed the Government of India Act 1935 on the country with further objectionable provisions added.

"(b) Yet, the National Liberal Federation considers that, in the circumstances of India, anything like a boycott of the new constitution is

futile and impossible and is therefore of the opinion that all nationalists of all parties and groups in the country should, in the supreme interests of India, act together in the general election which are to be held under the new Act, so as to extract from it whatever good it can yield, so as to accelerate the reform of the constitution on lines demanded by, and acceptable to, Indian opinion.

"(c) The Liberal Federation reiterates that no constitution can satisfy Indian opinion, which does not approximate as nearly as may be to the constitutions of the Dominions and concede to the people of India the full rights of national self-government with the irreducible minimum of reservations for a short period fixed by statute and which further does not make for national solidation."

It is not noteworthy that the Rt. Hon. V. S. Srinivasa Sastri, who was in recalcitrant mood at Poona, gave the Liberal delegates constructive advice at Nagpur. Referring to the apparent incongruity in parts (a) and (b) of the resolution he justified it by saying that the constitution was thrust upon them in a way they could not escape. If they did not work the reforms some one else would work them. However dark the

situation might be, it was necessary that they should come out of the wilderness and work the constitution. What they could do in ten years by accepting office they could not do in 100 years by remaining out of it. The Ministers must be men of clear vision and carry on their duties with honour and be prepared to resign office if retaining it involved betraying the interests of India. The constitution could be used to good purpose—the building up of a constitution more acceptable to the people.

Mr. Sastri advocated catching children young and imbuing them, in their education, with the ideas of brotherhood and nationalism. To no people who had known greatness once could it be denied altogether said Mr. Sastri. Despite the reference to joint action in conjunction with other political parties Liberal leaders lost no time in making it clear that they had no intention of abandoning their adherence to the goal of Dominion Status and their opposition to Congress widd fak. The door to co-operation between Congressmen and Liberals was finally closed by Pandit Jawaharlal Nehru, who was chosen to preside over the Lucknow session of the Indian Nationalist Congress. The Moscow doctrine which he preached in April, 1936, compelled Liberals to pursue their own course,

MUSLIM ORGANISATIONS.

The awakening of political consciousness among Muslims in India as a separate entity dates back to 1906 when the All-India Muslim League was formed. It worked up its influence steadily, so that when it was hardly ten years old it became sufficiently important to enter into an agreement—known since as the Lucknow Pact—with the powerful Indian National Congress. The League fell on evil days in the 'twenties, and differences set in among its members. When enhanced powers were conferred on India by the Montford Reforms, Muslims became more and more politically minded and began to aspire for a greater share in the control of the administration of the country and in Government posts. This feeling gave rise to the formation of a new body whose promoters concentrated on aggressive presentation of Muslim demands. With the prospect of still further constitutional reforms at the end of the first ten years of the working of the Montford Scheme, these leaders strove to organise Muslims into an influential body which would safeguard their interests more effectively than the League. The result was the All-Parties Muslim Conference in 1928. The publication of the Communal Award and its inclusion in the White Paper Scheme of Reforms in 1933 helped this process of consolidation. An attempt was made early in 1934 by the Aga Khan to consolidate the community by healing the split within the Muslim League and, if possible, bringing the League and the Conference together to work as a united body. His Highness succeeded in the former, but failed in the latter. Nevertheless, the spirit of unity that was engendered by the peace move persisted and, although the League and the Conference functioned separately, they worked with a commonness of purpose

which benefited the community as a whole and secured for it rights and privileges which unity alone could bring. This work was carried a step further in 1935-36 when complete unity of outlook characterised the activities of all Muslim organisations. As these lines go to press, the leaders of the community are striving to perfect the unification and organise the community all over the country so as to enable it to face the first elections under the provincial autonomy scheme.

The Muslim League.—The All-India Muslim League came into being in 1906 out of the universal desire among leading Mussalmans of that time for an effective organisation to protect their communal interests. With a view to secure separate Muslim representation in the legislative bodies of the land under the Minto-Morley scheme of constitutional reform then under discussion, Indian Moslems who had been hitherto keeping aloof from politics organised the League. Its original objects were the promotion of loyalty to British Government, the protection of political and other rights of Mussalmans and to place their needs and aspirations before Government in temperate language and to promote inter-communal unity without prejudice to the other objects of the League. Moslem opinions slowly advanced: and in 1913 the searing of self government within the British Empire was included in the objects. The League was a powerful and influential body in 1916 and 1917, and what is known as the Lucknow pact of communal representation arrived at between the League and the Congress in 1916 was bodily incorporated in the Government of India Act, 1919. The birth of the Khilafat Committee however overshadowed the League which from

1919 had almost disappeared till April 1924. In 1924, however, some influential Muslim leaders like Mr. M. A. Jinnah thought that the Khilafat Committee's functions having ceased in view of the Turkish deposition of the Khalifa decided to revive the League which met under Mr. Jinnah's chairmanship at Lahore in May 1924.

A schism set in with the announcement of the personnel of the Statutory Commission on Indian Reforms. The non-inclusion of Indians on the Commission was construed by a certain section of the Muslims as an insult to India; and those who held this view decided to boycott the Commission. The majority of the community, however, thought otherwise. The League's domestic quarrels were, however, settled early in 1934 and it has since been functioning with vigour under the leadership of Mr. Jinnah.

The publication of the Nehru Report hastened the advent of the All-Parties Muslim Conference. The Conference was called in 1928 to counteract the effect of the Nehru Report and to formulate the Muslim community's demand in regard to the future constitution of India. With the rehabilitation of the League early in 1934, the Conference naturally suffered somewhat in influence. The present position of the Conference is that it represents extremist Muslim opinion, while the League stands for conciliation with Hindus and, politically, holds more advanced views.

Muslim Activities in 1933-36.—The publication of the White Paper set the various Muslim organisations busy. The executive board of the All-India Muslim Conference met together and asked for the largest measure of fiscal, administrative and legislative autonomy for the provinces, demanded the curtailment or the Governor's powers and urged statutory safeguards for the protection of the personal law, education and culture of Muslims. Similarly, the League session at Calcutta expressed dissatisfaction with such of the provisions of the Communal Award and the White Paper as fell short of the Muslim demands in respect of their representation in the legislatures. The Delhi Session of the League wanted the Governors' powers to be clearly defined in the constitution and opposed all efforts to change the Communal Award.

The publication of the report of the Joint Parliamentary Committee towards the end of 1934 caused an outburst of opposition in the country and most leaders showed a tendency to join others in condemning the Committee's findings; but Muslims as a rule rested content with criticism and did not go to the length of urging the rejection of the new scheme. Except for a small group of Nationalist Muslims in the Congress, the community as a whole expressed its readiness to work the new constitution despite its defects.

The Muslim League, too, condemned the J. P. C. Report as more reactionary than the White Paper, but decided to accept the Award "so far as it goes, until a substitute is agreed upon by the various communities concerned." On that basis it declared its readiness to

co-operate with any other party "with a view to securing such a future constitution for India as would satisfy the people".

There was a fall in the political activities of Muslims until late in 1935. During the Budget session of the Legislative Assembly, Babu Rajendra Prasad, the President of the Congress, held prolonged consultations with Mr. Jinnah with a view to arriving at an agreed formula to replace the Award. The Muslim spokesman was ready to explore avenues of inter-communal concord but refused to consider any proposal which sought to take away from the community what it had been given under the Award. The Congress leader on his part was willing to make any sacrifice to the minority community provided "the anti-national separate electorates" were substituted by joint electorates. After about a fortnight's negotiation they evolved a formula whereby Muslims retained the rights given to them under the Award, but agreed to substitute separate by joint electorate on the understanding that a franchise different to that governing the Hindus was made applicable to Muslims so as to bring the latter's voting strength in proportion to their population ratio. This formula did not prove acceptable to Bengal and Punjab Hindus who opposed the differential franchise and also objected to Muslims becoming a statutory majority in those two Provinces. Thus the peace parleys broke down and the two communities continued to drift apart.

Recently the Muslim League has again been concentrating its attention in efforts to consolidate the position of the Muslim community. Unlike the Congress, the Hindu Mahasabha and allied organisations the Muslim organisation and leaders maintained discreet silence on public questions. The only exception to this was their advocacy of the rights of the Muslims to what is held to be a mosque in the compound of a Sikh shrine in Lahore, which was demolished in the course of one night and on which prolonged communal warfare was waged between the Sikhs and the Muslims of the Punjab resulting in serious damage to life and property. The Muslim Silence was obviously due to their desire to tackle their problems in a realistic manner.

The speech of the President to, and the resolutions adopted by, the 1936 session of the All-India Muslim League which met in Bombay indicate the attitude of the community towards political questions. Saïyed Sir Wazir Hassan, who presided, complained about the defects of the constitution of 1935, but declared himself against any proposal to wreck it, if by wrecking was meant the creation of deadlocks in the legislatures. The League unanimously passed the following resolution:—"Whereas the Parliamentary system of Government which is being introduced in this country with the inauguration of the new constitution presupposes the formation of parties with a well defined policy and programme which facilitate the education of the electorate and co-operation between groups with approximate aims and ideals and ensures the working of the constitution to the best advantage; and whereas in order to strengthen the solidarity of the Muslim community and to secure for the Muslims their proper and effective

share in the provincial governments, it is essential that the Muslims should organise themselves as one party, with an advanced and progressive programme; it is hereby resolved that the All-India Muslim League do take steps to contest the approaching provincial elections, and for this purpose appoint Mr. Jinnah to form a central election board under his presidency, consisting of not less than 35 members, with powers to constitute and affiliate provincial election boards in various provinces, having regard to the condition of each province, and devise ways and means for carrying out the aforesaid objects."

While agreeing to work the provincial schemes under the new constitution for what it is worth, despite its objectionable features, the League criticised the federal scheme incorporated in the Government of India Act of 1935 as "most reactionary, retrograde, injurious and fatal to the interests of India."

The following is the text of the resolution criticising the Act which was moved by Mr. Jinnah the permanent President of the League:—

"The All India Muslim League enters its emphatic protest against forcing the constitution, as embodied in the Government of India Act of 1935, upon the people of India, against their will and in spite of their repeated disapproval and dissent, expressed by various parties and bodies in the country.

"The League considers that, having regard to the conditions prevailing at present in the country, the provincial scheme of the constitution be utilised for what it is worth in spite of the most objectionable features contained therein, which render the real control and

responsibility of the Ministry and the Legislature over the entire field of Government and the Administration nugatory.

"The League is clearly of the opinion that the All-India federal scheme of the Central Government, embodied in the Government of India Act of 1935, is fundamentally bad; it is most reactionary, retrograde, injurious and fatal to the vital interests of British India *vis-à-vis* the Indian States, and it is calculated to thwart and delay indefinitely the realisation of India's most cherished goal of complete responsible government and is totally unacceptable.

"The League considers that the British Parliament should still take the earliest opportunity to review the whole situation afresh—regarding the Central scheme before it is inaugurated; or else the League feels convinced that the present scheme will not bring peace and contentment to the people, but on the contrary it will lead to disaster if forced upon and persisted in, as it is entirely unworkable in the interests of India and her people."

Another feature of the activities of the Muslim leaders during 1935-36 was their desire to secure the betterment of the condition of the masses. The lead in this matter was given by H. M. the Aga Khan, who pleaded for a sustained economic programme for the uplift of the large body of Muslims. With this economic programme on their lips, the Muslim leaders, at the time of writing, are busily engaged in educating Muslim electorates and perfecting local communal organizations so that the policy and programme of the Muslims in regard to the coming provincial governments could be pursued with a singleness of purpose all over the country.

Government of India Act, 1935.

The seeds of the Government of India Act, which was placed on the Statute Book in 1935, were sown as far back as the autumn of 1930 when the Indian Round Table Conference met in London for the first time. Three sessions of the conference were held, and it concluded on December 24, 1932. Some months later the British Government published their proposals for the reform of the Indian constitution based on the largest measure of agreement reached at the three sessions of the Round Table Conference. These proposals were embodied in a White Paper (March 1933) which was referred to a Committee of the two Houses of Parliament. The Committee submitted its report in October 1934. Based on the recommendations of this Committee, the Government of India Bill was presented to Parliament in October, 1935. The Bill has since become law with a few changes in its passage through Parliament.

The Act proposes to set up a Federation with responsibility at the Centre, and to provide for provincial autonomy as a preliminary step.

The Federation which the Act provides differs from those in other parts of the world because its units are not homogeneous. The Indian

States differ widely from the British India Provinces. These complications react upon the constitution. As Sir Samuel Hoare said in the House of Commons "they react, for instance, upon the provisions as to how the federation is to be formed, for it is obvious that the Princes, being voluntary agents, can only enter of their own volition. They react again upon the kind of executive and the kind of legislature that is proposed, each side of the federation obviously demanding adequate representation both in the government and in the federal legislature. They react again upon the relations between the two Federal Chambers, the Princes from the first attaching the greatest possible importance to the Chambers having equal powers. They react, further, upon the list of federal subjects, the Princes again rightly insisting that, apart from the functions of Government which they surrender to the Federation, there should be no interference in their internal sovereignty. These complications make a formidable list of difficulties."

The Act sets up a Federal Executive similar to the responsible executives in other federations of the Empire. The whole executive power of the Federation is conferred on the Governor-

General, and his Ministers are appointed to "aid and advise" him and hold office during his pleasure. The Ministry shall consist of persons in whom the Legislature has confidence and the Governor-General shall dismiss them when they lose that confidence.

In contrast, however, with Dominion Constitutions, the Governor-General of India is given special powers by the Act. In the first place, the Departments of Foreign Affairs, Ecclesiastical Affairs and Defence are "reserved" and will be administered by him through the agency of counsellors; in the second place, in all other departments he may act in certain cases and for certain purposes otherwise than on his ministers' advice.

The Act imposes upon him special responsibilities for:

- (a) The prevention of any grave menace to the peace or tranquillity of India or any part thereof.
- (b) The safeguarding of the financial stability and credit of the Federal Government.
- (c) The safeguarding of the legitimate interests of the minorities.
- (d) The securing to, and to the dependents of, persons who are or have been members of the public services of any rights provided or preserved for them by or under the Act and the safeguarding of their legitimate interests.
- (e) The prevention of discrimination.
- (f) The prevention of action which would subject goods of United Kingdom or Burmese origin imported into India to discriminatory or penal treatment.
- (g) The protection of the rights of any Indian State and the rights and dignity of the rulers thereof.
- (h) The securing that the due discharge of his functions with respect to matters with respect to which he is by, or under, the Act required to act in his discretion, or to exercise his individual judgment, is not prejudiced or impeded by any course of action taken with respect to any other matter.

The Federal Legislature will consist of two chambers: the Council of State and the Federal Assembly. The Council of State will consist of not more than 104 representatives of the federating Indian States and of 156 representatives of British India elected by the people, of whom six will be chosen by the Governor-General in his discretion. The Council of State is to be a permanent body with a provision that a third of its members should retire every third year. The representatives of British India are to be chosen on a communal basis, while those of the States will be appointed by the Rulers of the States concerned in accordance with the relative rank and importance of the State. (*See table at the end of this chapter for the composition of the British Indian half of the Council of State.*)

The Federal Assembly will consist of not more than 125 representatives of the federating Indian States and of 250 representatives of British

India mostly elected by the Provincial Legislatures—by the lower House of the Provincial Legislatures wherever there are two Houses.

The Federal Assembly is to continue for five years from the date appointed for their first meeting after the expiration of which it will be dissolved. The distribution of seats here will also be on a communal basis. Thus, the Hindu, Muslim and Sikh seats will be filled by the representatives of those communities in the Provincial Assemblies voting separately for a prescribed number of communal seats. Depressed Classes will have representation from among the Hindu seats. Besides these three main groups, Europeans, Anglo-Indians, Indian Christians, representatives of commerce and industry, landholders, representatives of labour and women will have seats. (*See table at the end of this chapter for the composition of the British Indian half of the Federal Assembly.*)

An "annual financial statement" setting out the estimated receipts and expenditure of the Federation in respect of every financial year will be laid before both Chambers of the Federal Legislature. The estimates of expenditure will show separately the sums required to meet expenditure charged upon the revenues of the Federation; and the sums required to meet other expenditure proposed to be made from the revenues of the Federation. Items falling under the former category will not be submitted to the vote of the Legislature. With a view to the observance of the well-recognised principle of public finance that no proposal for the imposition of taxation or for the appropriation of public revenues should be made otherwise than on the responsibility of the Executive, it is provided in the Act that no demand for a grant is to be made unless recommended by the Governor-General.

The Federal Legislature alone may make laws upon any federal subject and the Provincial Legislature alone may make laws upon any subject treated as "concurrent"; but in case of conflict Federal legislation shall prevail unless the provincial law has been reserved for the consideration of the Governor-General and has received his assent.

The foregoing is a description of the framework of the India Federation. When half of the Indian States, on the basis of population and of representation in the Upper Federal Chamber, have acceded and after both Houses of Parliament have presented an address to His Majesty praying that the Federation may be brought into existence, a Royal Proclamation will give legal effect to the federation of India.

The creation of a number of autonomous administrative units including two new ones, namely, Sind and Orissa, some of which have in recent years found it very difficult to make both ends meet, and the need for a strong Central Government presented some very difficult financial problems for the framers of the constitution. The allocation of sources of taxation and the settlement of heads of expenditure and debts, not only to enable the provinces progressively to develop but also to provide the Central Government with adequate funds to discharge its All-India responsibilities was the

main problem. To secure a satisfactory solution of this problem the expert advice of Sir Otto Niemeyer was sought. His recommendations are summarised elsewhere in this volume. (See page 671.)

The Government of India Act also establishes a Statutory Railway authority which will take over the executive authority of the Federation in respect of the regulation, construction, maintenance and operation of railways coming under the jurisdiction of the Federal Government. The powers which the Governor-General possesses of taking action in virtue of special responsibilities and in respect of the reserved subjects extend to the giving of directions to the Railway authority.

Under the Act a Federal Court is to be established which will consist of a Chief Justice of India and such number of other Judges as His Majesty may deem necessary. The Federal Court will ordinarily sit in Delhi. It will have an original jurisdiction and an appellate jurisdiction, in the latter in appeals from High Courts in British India and in Federated States. Its original jurisdiction will extend to any dispute between any two or more of the following, namely, the Federation, any of the Provinces and any of the Federated States. Provision is also made for an appeal to the Judicial Committee of the Privy Council from a decision of the Federal Court.

The Act abolishes the Council of the Secretary of State for India and makes him a Minister of the Crown individually responsible for the exercise of all authority vested in the Crown in relation to the affairs of India. He will, however, continue to be a member of the Cabinet and of Parliament, to which bodies he will be responsible for his actions.

Provincial Constitutions.

It may take two or three years before the federal part of the constitution is ready to function. In the meantime Provincial Autonomy will be set up. Under the Act there will be eleven Governor's provinces, namely Madras, Bombay, Bengal, the United Provinces, the Punjab, Bihar, the Central Provinces and Berar, Assam, the N. W. F. Province, Orissa and Sind, with power to the Crown by Order-in-Council to create, if deemed necessary, a new Province, increase or diminish the area of any province or alter the boundaries of any Province. The Provincial Executive will be similar to that of the Federation in form.

In addition to the Governors' Provinces there will be the following Chief Commissioners' provinces: British Baluchistan, Delhi, Ajmer-Merwara, Coorg, the Andaman and Nicobar Islands, the area known as Panth Piplida and such other Chief Commissioners' Provinces as may be created under the Act which will be administered by the Governor-General acting through a Chief Commissioner to be appointed by him.

The Provinces of Madras, Bombay, Bengal, the United Provinces, Bihar and Assam will have two Chambers, Upper and Lower, namely, the Legislative Council and the Legislative

Assembly, while the others will have only one Chamber, the Legislative Assembly. Representation in the Legislative Assembly will be by separate electorates for each community based on the provisions of the Communal Award as modified by the Poona Pact of September 25, 1932, under which a number of seats out of the seats classified as general seats will be reserved to the Depressed Classes. The life of the Provincial Legislatures will be the same as that of the Federal.

In provinces with bi-cameral legislatures the Upper House will see that the Lower House does not indulge in hasty and ill-conceived legislation due to the temporary majority of any party. But the deliberations of the Upper House will also be subject to examination by the Lower House.

While there will be no nominated members and no officials in the Assembly—all members of the Lower House will be elected—the Governor will have the right to fill some seats in the Provincial Council whenever one exists. (See tables at the end of this Chapter for the composition of the Provincial Councils and Provincial Assemblies.)

The constitution sets out the qualifications of electors. There are certain provisions of a general nature applicable to all Provinces while particular Provinces are dealt with separately, as in some cases the payment of local taxation, in other cases payment of local taxation, in other cases payment of land revenue is the main qualification. The new constitution has extended the existing franchise so as to enfranchise about 10 per cent. of the total population of British India. The Acts of 1915 and 1919 provided for an electorate of approximately 3 per cent. of the total population, the franchise based mainly on a property qualification. Under the reformed constitution women have a much wider franchise, over 6,000,000 female electorates as compared with 315,000 provided by the acts of 1915 and 1919. The Act of 1935 secures representation for women, for the Depressed Classes, for industrial labour and for special interests and for the bulk of the small landholders, small cultivators, urban ratepayers as well as a substantial section of the poorer classes.

At present the Provinces have no original or independent powers. The local Governments are under the superintendence, direction and control of the Governor-General-in-Council and the Secretary of State for India. The first step which the new constitution proposes to take is to create provinces with independence of their own and to assign to them a certain exclusive share of the activities of Government. There will be a transfer of all subjects to the control of the legislature. The subjects which are classified as provincial will, as indicated above, be exclusively dealt with by the Provincial Government which will have power to make laws for peace and good government. There will be no more "reserved" subjects. All subjects will be "transferred." The administration of all these subjects will pass from the bureaucracy to the control of Ministers responsible to the legislature. Such subjects will include public order, courts, police, prisons, education,

health and sanitation, public works, agriculture, forests, land revenue, excise, tolls, unemployment and certain classes of taxation.

Generally the Ministers will be entrusted with the administration of their own departments. Under the existing constitution they are merely advisers of the Governor. Under the new constitution they will be effective executives. Only in those spheres where the Governor will retain a special responsibility will he have the right to act independently of the Ministers should he differ from their views. But normally such occasions should not be very frequent.

Both the Upper and Lower Houses will have power to initiate legislation except that Money Bills will be initiated in the Lower House only. Should there be a difference of opinion between the two Houses with regard to a Bill the Governor will be empowered to convene a joint session of the two Houses. Any Bill affirmed by the majority in the joint session shall be taken to have been duly passed.

Under the new Constitution the Governor will have almost the same special responsibilities as the Governor-General except the one relating to financial stability and credit. The Governor has, notwithstanding the advice of his Ministers, power to take whatever action he thinks necessary for the due discharge of his responsibility for preserving the peace or tranquillity of the Provinces. The grant of these powers will ensure a smooth working of the constitution and prevent a breakdown.

Indeed, the proposed constitution will enable India to achieve considerable political power. Everything depends on whether it is worked in a spirit of co-operation, sincerity and unity or in a spirit of irresponsibility or communal bias. In the former event, India's advance along the path of responsible Government is assured; in the latter, the Governor's or Governor-General's special powers will be more than justified.

In the Punjab one of the Landholders' seats is to be a seat to be filled by a Tumandar.

In Assam and Orissa the seats reserved for women are to be non-communal seats.

The Indian Legislature.

The annual Budget session of the Indian Legislature commenced with the first meeting of the Legislative Assembly on 21 January. Proceedings began with a motion for adjournment, moved by the Congress party as a means of censoring the Government of India over a confidential circular issued by the Home Government in connection with decisions of the recent meeting of the Indian National Congress party in Bombay. The main point of this circular was that in the opinion of the Home Department Mr. Gandhi's scheme for the establishment of an All-India Village Industries Association was probably part of a plan for increasing Congress influence in the rural villages, with a view to later utilizing the rural population for a renewed revolutionary campaign, and that the development of the Association's activities, after they were started should carefully be watched. A critical feature of the debate was the insistence of Congress party members of the House upon the legitimacy of Congress thus mixing politics and economics. The motion was talked out.

This being a new Assembly following a general election, the election of the President was taken up in the early stages of the Session. The choice of the House at its meeting on 24th January was Sir Abdur Rahim, and his election received the necessary approval of His Excellency the Viceroy within an hour of being made. The same afternoon His Excellency addressed the House.

The Viceroy, having congratulated the new President on his election and welcomed the newly elected Members of the House, referred to the forthcoming celebrations of His Majesty's Silver Jubilee, and briefly described the measures taken for the protection of Indian interests in Zanzibar. His Excellency next announced the decision of Government to revive the Central Advisory Board of Education. He then emphasised the improvements of the newly established Marketing Board established under the Imperial Council of Agricultural Research and referred to several activities undertaken by the Council for the assistance of agriculture in different parts of India. Lord Willingdon spoke with satisfaction of the development of the Indian Air services and of the useful work being performed by the Indian Roads Congress, a body comprising engineers from all Indian provinces and several important States and specifically concerned in problems connected with road making.

His Excellency in referring to forthcoming legislation specially mentioned Bills arising out of the Royal Commission on Labour in India. The Viceroy dwelt at some length upon economic questions. He spoke of the economic depression still affecting India and of the measure taken by Government to meet the problem which arose and specially directed attention to the Supplementary Agreement signed on 9 January 1935 to supplement the Trade Agreement between India and the United Kingdom, which followed the Imperial Economic Con-

ference at Ottawa in 1932. The new Agreement was laid on the table of the Assembly on the morning of the day of His Excellency's address and the Viceroy declared, "It is the hope of my Government that the clear and unequivocal statement of their tariff policy contained in the new Agreement will remove any lingering doubts or suspicions and help to inaugurate an era of good-will and friendliness with profound benefit to the trade and political relations of Great Britain and India."

His Excellency finally dwelt upon the new scheme of Constitutional reform. He begged Hon. Members to lay aside the arguments and discussions of recent years, the evidence and the memoranda, the documents and the reports and all the literature of the reforms and then to centre their thoughts on the great principles which had increasingly asserted themselves until they dominated the new scheme. "They are the foundations on which the scheme is built. Provincial Autonomy in British India and a Federation comprising the whole Continent."

His Excellency added: "Look back over India's history to the time before the British connection established itself. This dream of a Dominion extending its authority from one end of the Continent to the other from age to age seized the mind and gripped the imagination of the great rulers of the past. We, the British in India, have brought peace and ordered government over a long period of years. Under our hand, the political life of the country has grown and expanded. New ideas of public and personal liberty have been encouraged and have taken root. But in a Federation of all India I see the coping stone of British achievement." Let us, said His Excellency, as practical men recognize that in such a large and general question as the new Constitution differences of opinion must exist. His Excellency referred to some of the criticisms which had been raised in different quarters and went on: "But I am satisfied that the scheme gives to India the opportunity, to which she so earnestly aspires, to mould her future nearer to her heart's desire.....Let Indian leaders work to secure changes or improvements on points to which they attach importance. But I counsel them in all earnestness to take the scheme as the only path likely in any period of time that we can yet foresee to bring within their reach the great idea of an All-India Federation, my faith in which I have just expressed.....I am convinced that the path that leads to Federation is the path that leads to India's sure advance. The constitutional scheme that takes India on that road is a scheme well worth the exercise of her best exertions."

The Member for Commerce and Railways, the Honourable Sir Joseph Blore, on 29 January moved a formal resolution to facilitate a discussion of the recently signed Indo-British Trade Agreement. He pointed out that the Agreement attempted to do little more than to formulate, in more or less precise terms, the principles which

have guided Indian fiscal and tariff policy and practice since the resolution passed on the subject by the Assembly in 1923, when it endorsed the policy of discriminating protection. "Analysed briefly, its terms amount to this. His Majesty's Government for their part recognise that the economic well-being of this country may demand the application of a policy of discriminating protection, that, in pursuance of that policy and in the cases in which it is applied, the Indian industry is entitled to adequate protection against all its outside rivals and competitors, whosever they may be, and that the revenue needs of this country must normally dictate the level of those duties which are not fixed upon a protective basis. The Government of India for their part have enunciated in this Agreement the principles which govern their existing policy of protection and its application in practice."

Sir Joseph went on to show that the Government of India in the first place agreed to continue their adherence to the policy of discriminating protection and in the second place undertook to apply that policy in the manner in which they had applied hitherto. "We have done nothing more than to crystallise our past fiscal practice and the principles which have been accepted either directly or indirectly by this Legislature."

The Member of the Independent Party, moved an amendment declaring the House to be "of the opinion that inasmuch as the said Agreement is unfair to India, the Government of India should terminate it forthwith." He declared that the Agreement was one-sided, giving away everything and getting absolutely nothing. Let there be by all means be a commercial treaty with the United Kingdom but it should be a treaty in which, in return for a certain amount of give, there is a certain amount of take."

Another non-official Member, a representative of Indian Commerce in Bengal, moved for the circulation of the Treaty to all Chambers of Commerce and that consideration by the House be postponed until their views were received. He criticised various provisions of the Agreement and contended that if the Government of India had consulted Indian commercial bodies before signing it they would have been more successful in their negotiations. The Bengali non-official member objected to the Agreement on the ground that in it "We find that the principal and policy of Imperial preference have been accepted in their entirety," an opinion from which the Commerce Member immediately indicated his emphatic dissent. He objected to British Industries being given an opportunity to make representations to a tariff board when it was examining the claims of an Indian industry for protection, as British industries could do in similar cases in Canada and Australia.

Mr. Ramsay Scott, spokesman for Indian Commerce in the United Provinces, supported the new Agreement. Another Bengal Member condemned it for several reasons already set out by the President of the Bengal National Chamber of Commerce. Mr. P. E. James, speaking for the non-official European Group, replied to a large number of criticisms offered and strongly supported the Agreement. Sir. H. P.

Mody, representative of the Indian Millowners' Association, regretted the suspicion and prejudice which charged the atmosphere of this debate on a matter of agreements. He accused Government of at least partial responsibility in the creation of that atmosphere. He profoundly disagreed with the stand-point of Members who so long as Indian political demands were not satisfied refused to have anything to do with either Great Britain or other British interests and he stoutly supported the Treaty as a whole and in detail. He was constantly heckled and the interruptions frequently showed considerable ignorance about the details of the Treaty and their implications. Mr. M. A. Jinnah, Pandit Govind Ballabh Pant and other members spoke against the Treaty. Sir Cowasji Jehangir joined the critics. Mr. Bhulabhai J. Desai, winding up a two days debate for the Opposition, said that by the Agreement India was called upon to legalise and regularise the high-handedness and one-sidedness on the part of those who wielded executive and political power to her own detriment. The Commerce Member, Sir Joseph Blore, replying to the debate for Government, repudiated what he described as two amazing and grotesque allegations, that the Fiscal Autonomy Convention had been thrown to the winds and that hereafter it would be impossible for India to protect her industries against the competition of the United Kingdom. In the end, the amendment demanding the termination of the agreement forthwith was carried by 66 votes to 58.

The Law Member of Government as Leader of the House, the Honourable Sir Nripendra Sircar, on 4th February moved a formal resolution to facilitate discussion of the report of the Parliamentary Joint Select Committee on Indian constitutional reforms. Mr. Bhulabhai J. Desai, leader of the Congress party in the House, moved an expression of the Assembly's opinion "that the proposed scheme of Constitution for the Government of India is conceived in a spirit of Imperialist domination and economic exploitation and transfers no real power to the people of India and that the acceptance of such a Constitution will retard instead of furthering the political and economic progress of India and recommends to the Governor General in Council to advise His Majesty's Government not to proceed with any legislation based on the said scheme. As regards the 'Communal Award' this Assembly deems it most conducive to national harmony and to a solution by mutual agreement of the problems involved that it should refrain from expressing any opinion at the present juncture either accepting or rejecting the 'Communal Award.' There were several other amendments and among them one was moved by Mr. M. A. Jinnah, asserting that the House accepted the Communal Award "so far as it goes, until a substitute is agreed upon by the various communities concerned," but declared the scheme of Provincial Governments to be "most unsatisfactory and disappointing" and unlikely to satisfy any section of Indian opinion unless certain "objectionable features are removed," and with regard to the scheme of the central Federal Government pledged the House to the opinion that "it is fundamentally bad and totally unacceptable to the people of British India," and urged that

steps should immediately be taken for consultation between His Majesty's Government and Indian opinion with a view to the establishment in British India alone of "a real and complete Responsible Government."

The total number of amendments which were moved filled six pages of small print in the official proceedings of the House. The prime feature of the debate was a contest between the Congress representatives, with their amendment declining to express any opinion upon the Communal Award, and the general body of Muhammadans, with their amendment expressing approval of it. For the rest, the debate largely consisted on the one hand of protests against "the safeguards" proposed to be included in the new constitution, and on the other of such a plethora of arguments insisting upon communal viewpoints, and protection for them as in effect amounted to a strong demand for more safeguards than the Joint Select Committee's report proposed. The speeches lasted for four days, and in the end the amendments were voted upon in sections and though amendments hostile to the report were carried the division list emphasised the mixed and often contradictory motives with which members voted for one and another section of the whole amendment.

The first part of Mr. Bhulabhai's amendment condemning the whole constitutional scheme was rejected by 72 votes to 61. Mr. Bhulabhai's amendment refusing to express an opinion upon the Communal Award was rejected by 84 votes to 44, and Mr. Jinnah's amendment accepting the Award was adopted by 68 votes to 15, the Congress party and their nearest political friends abstaining from voting. The House then adopted by 74 votes to 58 the second part of Mr. Jinnah's amendment concerning the proposed Provincial and Central Governments. The Congress party and their immediate friends voted for Mr. Jinnah.

A highly interesting expression of opinions by different sections of the Assembly on general problems of taxation was obtained on a non-official motion moved by Dr. Zia-ud-Din Ahmad, running "that this Assembly recommends to the Governor General in Council to take immediate steps for revising their present taxation policy." Dr. Zia-ud-Din Ahmad began by declaring export duties all to be unhealthy and some to be vicious. He argued on financial grounds that the income-tax was too high. He protested against what he called the heavy postal charges. Turning next to import duties, he said: "Two years I was protectionist but the manner in which we did apply this protection duty in 1934 has made me mad, so much so that I have now given up all belief in the protection theory and think that the whole thing requires a good deal of revision." The debate spread over two days, and during that time industrial protectionists and representatives of agrarian and other sections gave full vent to an interesting collection of opinion. The speeches did not follow the ordinary party lines. Several amendments were moved and adopted and in the end the resolution as amended was accepted in the following terms. "That this Assembly recommends to the Governor General in Council to take immediate steps for revising

their present taxation policy, with a view to so redistribute the incidence of taxation as to lower its burden upon the poorer classes of this country, particularly with respect to the assessment of income-tax on incomes below Rs. 2,000 and the excise duties on matches and sugar, and with a view to assess land revenue in the Centrally administered areas on the basis of income-tax."

Railway Budget.

The Honourable the Railway Member, Sir Joseph Bhore, presented on 18th February the annual Railway budget. He was able to show that the course of events in the past year had fortunately borne out the belief he expressed when presenting his Budget for 1934-35, that the improvement which had begun to manifest itself in traffic in 1933-34 indicated that the railways were fairly on the road to recovery and that it would be continued. The actual deficit for 1933-34 was shown to be just under 8 crores. The budget estimate for 1934-35 provided for a deficit of 5½ crores (including the loss on strategic lines which amounts to approximately 2 crores). The revised estimate for the same period reduced the figure from 5½ crores to 4½ crores. The loss on the commercial lines now being placed at about 3½ crores. The deficit, as in previous years, would be met by a temporary loan from the depreciation fund. The actual balance in the fund at the end of the financial year would thus be 11 crores as against 9½ crores at the beginning of the year. Sir Joseph's estimates for the year 1935-36 provided for traffic receipts on State lines amounting to 93½ crores, against 90½ crores in 1934-35, and for a final deficit of 100 lakhs, after providing for a deficit of 197 lakhs on strategic lines. Sir Joseph said that "the steady almost continuous improvement shown this year in our goods traffic and the increase in the passenger traffic, though not in earnings, can in our opinion be taken as definite indications of a regular upward trend, which may be expected to continue. . . . All signs at present point to a future which is likely to be sustained, if not spectacular. We feel we are justified in giving practical expression to this conclusion by a reduction in certain freight rates and it is this feeling of confidence in the future which has led to the decision announced a few days ago of a reduction in the surcharge on coal freights."

Sir Joseph, speaking of the Convention under which the method of calculating the contribution to be paid from railway profits to the general exchequer is prescribed, specially referred to the contributions paid to the Railway Depreciation Fund and to the criticisms to which Government were subjected on that account and said, "I regret to say that we have not been able to arrive at final conclusions on the wide and complicated question of what should be the theoretically proper allocation of works expenditure between capital and revenue, but pending such a decision we have decided after consultation with the Auditor General and with the concurrence of the Standing Finance Committee for railways and the Public Accounts Committee, and with the approval of the Secretary of State to simplify our calculations for the depreciation fund by taking the amount to be put by for depreciation

as a definite fraction, viz., 1/100th of the total capital at charge. As a result, during 1935-36 the amount that we have to set aside for depreciation will be 13½ crores, about 45 lakhs less than during the current year." The apparent return of prosperity Sir Joseph regarded as justifying an increase of works expenditure in 1935-36. He expressed a high opinion of the essential strength and soundness of the financial position of Indian railway notwithstanding the successive deficits since 1930-31, and he concluded with a warm tribute to the Chief Commissioner and with an exhortation to the several railway administrations to maintain and improve the efficiency of the different lines.

The debates which followed took the customary lines of comment and criticism. There was a wide demonstration of opinion, especially on the part of non-official members of the European Group, in favour of the early establishment in the Government of India of a portfolio of Communications.

General Budget.

The Honourable the Finance Member, Sir James Grigg, presented his annual general budget on the evening of 28th February. He showed that when his predecessor a year earlier presented his budget for 1934-35 it was anticipated that the year 1933-34 would close with a surplus of 129 lakhs. The actual figure Sir James stated to be 272 lakhs. The revised forecast for 1934-35 similarly showed an improvement over the original budget. The total revenue for 1935-36 Sir James estimated at 90.19 lakhs, or 81 lakhs less than the revised estimate for 1934-35. He reminded the House that his predecessor uttered a warning that the figure of 44.38 crores could not be regarded as representing the permanent level of defence expenditure, though expenditure under this head had been cut to that figure for 1934-35. The contingency then foreseen had, he said, arisen, with the result of a net increase of 47 lakhs in the defence estimates. He expected the final position at the end of 1935-36 to be revenue 90.19 lakhs, expenditure 88.69 lakhs.

Dealing with the balance of 3.89 lakhs expected at the end of March, 1935, the Finance Member said Government had decided to set aside 1.00 lakhs for distribution to the provinces and for expenditure on schemes for the economic development of rural areas, 10.15 lakhs of the amount being allotted to measures to assist the development of the co-operative movement on sound financial foundations. Out of the same surplus, Sir James announced that Government proposed a special contribution of 40 lakhs to their reserve in the Road Development Fund and a further 25 lakhs for schemes of development in the North West Frontier Province, mostly for the construction of roads in the tribal areas, and the remainder for schemes of economic development in that area. He took a further 20 lakhs for the development of broadcasting, the programme specially in view under this last head including the construction of a large transmitting station in Delhi and of a similar new station at Madras, and the improvement and extension of the broadcasting stations in Calcutta and Bombay. After these special grants there

remained a surplus balance of 2.04 lakhs and out of this Sir James proposed to allocate 93 lakhs for the civil aviation programme and about 36 lakhs for the transfer of the Imperial Agricultural Research Institution from Pusa to Delhi.

As regards the surplus of 150 lakhs expected to be available for tax reduction in 1935-36, the Finance Member proposed to reduce forthwith the import duty on silver to 2 as, an ounce and to abolish the export duty on skins. Sir James said he was disposed to think that the protective import duty on salt ought to be abolished at once, but that as the abolition would perhaps have been a little harsh to vested interests which had grown up he proposed that the duty should be extended for another year without prejudice to any action which Government might see fit to take at the end of that year. The remaining estimated surplus of 1.42 lakhs he proposed to devote in accordance with the pledge of his predecessor, when he said that "relief must come first in restoring the emergency cuts in pay and secondly in taking off the surcharge on the income tax now to be imposed." The removal of the surcharges on income-tax and supertax altogether would cost 3.34 lakhs a year, while the removal of the tax on incomes between Rs. 1,000 and Rs. 2,000 would cost another 75 lakhs. Sir James added, "Clearly with a surplus of Rs. 1.42 lakhs we cannot remove the whole of the two surcharges and the quasi-surcharge, but what we can do is to reduce them all by one-third and this is what I propose. The cost will be Rs. 1.36 lakhs, leaving us with a purely nominal surplus of Rs. 6 lakhs."

The discussion of the motion for consideration of the Finance Bill was unusually prolonged. It extended over five days and ended in the motion being carried without a division. The detailed discussion of the Bill commenced on 1st April and concluded on 4th April and at the end of that day, as a result of amendments made by majority of the House, the Finance Member said the scheme placed before the House had been mutilated in a great many respects and that Government must therefore obviously consider the position thus created. Hence, he gave notice that he did not intend to move that the Bill be passed either that day or on the next morning which was allocated for official business.

When the House met on the following morning, the President read a message from His Excellency the Viceroy and Governor-General. This pointed out that the amendments made in the Finance Bill by the Assembly would if accepted entail a loss of revenue from four to five crores and so involve budgeting for a heavy deficit and all the deleterious results to India's credit which have invariably followed an unsound procedure of this character. The amendments therefore could not be accepted and His Excellency recommended the Assembly to restore the Bill to the form in which it was originally introduced. His Excellency added, "I have further considered whether it is possible to accept some of the financially less important amendments made, but one of these is definitely opposed to the interests of the agriculturist and the others are minor postal concessions which, though affording little or no benefit to the poor, would more than double the estimated deficit on the

Posts and Telegraphs Department and postpone the restoration of solvency in that service. Everyone of the remaining amendments involves a loss of at least half a crore of revenue and so must be ruled out so far as the current year is concerned." To the message His Excellency attached a formal recommendation that the Bill be passed in its original form.

There was an inquiry of the Finance Member whether the Bill as recommended contained the Government's original provision for the removal of export duty on sikus which the House had rejected. The Finance Member answered in the affirmative and at the same time handed in a notice of the amendments necessary to bring the Bill as the House left it into the form recommended. The Finance Member proceeded to move these amendments next morning. The most serious change made by the Assembly in the Bill in its original form was a reduction of the salt excise from Rs. 1-4 to As. 12. The Finance Member's first motion was for his restorative amendment to reinstate the Rs. 1-4 in the Bill. There followed long political speeches by the leaders of the Congress Party, the Independent Party and the Congress Nationalists. The leader of the Non-official European Group expressed disappointment that Government had not accepted at any rate some of the amendments which the Group had supported and declared that he and his friends would remain neutral when the amendment was put to the vote. A long debate ended in a division, in which 41 voted with Government and 64 on the other side. The Finance Member thereupon immediately asked the President to give a certificate that "the Chamber has failed to pass the Bill in the form recommended," and after some discussion on a point of order the President announced that he would give a certificate to that effect.

The Bill was afterwards passed without serious opposition in the Council of State and thereafter became law on receiving the assent of His Excellency the Viceroy.

An important non-official Bill dealt with during the Session was one promoted by Sir Cowasji Jehangir to amend the law relating to marriage and divorce among Parsees. The Assembly concurred with the Council of State in referring the Bill to a Joint Committee.

Autumn Session.

The Autumn Session of the Legislature commenced with the opening of the Legislative Assembly in Simla on Monday, 2 September.

At the outset of the proceedings of the House speeches of condolence were made concerning the recent deaths of Sir Basil Blackett, formerly Finance Member to the Government of India, and of other passed Members of the House.

The Assembly Session was remarkable for the number of motions for the adjournment of the House which were moved by members of the Congress. Such motions are normally regarded as votes of censure upon the Government, but in effect the Congress Party succeeded in converting them into a means of raising a variety of current topics on which they desired to make their views known and would not have been able to do so by the ordinary process of the ballot

for non-official resolutions. Some of the motions of which notice were given were disallowed by His Excellency the Governor General or ruled out of order. Three were thus prohibited on the first day of the Session. Their subjects dealt with such variety of matters as the despatch of troops to Abyssinia, the refusal to grant protection to the Indian Glass Industry and the acoustics of the Assembly Chamber.

An official Bill of much interest which was dealt with during the Session was one already passed by the Council of State, to provide for the censorship of posters advertising cinema shows, a measure drafted in view of the improper and suggestive form of posters exhibited in public places.

The most important measure of the Session was an official Bill to amend the Criminal Law. The measure was designed to take the place of the Criminal Law Amendment Act passed in 1932 and due to expire at the end of the current year. The new Bill provided for the renewal of most but not all the provisions of that Act and added nothing to the Act. The Act was directed mainly but not entirely against the Civil Disobedience movement. Government when they introduced it had in mind also two other threats to peaceful progress, namely Terrorism and Communism. On the present occasion, the Home Member in moving for the consideration of the new Bill added a third, namely "the baneful shadow of communal dissension," which he said now seems to be an even more dangerous third. It was against these three dangers, he said, that the existing Act provided most necessary safeguards. He added that while Civil Disobedience had only been suspended and not stopped it had now been quiescent in some of its manifestations for some time and Government had therefore decided to drop those sections of the Act which were directed particularly against its manifestations. The Hon. Member made an unusually long speech and explained in some detail the particular reasons requiring the maintenance of different provisions of the existing law which it was proposed to renew. He was able to quote Mr. Gandhi himself in support of his argument. The Home Member cited grave reports from different Provincial Governments on the same subject and as an example of the kind of agitation that was going on quoted from a Bihar paper a poem of which he said this was a rough translation :—

Set fire to every house
Stir up life everywhere
Allow the breast to be riddled by gun shot
Drive out the country's enemies
Dye the cloth with your blood
Destroy the British rule
Let the head hang on the gallows
Throw away the foreign goods.

The first speaker on the Non-Official side of the House rose on a Congress Party front bench and declared the Bill to represent in effect an atrocity. This may be regarded as a key to the substance and tone of the criticisms which followed from the Left of the House. Many of the Members there had themselves been punished under the Act of 1933. "We

are all ex-convicts on this side of the House," declared a Congress Party front bench. Sir Mohammed Yakub, supporting the Bill on the second day of its discussion, trenchantly condemned communalists who excited tension and riots in India and pointedly declared that many of them sat in Simla and at the expense of the Government of India "because they also draw their allowance of Rs. 20 a day." "In the present circumstances of the country," he said, "for a Government to impose restrictions became more a duty than a mere convention and a Government would not be worthy of the name if it did not restrict the liberties of some in the interests of all." Some speeches were of great length and after many days debate the motion was defeated by 71 votes to 61.

Another measure dealing with the same department of affairs which was discussed during the Session was a Bill promoted by Mr. B. Das, of the Congress Party, to repeal the Indian Criminal Law Act of 1908, this Act being a measure which declares unlawful organizations whose aim is the promotion of violence and empowers Provincial Governments to declare unlawful associations whose object is the overthrow of the administration or the promotion of disorder. Mr. Das introduced his Bill in the preceding Delhi Session and in Delhi on 29th March also moved for its consideration. There was considerable debate on this measure, but up to the close of the Simla Session the time for putting the motion to the vote was not reached.

There was a lengthy discussion on a motion moved by a member of the Congress Party for the appointment of a Committee to investigate whether the situation arising out of the Quetta

earthquake was properly handled, particularly with regard to the rescue of and search for the living wounded and dead and the salvage of property. Mr. Bhulabhai Desai, the Leader of the Congress Party, accepted responsibility for having drafted the resolution. The Hon'ble the Home Member in reply asked, "Is there a lower form of exploitation than that of exploiting this horrible tragedy, which has shocked the world, in order to gain a political advantage? When the Home Member completed his speech, Members on the Left moved the closure. The House divided on the subject and the closure was refused by 65 votes to 67. The minority included the Congress Party and the majority nearly everybody else. The first speaker after this division was Sir Cowasji Jehangir, who said it had never been his misfortune to listen to a more grossly atrocious speech than the one delivered by Mr. Bhulabhai Desai, or a more illogical speech containing specious arguments unworthy of the Leader of the Opposition, unworthy of a great lawyer. He was, he said, astir at the speech. Sir Cowasji said he hoped Mr. Desai did it "unconsciously," a remark which was immediately greeted with "No, No" from the Congress benches. The main resolution was at the end of a long debate thrown out by 76 votes to 51, the minority again being almost entirely the Congress Members.

An important Government measure briefly discussed during the Session was the Bill to regulate the Payment of Wages of a certain class of persons employed in industry. This measure came up on report by Select Committee and after a brief debate the Government motion for its consideration was adopted. Further proceedings of the Bill stood over until the next Delhi Session.

The Indian Tariff Board.

Cotton Textiles.—The Government of India announced on 10th September, 1935, the appointment of a Special Tariff Board. The Government Resolution on the subject quoted the Agreement made between the British Textile Mission and the Mill Owner's Association, Bombay, in the Autumn of 1933. The Agreement, it was pointed out, was due to end on 31st December 1935. Government noted that when the Agreement was being negotiated they were considering what protective duties were necessary for the Indian industry and that the duties specified in the Agreement were with one slight modification set out in the Indian Tariff

(Textile Protection) Amendment Act which became law on 1st May, 1934. The Resolution continued: "In the course of the debate on the Bill, the then Commerce Member, Sir Joseph Blore, in moving that the Bill be referred to Select Committee stated on behalf of the Government that though it was intended to continue the textile industry protection for a period of five years, the tariff rates on British goods would remain in force for two years. In accordance with the terms of the Agreement between the Lancashire delegation and the Mill Owners' Association, Bombay. On the expiry of the two years

covered by the Agreement, the duties on British goods for the remaining period of protection would have to be decided on a review of the conditions then existing and in the light of such experience as may have been gained. The period of Agreement will expire on 31st December, 1935, and it will be necessary to introduce in the course of the next Budget session legislation to give effect to any changes in the duties which may be found necessary. The Government of India have therefore decided that the inquiry foreshadowed by Sir Joseph Shore's speech should take place at an early date and that it should be entrusted to a Special Tariff Board constituted as follows—President, Sir Alexander Murray, K.R., C.I.E.; Members, Mr. Fazal Ebrahim Rahimtoola, Diwan Bahadur A. Ratnaswamy Mudaliar.

The Resolution specified the following terms of reference:—"To recommend, on a review of present conditions and in the light of the experience of the effectiveness of the existing duties, the level of duties necessary to afford adequate protection to the Indian cotton textile industry against imports from the United Kingdom of (a) cotton piecegoods (b) cotton yarn (c) fabrics of artificial silk, (d) mixture fabrics of cotton and artificial silk.

"By adequate protection is meant duties which will equate prices of imported goods to the fair selling price for similar goods produced in India. In the course of this inquiry, the Board will give a full opportunity to the Cotton Textile Industry whether in India or the United Kingdom to present its case and if necessary to answer the cases presented by the other interested parties.

"The Board will not be required to make any recommendations in respect of revenue duties."

Firms or persons desirous of having their views considered by the Special Tariff Board were invited to send their representations to the Secretary of the Board.

The Board often long continued sittings, duly reported to Government, and their report has not yet been published.

The Government of India in September, 1935, also published the report of the Indian Tariff Board on the question of equality in respect of the manufacture of shuntles. The Board stated, "The competition is at present not much more than fear for the future but we recommend that the situation should be watched. Should the fear of Japanese competition materialise Japanese prices would become relevant and the case for tariff inequality will be clearly established."

Woolen Textile Industry.—A Tariff Board comprising Mr. G. Wiles, C.S.I., C.I.E., I.C.S. (President), Mr. Fazal I. Rahimtoola, and Mr. H. R. Bathija, appointed on 20th October, 1934, to consider a representation received from certain woolen mills requesting extension of protection to the woolen industry, signed its report on 10th June, 1935, and the report was published by Government on 23rd January, 1936. The Board reported that the British India Corporation, which controls two of the largest woolen mills in India, namely the

Cawnpore Woolen Mills and the New Egerton Woolen Mills, at Dhariwal, did not reply to the Board's communique calling upon all firms and persons interested to state their case to the Board and that in answer to the questionnaire which was sent to them as to other mills, the Corporation wrote to the Board regretting that they found it necessary in the interest of their shareholders to refuse to divulge any statistics of costs or output. The document in question expressed sympathy with the application of other mills for protection, but asserted that the Corporation did not require additional protection except against Italy and Japan. This attitude, the Board stated, was confirmed in oral evidence by the representative of the Corporation.

The Board added, "The Corporation must therefore, know perfectly well that their refusal to divulge statistics which are necessary for the examination by the Tariff Board of the claim of the rest of the industry to protection can only be interpreted in one way, viz, that they themselves do not require protection." The output of the mills abstaining from the application for protection is, the Board pointed out, at least half that of the whole industry. The Board, therefore, realized that there would be some justification for rejecting the application forthwith. They were, however, so impressed by the rapid inroads being made by Japan into the Indian markets that they thought it necessary to complete their examination of the general case, so far as they were able to do so, in the absence of complete statistics "and we arrive at certain conclusions which lead us to recommend the imposition of a form of protection in spite of the disabilities under which we have acted." The Board accordingly made a series of recommendations.

The Government of India, in view of the attitude of the British India Corporation declined to accept them, except certain recommendations for the assistance of the hand loom industry and small factory industry. The Tariff Board emphasised the increasing competition from the shoddy fabrics of Italy and Poland which this section of the industry were experiencing. The Board described the unorganized condition of this "cottage industry," as it is called, and said: "We think that the hope of the industry must lie in the help which can be given by the Industries Departments of local Governments and by such organization as the All-India Spinners Association and by the gradual improvement in the quality of Indian wools. Technical advice and assistance in marketing arrangements are doing much to foster the sister cotton industry, and we believe that similar advice and assistance, particularly in the finishing of woolen goods, and help both in keeping weavers in touch with the demands of the market and in disposing of their manufactures without the intervention of the grasping middleman, should be equally effective in this industry."

The Government of India provided Rs. 5 lakhs in their annual Budget for giving such assistance to the cottage industry and a short Bill implementing this decision was negotiated through the Indian Legislature in its Budget Session early in 1936.

Indians Overseas.

NUMBERS.—The total Indian population resident in the countries to which Indians mainly emigrate for purposes of settlement, according to the latest available returns, is as follows:—

Name of country.	Indian population.	Date of Information.
<i>British Empire.</i>		
1. Ceylon	6,50,577†	.. 1932 Agent's Report.
2. British Malaya*	6,24,009	.. 1931
3. Hong Kong	2,555	.. 1911
4. Mauritius	2,65,796	.. 1931 Protector of Immigrants' Report.
5. Seychelles	332	.. 1911
6. Gibraltar	50 (approximately)	.. 1920
7. Nigeria	100	.. 1920
8. Kenya	39,644	.. 1931 Census.
9. Uganda	13,026	.. 1931 Census.
10. Nyasaland	805	.. 1926
11. Zanzibar	14,242	.. 1931 Census.
12. Tanganyika Territory	23,422	.. 1931 Census.
13. Jamaica	17,950	.. 1932 Report of the Protector of Immigrants.
14. Trinidad	1,40,689	.. 1932 Do.
15. British Guiana	1,34,059	.. 1932 Do.
16. Fiji Islands	78,975	.. 1932 Report of Secretariat for Indian Affairs.
17. Basutoland	172	.. 1921
18. Swaziland	7	.. 1921
19. Northern Rhodesia	56 (Asiatics)	.. 1921
20. Southern Rhodesia	1,700 (")	.. 1931
21. Canada	1,22,911	.. 1931 Census.
22. Australia— Western Australia .. 300 Southern Australia .. 200 Victoria .. 400 New South Wales .. 700 Queensland .. 300 Tasmania .. 100	2,000 (approximately)	.. 1922
23. New Zealand	1,166	.. 1932 Official Year Book.
24. Natal	1,50,920	.. 1933 Protector of Immigrants Report.
25. Transvaal	15,747	.. 1926 } Statistics of Immigration Department.

Total of Indians in British Empire	22,32,676	
Grand Total of Indians Overseas	23,33,201	

* Including Straits Settlements, Federated and Unfederated Malay States.

† Indian Estate Labourers only.

Origin of Indian Emigration.—Emigration is prohibited by the Hindu Shastres, and there is little evidence of any settlement of Indians overseas in early times except in Sumatra, Java and Ceylon. Emigration for purposes of labour dates from the beginning of the 19th century. From 1800 A. D. onwards Indians crossed the Bay to the Straits Settlements to work on the sugar, spice, tobacco, and coconut plantations of Penang, and this intercourse was allowed to continue for long without regulation. The first officially recorded instance of genuine recruitment for labour emigration occurred in 1830, when a French merchant, named Joseph Argand, carried some 150 artisans to Bourbon. The abolition of slavery in British colonies in 1834 gave the first great impetus to the movement. The sugar planters of Mauritius at once turned to India as their best recruiting ground, and between 1834 and 1837 obtained at least 7,000 recruits from Calcutta. The Government of India at a very early stage realised the necessity of bringing such emigration under regulation. The Law Commission was asked to investigate the case and to make recommendations for securing the well-being of emigrants. They advised that no legislation was required except in order to prevent undue advantage being taken of the simplicity and ignorance of emigrants by providing that a magistrate should satisfy himself that all contracts were entered into freely and understood by them and in order to secure that sufficient provision was made for their accommodation and sustenance during the voyage. A copy of every engagement was also to be transmitted to the Government under which the emigrants were to live. These recommendations were embodied in the first Emigration Act (V of 1837), which also provided that contracts should be determinable after 5 years.

History of Emigration.—Under the above Act emigration during 1837 was permitted to Mauritius, British Guiana and Australia (89 men, the first and last direct emigrants to Australia). In 1838 emigration was suspended owing to agitation in England regarding the abuses to which the system was liable, and a committee of enquiry reported in 1840 that emigrants were being entrapped by force or fraud, robbed of their wages and treated with brutality. In consequence, emigration was prohibited (Act XV of 1842) except to Mauritius and there control was tightened. In Act XXI of 1844 emigration under still stricter regulation was allowed to Jamaica, British Guiana and Trinidad. Act XIII of 1847 removed the restrictions on emigration to Ceylon. The emancipation of slaves in the French colonies in 1849 gave rise to a system of emigration from French Indian ports to Réunion and Bourbon, which was largely based on crimping in British territory. This practice was checked by Act XXIV of 1852. In 1858 emigration was opened to St. Lucia, and in 1860 to St. Vincent, Natal and St. Kitts. In the latter year a more elaborate Act, based on a convention with the French Government was passed legalising and regulating emigration to Réunion, Martinique, Guadeloupe, and French Guiana. Act XIII of 1864 marks an important stage in the history of emigration, since it elaborated and consolidated the whole system of control.

It was itself amended in 1869 and 1870 in important respects with the object of preventing epidemics on emigrant vessels and improving sanitary conditions in settlements. In 1869 emigration was permitted to Grenada, and in 1872 to Surinam. Owing to the removal of the Straits Settlements from the control of the Government of India in 1867, emigration to that colony came under all the restrictions imposed by the Emigration Act and was only permitted from the port of Negapatnam. Owing to the injury caused to the agricultural industries of the colony, these restrictions were removed in 1872, subject only to magisterial control of recruitment in India. In 1870 complaints reached the Government of India of gross abuses in the treatment of emigrants in British Guiana. A commission of enquiry was appointed, and their report led to important legislation in the colony for the protection of Indian immigrants, which was subsequently extended to Trinidad. Owing to similar complaints from Natal and Mauritius, commissions of enquiry were also instituted in both these colonies, and their reports in 1872 brought to light a number of points requiring amendment.

Recent Legislation.—In 1871 a fresh consolidating Act was passed (Act VII of 1871.) by which the Acts regulating emigration to the French Colonies and two amending Acts to Act XIII of 1864 were incorporated in the general law. The question of revision of the law again came up for consideration in 1882, when several cases of kidnapping and other objectionable practices were reported to the Government of India. The opportunity was taken to depute two officials (Major Pitcher and Mr. Grierson) to ascertain, in the N. W. P. and in Bengal respectively, the way in which the system of recruitment actually worked, the respects in which it was open to improvement, and the attitude of the people towards emigration. Their reports were reviewed by the Government of India, and finally in 1883 the law was again recast and consolidated by Act XXI of that year. This Act specifies the countries to which emigration is lawful, but empowers the Governor-General in Council to add to the list by notification, and also to prohibit emigration to any of the countries in the list on the ground of epidemic disease and/or excessive mortality among emigrants in such country, or on the ground that proper measures have not been taken for the protection of emigrants, or that the agreements made with them in India are not duly enforced. This Act with certain amendments of no importance to the system of indentured emigration remained in force until 1908, when a fresh revision of the law was undertaken.

Under the Act of 1908 (XVII of 1908) the countries to which emigration was lawful were the British Colonies of Mauritius, Jamaica, British Guiana, Trinidad, St. Lucia, Grenada, St. Vincent, Natal, St. Kitts, Nevis, Fiji, the Seychelles, the Netherlands Colony of Dutch Guiana and the Danish Colony of St. Croix. Emigration to St. Lucia, Grenada, St. Vincent, St. Kitts, Nevis, the Seychelles and St. Croix ceased soon after the passing of the Act, the demand for fresh labour having died out. Emigration to Natal was discontinued from the 1st July 1911 as the Government of India were

satisfied that it was undesirable to continue to send Indian labour to that country. Emigration to the French Colonies of Reunion, Martinique and Guadeloupe had been suspended prior to the passing of the Act of 1908 on account of repeated complaints of the inadequate precautions taken for the proper treatment and repatriation of the immigrants.

The labour laws of the several Colonies provide for the protection and welfare of resident Indian labourers. The Government of India also occasionally depute to the colonies their officers to report on the condition of Indian labourers. Deputations from India visited Fiji and British Guiana in 1921. In spite of all precautions certain social and moral evils had grown up in connection with the indentured system of emigration and Indian public opinion has during the last decade been strongly opposed to it. The whole system was exhaustively examined by the Government of India in 1915 in the light of the report received from Messrs. McNeill and Chimanlal, and they arrived at the conclusion that the time has come when contract labour should be abolished. The Secretary of State for India accepted this policy and authorised the Government of India to announce the abolition of the indentured system and the announcement to this effect was made in 1916.

In 1922 a further step forward was taken in Act VII of 1922 which prohibited indentured emigration and all unskilled emigration, except to countries specially approved by the Legislature. Emigration to Ceylon and Malaya was brought under control, and the definition of "Emigrant" was extended to cover all persons "assisted" to depart from India.

Present Position.—Indian emigration questions have recently taken on a wider aspect. The status of Indians in the Empire generally is one in which the Indian public now take keen interest. It is no longer possible to deal with the treatment of Indian labour apart from other classes of Indian emigrants and travellers. In several colonies and dominions considerable Indian communities have sprung up, which although composed largely of the descendants of indentured labourers, are themselves free and lawfully domiciled citizens of the countries in which they are settled, but have not yet been placed on a footing of legal, social, political and economic equality with the rest of the population. The issues round which public interest at present centres are three:—

(a) Control of emigration.

(b) Rights of Indians to admission to other parts of the Empire.

(c) Rights and disabilities of Indians domiciled overseas.

These questions may be considered separately.

Control of Emigration.—So far as unskilled labour is concerned, the Government of India have assumed absolute powers of control. The terms of section 10 of the Emigration Act of 1922 are as follows:—

"10. (1) Emigration, for the purpose of unskilled work, shall not be lawful except to

such countries and on such terms and conditions as the Governor-General in Council, by notification in the *Gazette of India*, may specify in this behalf.

"(2) No Notification shall be made under sub-section (1) unless it has been laid in draft before both Chambers of the Indian Legislature and has been approved by a resolution of each Chamber, either without modification or addition, or with modifications and additions to which both Chambers agree, but, upon such approval being given, the notification may be issued in the form in which it has been so approved."

Under this law emigration has been legalised to Ceylon on the following conditions:

(1) The emigrant shall—

(a) have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of Ceylon, or

(b) have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him.

(2) The emigrant shall not, before leaving British India, have entered into a contract of service for a period exceeding one month.

(3) Within six months from the issue of this Notification, or within such further period as the Governor-General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that any contract of service for a period exceeding one month entered into by an emigrant shall be void.

(4) No part of the cost of his recruitment, subsistence during transport, or transport shall be recoverable from any emigrant and all expenses in this connection shall be defrayed from a common fund to be raised in such manner and managed by such agency as may appear suitable to the Colonial Government.

(5) The Government of Ceylon shall at any time when so desired by the Governor-General in Council admit and give all facilities to an Agent appointed under section 7 of the Act.

(6) Within one year of his arrival in Ceylon any emigrant who has been assisted to emigrate at the cost of the common fund referred to in clause (4) shall, on satisfying the Agent appointed under section 7 of the Act that his return to his home is desirable either on the ground of the state of his health or on the ground that the work which he is required to do is unsuitable to his capacity, or that he has been unjustly treated by his employer, or for any other sufficient reason, be repatriated free of cost to the place of recruitment, and the costs of such repatriation shall be defrayed by the Government of Ceylon or the Ceylon Planters' Association.

(7) If at any time there is no Agent appointed under section 7 of the Act, the Government of Ceylon shall appoint a person to perform the duties of the Agent as set forth in clause (6).

(8) Within six months from the issue of this Notification, or within such further period as the Governor-General in Council may by

notification appoint, the Legislature of Ceylon shall have enacted that no payment made in India by a recruiter to an emigrant to enable him to pay off debts before emigrating shall be recoverable.

(9) The Government of Ceylon shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of persons emigrating to Ceylon in accordance with this Notification.

Similar conditions have been imposed in the case of Malaya. Emigration was also permitted to Mauritius for a period of 1 year only with effect from May 1st, 1923, and limited to a number not exceeding 1,500 labourers. The terms were more onerous than in the case of nearer Colonies and the arrangement has now lapsed.

Emigration to British Guiana for the purpose of unskilled work has also been declared lawful on the terms and conditions given below, but the date from which emigration is to commence has not yet been fixed:—

Emigration to British Guiana.—Emigration to British Guiana for the purpose of unskilled work shall be lawful with effect from such date as the Governor-General in Council may with the concurrence of the Governor of British Guiana notify in the *Gazette of India* on the following terms and conditions, which shall thereupon become operative:—

(1) The family shall be the unit for the purposes of emigration. Not more than 500 families shall be permitted to emigrate and the number of persons included in the said 500 families shall not exceed 1,500.

(2) The emigrants shall either have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of British Guiana, or have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him.

(3) No part of the cost of his recruitment of subsistence during transport shall be recoverable from any emigrant and all expenses in this connection shall be borne by the Government of British Guiana or met from funds at their disposal.

(4) The Government of British Guiana shall at any time when so desired by the Governor-General in Council, admit and give all facilities to an Agent appointed under section 7 of the Act.

(5) If at any time there is no Agent appointed under section 7 of the Act, or if the Agent is absent or unable to perform his duties, the Government of British Guiana shall at the request of the Governor-General in Council appoint a person to perform temporarily the duties of the Agent.

(6) Prior to the arrival of the emigrants a Settlement Commission shall be appointed in British Guiana to select and prepare suitable agricultural land for the emigrants and generally to supervise their employment. The Agent referred to in clause (4) shall, on appointment, be a member of such Commission.

(7) The Government of British Guiana shall offer to each family for its separate enjoyment a holding comprising not less than five acres of suitable agricultural land prepared for cultivation on the terms hereinafter set out in a locality which shall be healthy and shall have an adequate supply of good drinking water. All expenses in connection with the preparation of the holdings shall be borne by the Government of British Guiana and shall in no case be recoverable from an emigrant.

The annual rent of the holding shall be fixed by the Settlement Commission at a rate not exceeding the lowest rate paid in the locality.

After an emigrant has been in occupation of a holding for three years, he shall, provided that he has cultivated a portion of the holding either by himself or through some member of his family, be entitled to a grant of the holding on payment at any time during the ensuing four years of such fees not exceeding 24 dollars as may be fixed by the Settlement Commission.

On the expiry of seven years from the date of the commencement of his occupation of a holding an emigrant shall acquire absolute ownership in the holding provided that he has paid the rent and fees referred to in the foregoing paragraphs of this clause and has brought under cultivation either by himself or by some member of his family half the area of his holding.

(8) An emigrant on arrival in British Guiana shall be housed and maintained without charge by the Government of British Guiana for at least one month.

(9) If any emigrant so requires loans shall be made to him for maintenance, house accommodation, payment of rent and for agricultural purposes generally. Free medical assistance and free skilled supervision shall be provided.

(10) Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of 7 years from the date of his arrival in British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 3 and not more than 5 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of half of the cost of his passage from his residence in India to British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 5 and not more than 7 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of quarter of the cost of his passage from his residence in India to British Guiana.

(11) Notwithstanding anything contained in the last preceding clause the Government of British Guiana on the request of an Agent appointed under section 7 of the Act shall repatriate at its own expense and without any payment by or on behalf of the emigrant to the place of his former residence in India any emigrant at any time after his arrival in British Guiana.

(12) An emigrant shall be at liberty at any time after his arrival in British Guiana to take up work or employment other than or in addition to the cultivation of a holding on lease from the Settlement Commission.

(13) The ordinance enjoining compulsory education in British Guiana shall be enforced to the same extent in the case of Indian children as in the case of children belonging to other communities.

(14) Boards of arbitration in regard to wages shall be established before the arrival of the emigrants and Indians shall be adequately represented on such boards.

(15) Any Indian who has emigrated to British Guiana before the date of this notification and under any agreement in force at the date of this notification is entitled to an assisted return passage to India shall not be required to pay more than 25 per cent. of the excess in the cost of his return passage and clothing over the cost of such passage and clothing at the time of his first arrival in the colony.

(16) Any Indian who has emigrated to British Guiana before the date of this notification and has at the date of this notification become or thereafter becomes destitute shall be entitled to be repatriated to India at the expense of the Government of British Guiana without being further required to prove that he has become incapable of labour.

(17) The Government of British Guiana shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of the persons emigrating to the Colony in accordance with this notification.

Admission of Indians to Other Parts of the Empire.—On the motion of the Government of India this question was discussed at the Imperial War Conferences, 1917 and 1918, and the policy accepted by the self-governing dominions and the British Government was embodied in the following resolutions:—

“(1) It is an inherent function of the Governments of the several communities of the British Commonwealth including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities.

“(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose of education; such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement.

“(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition: (a) That not more than one wife and her children shall be admitted for each such Indian; and (b) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian.”

The first paragraph of this resolution has regularized the various restrictions on immigration which the self-governing dominions have, from time to time, adopted and which, without expressly differentiating against Indians are in practice used in order to check Indian immigration, the objections to which are stated to be not racial or political but economic. Australia prohibits the entry of any person who fails to pass a dictation test of not less than 50 words in any prescribed language. New Zealand prohibits the entry of any person who has not received in advance a permit from the Dominion Government which is refused to any person regarded as unsuitable to settle in the country. South Africa prohibits the entry of any person deemed by the Minister of the Interior on economic grounds or on account of his standard or habits of life to be unsuited to the requirements of the Union. Canada prohibits the landing of any person who has come to the Dominion otherwise than by continuous journey from the country of which he is a native and unless he possesses in his own right 250 dollars. Newfoundland and the Irish Free State impose no restrictions. All the self-governing Dominions have adopted special exemptions in favour of students, tourists and merchants visiting the countries for the temporary purposes of commerce, pleasure, or education. India on its side has assumed power to regulate the admission of immigrants from any other part of the Empire or foreign countries, by means of passports. A bill has also been passed by the Indian Legislature empowering the Government of India to make rules “for the purpose of securing that persons not being of Indian origin, domiciled in any British possession, shall have no greater rights and privileges as regards entry into and residence in British India, than are accorded by the law and administration of such possession to persons of Indian domicile.” With regard to the Crown colonies and protectorates, the attitude of the Indian Government is that there is no justification for placing any restrictions on the immigration of British Indians, which are not placed on other classes of British subjects, and this principle has in practice been observed by the Colonial Office except in the case of Kenya colony where, as stated hereafter, the British Government has reserved to itself the right to impose restrictions on the immigration of classes of people whose entry into the colony may have an adverse effect on the economic evolution of the indigenous population.

Rights and Disabilities of Indians Lawfully Domiciled Overseas.—The policy of the Empire is summed up in the resolution of the Imperial Conference, 1921, which was recorded in the following terms:—

“This Conference reaffirms that each Community of the British Commonwealth should enjoy complete control over the composition of its own population by restricting immigration from any of the other communities, but recognises that there is incongruity between the position of India, as an equal member of the Empire, and the existence of disabilities upon British Indians lawfully domiciled in some parts of the Empire, and this Conference,

therefore, is of opinion that in the interests of the solidarity of the Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised."

"The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India while appreciating the acceptance of this resolution, nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found as soon as may be to reach a more satisfactory position.

Summary of present Position.—Outside Australia, N. Zealand and Canada the position stands as follows:—

(1) **South Africa.**—The main grievances of Indians, which led to a passive resistance movement headed by Mr. Gandhi, were settled by the compromise embodied in the Indians Relief Act, 1914 and by the guarantee known as the Smuts-Gandhi agreement. The substance of this agreement is embodied in the following extracts from letters:—

(1) Mr. Gorges, Secretary for the Interior, to Mr. Gandhi, June 30th, 1914: "With regard to the administration of existing laws, the Minister desires me to say that it always has been, and will continue to be, the desire of the Government to see that they are administered in a just manner and with due regard to vested rights."

(2) Mr. Gandhi to Mr. Gorges, July 7th, 1914: "By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading, no matter how often he shifts his residence or business from place to place in the same township."

"This has been officially interpreted to mean that the vested rights of those Indians who were then living and trading in townships, whether in contravention of the law or not should be respected."

In 1920 an Asiatic Enquiry Commission was appointed to investigate the grievances of Indians regarding their rights to trade and hold land in the Union. Their main recommendations were as follows:—

(1) Law 3 of 1885 (Transvaal), the Gold Law of the Transvaal (Act No. 35 of 1908) and Act No. 37 of 1919 should not be repealed.

(2) There should be no compulsory repatriation of Asiatics; but

(3) Voluntary repatriation should be encouraged.

(4) There should be no compulsory segregation of Asiatics; but

(5) A system of voluntary separation should be introduced under which municipalities should have right, subject to certain conditions:—

(a) to lay out residential areas for Asiatics;

(b) to set aside certain streets or portions of the town for Asiatic traders to which existing license holders should gradually be attracted.

(6) These areas should be selected and allocated by a board of independent persons in consultation with the Municipal Council and Asiatic community.

(7) In Natal the right of Asiatics to acquire and own land for farming or agricultural purposes, outside townships, should be confined to the coast belt, say, 20 to 30 miles inland.

(8) A uniform "License Law" applicable to all the Provinces of the Union should be possible, be enacted. If that is impracticable, the law relating to the issue of Trade Licenses in the Cape Province, the Transvaal and Natal should be assimilated in a comprehensive consolidating Act of Parliament providing, *inter alia*:—

(a) That the granting of all licenses to trade (not being liquor licenses) shall be entrusted to municipal bodies within the area of their jurisdiction; outside those areas, to divisional Councils in the Cape Province, and in the other Provinces to special Licensing Officers appointed by the Administrator.

(b) The grounds upon which an application for the grant of a new license may be refused.

(c) That the reasons for the refusal to grant any license shall be recorded, together with any evidence tendered for or against the application.

(d) That, in the case of the refusal of a license on the ground that the applicant is not a fit and proper person to hold the same or to carry on the proposed business, there shall be a final appeal to a Special Appeal Board, appointed by the Administrator.

(e) That municipal bodies shall have the right to prohibit the license holder, or any other person, from residing in any shop, store or other place of business.

(9) There should be no relaxation in the enforcement of the Immigration Laws, and more active steps should be taken to deal with prohibited immigrants who have evaded the provisions of those laws.

(10) The administration of the Asiatic policy of the Government should be placed in the hands of one official, under whose charge would come all administrative functions, together with the official records relating to Asiatics. This officer should also be entrusted with the duty of securing full statistics regarding Asiatics in the Union and of the arrivals in and departures from South Africa. Details of all applications for trade licenses, and transactions in connection with the purchase of land and property made by Asiatics throughout the Union, should be sent to him in order to ensure the enforcement of the provisions of Section 8 of Act 22 of 1913.

On the other hand, he should keep in close touch with the various sections of the Indian community, see that the laws are applied in a just manner, give a ready ear to any complaints or grievances and generally safeguard their interests.

From the above it will be observed that the Commission recommended the retention of a law prohibiting the ownership of land by Asiatics in the Transvaal, and another of its recommen-

dations, threatened the right which Indians had previously enjoyed of acquiring and owning land in the Uplands of Natal. Against this latter proposal the Government of India earnestly protested, but it was not accepted by the Union Government.

Present Position.—Indians enjoy both the political and municipal franchise only in the Cape Province and the municipal franchise only in Natal. In the remaining two provinces they are not enfranchised. They are subjected to differential treatment in the matter of trading licenses, specially in the Transvaal. Their immigration into the Union is barred and severe restrictions exist on inter-provincial migration. In the Transvaal they are not allowed to acquire immovable property outside locations and on the Witwatersrand they are subject to the restrictions of the Gold Law.

The anti-Asiatic party have made several efforts, especially in Natal, further to curtail the rights of Indians. Some of these are merely irritating social disabilities, such as railway regulations debarring Indians from travelling in any other carriages except those reserved for them, and similar rules restricting their use of tramways at Durban, and excluding them from race courses and betting club rooms. Examples of recent anti-Asiatic legislation of major importance are:

(a) The Natal Rural Dealers Licensing Ordinance, transferring the power of granting trading licenses from the Licensing Officer to an elected Licensing Board, on which Indians may not sit.

(b) The Durban Land Alienation Ordinance This Ordinance, which enables Municipalities in selling land to assign it for particular communities, and to that extent to secure segregation, has been allowed on condition that Asiatics are given reasonable opportunity for acquiring adequate residential sites.

(2) **Kenya Colony.**—The grievances of Indians domiciled in this Colony are fully set forth in the published despatch of the Government of India, dated October 21st, 1920. The controversy centred round the following points:—

(a) **FRANCHISE.**—Indians have not the elective franchise. The Government of India proposed that there should be a common electoral roll and a common franchise on a reasonable property basis plus an educational test without racial discrimination for all British subjects.

(b) **SEGREGATION.**—Professor Simpson who was sent to East Africa to report on Sanitary matters, recommended segregation on sanitary grounds. The Government of India objected, firstly, that it was impracticable; secondly, that it was commercially inconvenient; and thirdly, that Indians are in practice unfairly treated in the allocation of sites.

(c) **THE HIGHLANDS.**—Lord Elgin decided in 1908 that as a matter of administrative convenience grants of land in the upland area should not be made to Indians. The whole area has now been given out, and the Government of India claim that there is no land left to which Lord Elgin's decision applies. This decision

has now, however, been extended so as to prohibit the transfer of land in the uplands to non-Europeans.

(d) **IMMIGRATION.**—Suggestions have been put forward for restricting Asiatic immigration into Kenya. The Government of India claim that there is no case for restricting Indian immigration and that such restrictions would be in principle indefensible.

The Settlement.—The decisions of the British Government were contained in a White Paper presented to Parliament in July 1923. It was held that the guiding principle should be that "the interests of the African native must be paramount," and in light of this it was decided:—

(a) **FRANCHISE.**—A communal franchise was adopted with 11 seats for elected Europeans, 5 elected Indians, one nominated Arab, one missionary representing the Africans, and a nominated official majority. One Indian is also appointed on the Governor's Executive Council.

(b) **SEGREGATION.**—The policy of segregation as between Europeans and Asiatics is abandoned.

(c) **THE HIGHLANDS.**—The existing practice is maintained both as regards initial grants and transfers. A similar reservation in the lowlands is offered to Indians.

(d) **IMMIGRATION.**—Racial discrimination in immigration regulations is rejected. But in the economic interests of the Africans, further control over immigration is necessary. Some arrangement is required for securing a strictly impartial examination of applications for entry into Kenya. The Governors of Kenya and Uganda have been instructed to submit joint proposals for legislation.

The Government of India reviewed their decisions in a resolution published on August 18th, 1923, and recorded "their deep regret that His Majesty's Government did not feel justified in giving greater effect to the recommendations made by them" and reserved liberty to reopen the case on a suitable opportunity. They stated their intention of making representations regarding the action to be taken to implement these decisions, particularly in the matter of the Immigration regulations.

Following upon the Kenya award statutory action was taken by the local administration on the franchise question. Adult suffrage on communal lines was conferred upon Indians. As regards immigration, the Government of India took the opportunity to urge the postponement of the bill giving effect to the decision of His Majesty's Government until such time as the Committee proposed by their representatives at the Imperial conference in 1923 had an opportunity of examining the question of the restrictions therein embodied. Accordingly the introduction of the bill was postponed at the instance of the Colonial Secretary. The Government of Kenya was also asked by His Majesty's Government for an explanatory statement regarding the method proposed for the administration of immigration measures. The Government of India received an assurance from the Colonial Secretary that example opportunities

would be afforded for the expression of their views; and that earnest attention would be given to any representation as which their Committee desired to make. As has already been stated such a Committee was appointed in March 1924. The following statement made by the Secretary of State for the Colonies in the House of Commons on 7th August 1924 shows the result of the representation made by the Colonies Committee:—

“(1) IMMIGRATION.—My position is that if danger ever arises of such an influx of immigrants, of whatever class, race, nationality or character, as may likely be prejudicial to the economic interest of the natives, I hold myself entirely free to take any action which may be necessary. Conflicting statistics which have been laid before me have not enabled me to reach a definite conclusion as regards the extent of net Indian immigration. Accordingly steps will be taken to create a statistical department to obtain accurate information with regard to persons of all races arriving in or departing from Kenya. Meanwhile the Kenya Immigration Ordinance will not be enacted.

(2) FRANCHISE.—I have given careful consideration to representations in favour of a common poll, but I am not prepared to resist the conclusion already arrived at that in the special circumstances of Kenya, with four diverse communities, each of which will ultimately require electoral representation, the communal system is the best way to secure the fair representation of each and all of these communities.

(3) HIGHLANDS.—I consider that the Secretary of State for the Colonies has no alternative but to continue pledges, expressed or implied, which had been given in the past, and I can hold out no hope of the policy in regard to agricultural land in the Highlands being reconsidered.

(4) LOWLANDS.—It was proposed to reserve an area in the lowlands for agricultural immigrants from India. The Committee made it plain that it isaverse from any reservation of land for any immigrant race, subject to the suggestion that before applications for land in lowland areas are invited an opportunity should be taken of sending an officer experienced in Indian settlement and agricultural methods to report on the areas. At present any consideration of the matter is in suspense pending receipt from the colony of reports from the native and agricultural points of view on the areas in question.”

With regard to the announcement in connection with “Lowlands” the question of deputing an officer to examine these areas was considered by the Government of India who thought it inadvisable to proceed any further with the idea.

The work of the Colonies Committee did much to abate the bitterness which existed in the relations between the different classes of settlers in Kenya, and the situation was further improved by the decision of the Indian community to relinquish their attitude of non-co-operation and to select five members for nomination by the Governor to the Legislative Council.

In June 1924, His Majesty's Government announced the appointment of an East African Committee, under the Chairmanship of Lord Southborough, to consider and report on certain questions regarding the administration and economic development of British East African dependencies. Since this enquiry was likely to affect Indian interests, the Government of India urged that the Indian point of view should be heard before the Committee came to any conclusions. This request was granted, but further action in the matter was suspended, pending the publication of the report of the Commission presided over by Major Ormsby Gore, which visited East Africa to enquire into certain aspects of the questions referred to the Southborough Committee. The report of the Ormsby Gore Commission was published in the United Kingdom on May 7th, 1925. On June 9th, Major Ormsby Gore announced in the House of Commons that, in view of the completeness of the report presented by the Commission which, under his chairmanship, had visited East Africa, His Majesty's Government had decided that the Southborough Committee should not resume its sittings.

In November 1926, information reached the Government of India, that the Government of Kenya contemplated undertaking legislation at an early date in order to make the European and Indian communities responsible for the net cost of their education. It was originally intended to give effect to this decision by levying from Europeans a tax on domestic servants in their employ and from Indians a poll-tax. The Indian community resented this differentiation and, ultimately, the Colonial Government decided that both communities should pay the same form of tax, *viz.*, an adult poll tax. For Europeans this has been fixed at 30 shillings and for Indians at 20 shillings. An Ordinance giving effect to this decision was passed by the Kenya Legislative Council and came into force from 1st January, 1927.

In view of the issue of another White Paper in July 1927, in which it was announced that His Majesty's Government had authorised the Secretary of State for the Colonies to send to Africa a special Commission to investigate the possibility of securing more effective co-operation between the Governments of Eastern and Central African Dependencies and make recommendations on this and cognate matters, the question regarding the position of Indians in Kenya again came to the forefront.

In March 1929, the Secretary of State for the Colonies sent out Sir Samuel Wilson, Under Secretary of State for the Colonies, to East Africa to discuss the recommendations of the Hilton Young Commission for the closer union of Kenya, Tanganyika and Uganda (and such possible modification of these proposals for effecting the object in view as may appear desirable) with the Governments concerned and also with any bodies or individuals representing the various interests and communities affected, with a view to seeing how far it may be possible to find a basis of general agreement. Sir Samuel was also directed to ascertain on what lines a scheme for closer union would be administratively workable and otherwise acceptable and to report the outcome of his consultations. At the invita-

tion of the Secretary of State for the Colonies, the Government of India deputed the Rt. Hon. V. S. Srinivasa Sastri, P.C., to East Africa to help the local Indian communities to state their views to Sir Samuel Wilson on matters arising out of the Hilton Young Commission's Report and to be at Sir Samuel Wilson's disposal, if he wished to make use of him in dealing with the Indian deputations.

Mr. Sastri left India in April and returned in June 1929. In the Report presented by him on his return he recommended that the Government of India should—

- (a) press for inquiries as to the basis of a civilisation franchise which shall be common to all races alike;
- (b) invoke the good offices of the Colonial Office and of the Government of Kenya in securing the consent of the European Community to the establishment of a common roll;
- (c) oppose the grant of responsible government to Kenya or of any institutions leading up to it;
- (d) oppose the establishment of a Central Council on the lines proposed by Sir Samuel Wilson;
- (e) demand, in case of the establishment of some such body that the unofficial representatives from each province should include an adequate number of Indians;
- (f) advocate the continuance of the official majority in the Legislative Council of Kenya;
- (g) demand that the representation of natives in the Kenya Legislative Council should be by natives or by Europeans and Indians in equal proportions.

Thereafter meetings of the Standing Emigration Committee were held and the decision arrived at by the Government of India was communicated to His Majesty's Government.

The report of Sir Samuel Wilson was published on the 5th October 1929. Another meeting of the Standing Emigration Committee was held soon thereafter to consider the report and a further communication was addressed to His Majesty's Government on the subject.

The conclusions of His Majesty's Government as regards closer union in East Africa were published in June, 1930, in the form of a White Paper and it was announced that they would be submitted to a Joint Committee of the two Houses of Parliament. In accordance with this decision a Select Committee was set up in November, 1930. The Government of India communicated their views in a despatch to the Secretary of State for India on the scheme set out in the White Paper in so far as it affected the Indian population in East Africa. With the permission of the Joint Select Committee of Parliament they also deputed the Right Honourable V. S. Srinivasa Sastri, P.C., C.H., as their representative to present their case and elucidate in the course of oral examination such questions as the Committee might consider necessary to refer to him. The Select Committee examined Mr. Sastri in July, 1931.

The report of the Committee was published simultaneously in England, East Africa and India on the 2nd November, 1931, and the decisions of His Majesty's Government on the recommendations of the Committee together with certain correspondence arising from the report of the Committee were also similarly published on the 24th August, 1932.

As regards the question of *Closer Union*, His Majesty's Government have accepted the view of the Joint Committee that apart from considerations arising out of the Mandatory position of the Tanganyika Territory, the time has not arrived for taking any far-reaching step in the direction of the formal Union of the several East African Dependencies.

(3) **Fiji and British Guiana.**—Emigration to Fiji was stopped in 1917, under Rule 16 (B) of the Defence of India (Consolidated) Rules in pursuance of the general policy of stopping recruitment under the indentured system of emigration. With a view to secure, if possible, a renewal of emigration to the Colony, an unofficial mission composed of the Bishop of Polynesia and Mr. Rankine, Receiver-General to the Fiji Government, arrived in India in December 1919, and submitted a scheme of colonisation, which was referred to a committee of the Imperial Legislative Council on 4th February, 1920. To secure a favourable reception for the mission the Fiji Government cancelled all outstanding indentures of East Indian labourers from 2nd January, 1920, and also announced their intention to take early measures to provide for the representation of the Indian community on the Legislative Council on an elective basis by two members. In accordance with the recommendations made by the Committee the Government of India informed the mission in March, 1920, that they would be willing to send a Committee to Fiji provided that the Government of Fiji and the Secretary of State for the Colonies would guarantee that "the position of the emigrants in their new home will in all respects be equal to that of any other class of His Majesty's subjects resident in Fiji." In July, 1920, the Government of Fiji informed the Secretary of State for the Colonies of their willingness to give the pledge, subject to his approval. Arrangements with regard to the contemplated deputation, however, were postponed until January 1921, owing to the announcement of Lord Milner's policy in regard to Indians in Kenya, and the desirability of consulting the new Legislature in India. After consultation with the Fiji Government as to the terms of reference and personnel of the deputation, an announcement was made on the 27th June, 1921. But owing to the inability of the two Indian members Messrs. Srinivasa Sastri and Hirdaynath Kunzru, who had been nominated to join the Committee which as finally constituted consisted of Messrs. Venkatapati Raju, G. L. Corbett, Govind Sahai Sharma, and Lieutenant S. Hissam-ud-din Khan did not reach Fiji until the end of January 1922.

The labour troubles in Fiji in the years 1920-21 had produced an unexpected result in India. The Government of Fiji cancelled the indentures of Indian labourers, as from January 1920, while arrangements were made for the early repatriation of such of them as desired to return to

their own country. In consequence, large numbers left Fiji. Many arrived in India comparatively destitute; while others, who were colonial born or whose long residence in the colonies had rendered them unfit for the old social conditions, found themselves utterly out of place—indeed foreigners—in their own country. Returned emigrants from other colonies also, being in difficulties owing to the unfavourable economic situation in India, strongly desired to return to the territories from which they had come. During the early part of 1921, from all parts of India there was a steady drift of destitute and distressed labourers in the direction of Calcutta where they hoped to find ships to take them back to the colonies in which they were certain of work and livelihood. At the earnest representation of the Fiji Government, and after full consultation with representative public men, arrangements were made to relax the emigration restriction in favour of those Indians who were born and had property in any colony, as well as of such near relations as they desired to take with them. Admirable work was done among these distressed persons by the Emigrants' Friendly Service Committee which had been formed primarily to deal with the applications of repatriated Indians desirous of returning to Fiji. The Government of India gave discretion to this Committee to permit persons who could prove that they had been in Fiji to return there if they so desired. The local labour conditions stimulated the return of these unfortunate people by giving them assisted passages. The Legislative Assembly had made a grant of £1,000 for the maintenance of these labourers, until such time as they were able to find work and settle down in India. The deputation from India left Fiji on the 3rd April, 1922, and submitted its report to the Government of India. It has not been published.

In February, 1920, Letters Patent under which the constitution of the Fiji Legislative Council was revised were issued. Provision was made, *inter alia*, for the election of three Indian members on a communal basis. On the 4th November, 1920, one of the Indian members moved a resolution recommending the adoption of a common electoral roll in place of the existing communal one. The resolution was supported by the three Indian members and opposed by the rest of the Council including the elected European and nominated Fijian members. As a protest against this vote, all three Indian members resigned their seats and, no Indian having subsequently offered himself for election, the seats remained unfilled throughout the life of the Council. A fresh election was held during 1922 and as a result two Indian constituencies returned their representatives to the Council, but no candidate offered himself for election from the third constituency. Two subsequently elected members also withdrew from the Council owing to the decision of the Secretary of State for the Colonies that the introduction of a common electoral roll in Fiji is impracticable at present. This is still the position. The issue now is whether the present system of election shall be replaced by nomination and on that the Government of India have made representations, but no decision has yet been announced by the Colonial Office.

British Guiana.—The Indian population in this colony belong almost entirely to the labouring classes and their grievances are mainly economic. Towards the end of 1919, a deputation consisting of the Hon'ble Dr. J. J. Numan, Attorney-General, and Mr. J. A. Luekhoo, a prominent Indian who was a member of the combined court, visited India to put forward a scheme for the colonisation of British Guiana by means of emigration from India. This was examined by a Committee of the Indian Legislature, which advised that a deputation be sent from India to investigate conditions on the spot. Owing to certain unforeseen circumstances it was not found possible to proceed with the proposal until 1922, when a deputation consisting of Messrs. Pillai, Keatinge and Tivary visited British Guiana. Mr. Keatinge was a former member of the Indian Civil Service who had retired from the post of Director of Agriculture, Bombay; Diwan Bahadur P. Kesava Pillai was an elected member of the Madras Legislative Council of which he was also Vice-President; and Mr. Tivary was a member of the Servants of India Society who had done considerable amount of Social Welfare Work among the Depressed Classes in the United Provinces. The two reports of the deputation were published on the 21st of January, 1924. Towards the end of the month a deputation from the Colony of British Guiana, consisting of Sir Joseph Numan, Kt., and the Hon. Mr. J. C. Luekhoo, K.O., arrived in India for further discussions. The Standing Emigration Committee of the Indian Legislature eventually reported that while they would be inclined to view with favour the colonisation scheme put forward by the deputation, they would, before making any definite recommendation, like the Government of India to depute an officer to British Guiana to report on certain matters. Kunwar Maharaj Singh, M.A., C.I.E., Bar-at-Law, was deputed for this purpose. He proceeded to that Colony in September 1925. His report was received on February 1st, 1926, and published. He made certain criticisms and suggestions and the whole matter was thus satisfactorily settled. The colonisation scheme has not yet come into operation as the Colonial Government are not in a position at present to afford the cost which it involves.

In March, 1928, following special inquiries by the Colonial Office, reports appeared in the press that a bill had been introduced in the House of Commons empowering His Majesty's Government to alter the constitution of British Guiana by Order in Council. The changes eventually introduced by the British Guiana (Constitution) Order in Council 1928, did not involve any differentiation against Indians and did not in any way infringe the provisions of the special declaratory Ordinance which was passed by the Colonial Government in 1923 and which confers equality of status on all persons of East Indian race resident in the Colony.

(4) **Other Parts of the Empire.**—In Ceylon, Mauritius, and Malaya, the position of Indians has on the whole been satisfactory, and the matters have gone smoothly. The Government of India maintain their own Agents in Ceylon and Malaya. The

question of the fixation of a standard minimum wage for Indian Estate labourers in Ceylon and Malaya has been the subject of negotiations between the Govt. of India and the Colonial Governments ever since the emigration of Indian labour to the Colonies for the purpose of unskilled work was declared lawful in 1923 under the provisions of the Indian Emigration Act, 1922. So far as Ceylon is concerned a settlement satisfactory to the Govt. of India and that of Ceylon has been arrived at, i.e., the standard wage and other outstanding questions affecting the interests of the labourers and the draft legislation to give effect to it was passed by the Ceylon Legislative Council in December 1927 as "Indian Labour Ordinance No. 27 of 1927." The Standard Rates of Wages agreed upon were introduced with effect from the 1st January 1929. In 1931, however, it was decided with the concurrence of the Government of India to reduce these wages by 5 cents for men, 4 cents for women and 3 cents for children by way of readjustment owing to the price of rice issued from estates being fixed at Rs. 4.80 instead of Rs. 6.40 per bushel. In regard to Malaya, Standard Wage Rates which are considered suitable by both the Indian and Malayan Governments have been introduced in certain areas. The rates so fixed were, however, reduced by 20 per cent. with effect from the 5th October 1930 owing to acute depression in the rubber trade. The questions affected by these details have recently received much attention by the Indian and Malay Authorities. The world-wide economic depression has also had repercussions on Indian labourers employed on tea and rubber estates in Ceylon. Wages have had to be reduced, but the Government of India have, with the co-operation of the Colonial Government, successfully prevented such reduction from materially affecting the labourers' standard of living. For those who are unwilling to work on reduced wages facilities for repatriation to their homes in India have been secured. The position in both the countries is being watched by the Government of India, through their Agents.

The Zanzibar Government recently passed legislation for the economic assistance of their people which caused great difficulty to their Indian population and this was the subject of negotiation. His Majesty's Government have sent out Mr. Binder to inquire in to the new legislation and to recommend what modifications, if any, in it are desirable. He sailed from England in the fourth week of April, 1926, and at the time these details were written was engaged in his inquiries.

In April 1924, the Government of Mauritius requested that emigration to the Colony might be continued for a further period of one year, but the Government of India in consultation with the Standing Committee on Emigration decided that consideration of the request should await the results of a local investigation. The Government of Mauritius agreed to receive an Officer for the purpose and to give him all facilities; and in December, 1924, an Indian Officer of Government, Kunwar Maharaj Singh, left India to conduct the necessary inquiry.

Kunwar (now Sir) Maharaj Singh's report was published by the Government of India in August 1925. The various recommendations made in the report were commended to the consideration of the Colonial Government.

In February, 1926, the Government of India received a reply from the Colonial Government stating that they accepted the main conclusion formulated by Kunwar Maharaj Singh in regard to the renewal of emigration to Mauritius, *viz.*, that no more unskilled Indian labour should be sent to Mauritius either in the immediate or near future. With regard to Kunwar Maharaj Singh's suggestions relating to other matters of interest to the Indian population now resident in the Island, the Colonial Government expressed their willingness to give effect to several of them.

The present position of Indians in the Dominions is that under the Canadian Dominion Election Act, Indians domiciled in Canada enjoy the federal franchise in eight out of the nine provinces. In New Zealand, Indians enjoy the franchise on the same footing as all other British subjects. In Australia, sub-section (5) of section 39 of the Commonwealth Electoral Act, 1918-24, was amended in 1925, by adding after the word "Asia" the words, "except British India." This measure gives the Commonwealth franchise to subjects of British India at present domiciled in Australia and is the fruition of the hopes held out by the Commonwealth Government to Mr. Sastri on the occasion of his visit to Australia in 1922. As a result of the representations made in London in 1930 informally by the late Sir Muhammad Shafi at the instance of the Government of India to the Prime Minister of Australia, the electoral law of Queensland has also been revised to enfranchise the British Indians resident in that State. It is, therefore, in Western Australia alone that Indians do not enjoy the suffrage in respect of election for the Lower House. By Acts which have recently been passed by the Commonwealth Parliament, British Indians in Australia have been admitted to the benefits of Invalid and Old Age Pensions and Maternity allowances from which they were hitherto excluded as Asiatics. Old Age Pension is payable to men above 65 years of age, or above 60 years, provided such persons are of good character and have resided continuously for at least 20 years. An Invalid Pension is obtainable by persons, who, being above 16 years of age and not in receipt of an Old Age Pension, have whilst in Australia, become permanently incapacitated for work by reason of an accident or by reason of being an invalid or blind, provided they have resided continuously in Australia for at least five years.

Maternity allowance to the amount of £5 is given to a woman of every child to which she gives birth in Australia, provided the child is born alive and the woman is an inhabitant on the Commonwealth or intends to settle there. This Legislation removes the last grievance of the Indian community in Australia which was remediable by the Federal Government.

Indians in Great Britain.

Some seventy years have gone by since the Parsee community, in the persons of the late Dadabhai Naoroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead it has since maintained, though there are both Hindu and Mahomedan business men firmly established there. Nor are the professions unrepresented, for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. The number of the latter, especially Parsees, is considerable. Three Indians (all belonging to the Parsee community) have sat in the House of Commons. Since 1910 four Indians—the late Mr. Ameer Ali, the first Lord Sinha, the late Sir Binode Mitter and Sir Dinsha Mulla—have served on the Judicial Committee of the Privy Council. Three Indians are on the Secretary of State's Council. In 1919, the late Lord Sinha was the first Indian to be raised to the peerage and to be appointed a member of the Home Government. In the spring of 1923 Mr. (now Sir) Dadiba Dalal was appointed High Commissioner for India being the first Indian to hold the office. He resigned towards the end of 1924 to be succeeded by Sir Atul Chatterjee, who in 1931 was followed by Sir B. N. Mitra. The early years of the present century saw the gathering of a new Indian element in permanent residence—that of retired officials and business men, or people of independent means who from preference or in order to have their children educated in England, leave the land of their birth and seldom if ever visit it again. Further the stream of Indian summer visitors includes wealthy people who come regularly.

Sectionally, the only Indian community to be fully organised is that of the Parsis. They have an incorporated and well-endowed Parsi Association of Europe. Its central Zoroastrian House, 11, Russell Road, West Kensington, opened in 1920, includes a room devoted to ritual and ceremonial purposes, a reading room and library, and rooms for social intercourse. The Arya Bhawan, a home for orthodox Hindus visiting London, was opened at 30, Belsize Park, Hampstead, in the summer of 1928. Indian business interests have been organised by the formation of the Indian Chamber of Commerce in Great Britain, with offices at 85, Gracechurch Street, E. C. 3. The East India Association (3 Victoria Street S. W. 1), established in 1867, provides a non-partisan platform for the discussion of Indian problems, and exists "to promote the welfare of the inhabitants of India." The India League (146, Strand, W. C.) under the chairmanship of Mr. Bertrand Russell exists "to support the claim of India for Swaraj (Self-Rule)". At the other end of the scale in Indian political

controversy is the Indian Empire Society, 128, Alfred Place, South Kensington S. W. 7, with Lord Sumner as President and Field-Marshal Sir Claude Jacob as Chairman of the Executive Committee.

India House.

In March, 1930, the office of the High Commissioner for India was transferred from the inadequate premises in Grosvenor Gardens to the new India House in Aldwych, erected and furnished at a cost of £324,000. The design of this noble building, which has a frontage of about 130 ft. opposite the Waldorf Hotel, was the work of Sir Herbert Baker, A.R.A., with Dr. Oscar Faber as consulting engineer. Although expression of the Indian character of the building is mainly found in the interior, the architect has given to the details of the external elevation, by means of carving, heraldry, and symbolism an individuality that proclaims it the London house of India. Including basement and mezzanine floors, there are twelve floors in all, the available space for clerical work alone being between 50,000 and 60,000 ft. The total height from the lower level in the courtyard on the Strand side to the roof is about 100 ft.

On the ground floor there is a great hall for exhibits of the products and art wares of India. This hall is carried up two floors, the upper floor being represented by a wide gallery, and on either side of the exhibition hall there are recesses after the style of an Indian bazaar for special exhibits. From the octagonal entrance hall a great public staircase leads to a gallery round the octagonal hall on the first floor. This gallery in its turn leads to a high vaulted library and reception rooms, and the central portion of the library provides accommodation for large receptions on special occasions.

The staircase, exhibition hall, octagonal hall and library markedly express the Indian character of the building. The walls of the staircase and the halls are of red stone similar in appearance to the Agra and Delhi sandstone, carved and pierced in the geometrical patterns of the *jali* in Indian architecture. Such of the carving as could be completely separated from the structure was actually worked at New Delhi by Indian workmen from Makara marble. The use throughout of Indian hardwoods, chiefly gurgan, for flooring obviates the need for any floor covering. From basement to roof scarcely any wood of non-Indian origin was employed. For panelling and decorative purposes in all parts of the great building silver gray, koko, laurel and the beautiful dark red padouk have been used. The domes and vaults of the building have been embellished by mural

paintings, the work of specially selected Indian artists. The water supply is entirely independent of municipal service, being obtained from two artesian wells sunk some 460 ft. below the basement, where the central heating apparatus is installed.

The Indian Trade Commissioner and his staff are at India House, with all other departments of the Office of the High Commissioner excepting the Stores Department which is at the depot off the Thames at Belvedere Road, Lambeth.

The Students.

Under normal conditions it is the student community which constitutes the greatly preponderating Indian element and creates a constant problem. Its numbers multiplied ten or twelve fold in the quarter of a century before the war. After a very considerable temporary check caused by the Great War the number rapidly expanded from 1919 in spite of pressure on college accommodation. In addition to the ordinary graduate or under-graduate student, there are some youths of good family, including heirs of Indian States, admitted into our public schools, such as Eton and Harrow. There are some 500 Indians at the Inns of Court. Since the war there has been a welcome increase in the number of technical and industrial students. Altogether including technical and medical students, there are fully 2,000 young Indians (some five per cent. of them women) in London, Edinburgh, Cambridge, Oxford, Glasgow, Manchester, Birmingham, Leeds, Sheffield, Liverpool and a few other centres. London absorbs about half the total.

The Advisers.

It is well known that for many years ago Indian students were left to their own devices apart from inadequately supported unofficial effort and the chance of coming under the influence of English friends of their families. But in April 1909 Lord Morley created for their benefit a Bureau of Information and appointed the late Sir Thomas Arnold to the charge of it under the title of Educational Adviser. The Bureau was located at 21, Cromwell Road, together with the National Indian Association and the Northbrook Society, which were thus given spacious quarter for their social work among the young men. In India the provincial advisory committees to help and advise intending students have been replaced in some instances by University Committees. The work of the Bureau rapidly expanded, and in consequence Lord Crewe in 1912 re-organised the arrangement under the general charge of a Secretary for Indian students, Mr. (now Sir) O. E. Mallet who resigned at the close of 1916. He was succeeded by Dr. Arnold under the designation of Educational Adviser for Indian Students to the Secretary of State. Mr. N. C. Sen followed Sir T. Arnold as Local Adviser in London. At Oxford the Oriental Delegacy, and at Cambridge the Inter-Collegiate Committee have been instituted to deal with Oriental students generally; whilst Local Advisers for Indian students have been appointed at Manchester, Edinburgh and Glasgow.

These arrangements underwent far-reaching revision in the autumn of 1920 in connection with the setting up, under the Act of the previous year of a High Commissioner for India in the United Kingdom. The "agency work" Sir William Meyer took over from the Secretary of State included that connected with Indian students. Sir Thomas Arnold accepted an appointment long pressed upon him as Professor of Arabic at the School of Oriental Studies, and the High Commissioner appointed Mr. N. C. Sen and Dr. Thomas Quayle as Joint Secretaries for the Education Department. The administrative work hitherto divided between the India Office and 21, Cromwell Road, was consolidated at the offices of the High Commissioner, thereby obviating a good deal of duplication of files and papers. Dr. Quayle is now Secretary in the Education Department of the Office of the High Commissioner and is assisted by Messrs. P. K. Dutt, R. M. J. Knaster and V. I. Gaster with Miss C. H. Bose to look after women students.

The whole situation was investigated by a committee of inquiry which sat in 1921 under the chairmanship of Lord Lytton. Arrangements had been made for the Committee to continue their investigations in India in the cold weather of 1921-22, but were abandoned in consequence of the refusal of the Legislative Assembly to vote the necessary grant. This largely accounts for the somewhat tentative form of the recommendations of the unanimous report published in October 1922. This opinion was expressed that the only permanent solution of the problem is to be found in the development of education in India. Attention was invited to the diminution of the number of Indian students proceeding abroad that would result from giving effect to recommendations made for such development by previous commissions, and by the establishment of an Indian Bar. The Committee held that it should be possible to secure admission both to British universities and, subject to certain reservations, to the works of manufacturing firms in Great Britain for all Indian students competent to profit by the facilities afforded, provided that some machinery existed to ensure their distribution to the places best suited to their requirements. Subsequently a committee presided over by Sir Edward Chamber recommended the creation of Indian Bars, which should have the effect of much reducing the number of Indians going to the Inns of Court. An Act for the purpose was passed by the Indian Legislature in 1926, but has not narrowed the stream of students at the Inns-of-Court.

The students have hosts of non-official friends and helpers and the report suggested that there should be a conference of representatives of all organisations interested in the social and intellectual welfare of young Indians in Great Britain to discuss the best means for co-ordinating their efforts. Accordingly Sir Atul Chatterjee held a conference in July 1925, when plans were formulated to help to meet the needs of students more particularly in respect to suitable boarding accommodation in London. The subject had been previously discussed at a meeting of the East India Association (April 27

1925) when a paper was read by Mr. F. H. Brown. The conference came to the conclusion that, since non-official effort admittedly does not meet the need fully the hostel and club at 21, Cromwell-Road, should be maintained, more particularly to provide accommodation for new comers. A small committee with Mr. A. D. Bonarjee (Warden of 21, Cromwell-Road) as Secretary was established to assist students in obtaining suitable accommodation. But at the end of 1935 it was decided to close the hostel in Cromwell Road from midsummer 1936.

Under the presidency of Lord Hawke an Indian Gymkhana Club in 1921 acquired its own sports ground at Osterley, the total cost of purchase and equipment being estimated at £15,000. Generous gifts were made by some Entling Princes and others, particularly the Maharaja of Patiala, but further help is required. The cricket eleven of the Club has an excellent record in matches at Lords and the Oval and with suburban clubs.

A notable development of 1920 was the opening of the "Red Triangle" Shakespeare Hut in Bloomsbury, off Gower Street, as a union and hostel for Indian and Ceylonese

students up to the number of 500. The hostel was removed to permanent premises 106-112, Gower-Street, close to University College in the autumn of 1923. It is Indian both in conception and control, the warden and committee being responsible not to the National Council of Y. M. C. A. in London but to the Indian National Council in Calcutta. While the organization has a definitely moral and spiritual, as well as a social purpose, it is not a proselytising agency. There is a steady average of some 550 members, and the hostel is exceptionally fortunate in securing the voluntary services of men and women of great distinction in many fields for the regular Sunday afternoon and other lectures. The Indian Students Central Association had a Club house and restaurant at 2 Beauford-Gardens, S. W. 3, but has ceased to exist: a fate which overtakes many short-lived organisations in relation to India.

There has been some recent development in the matter of periodical literature devoted to India. The weekly *Near East and India* is well known; the fortnightly *Indian Review* is the organ of the India League and the monthly *Indian Empire Review* that of the Indian Empire Society.

SOCIETIES AND INSTITUTIONS IN LONDON CONNECTED WITH INDIA

ANGLO-INDIAN ASSOCIATION, LONDON.—

Established in 1905 to promote the interests and welfare of the Anglo-Indian and Domiciled European communities wherever resident by such means as may be deemed by the Council to be desirable. Anglo-Indians and Europeans, whether domiciled in India or not, are eligible. Hon. Sec. E. C. Palmer, 6, Coolhurst Road, London, N. 8.

BRITISH INDIAN UNION.—Promotes friendship

and understanding between the two races. Hon. Secretary: R. S. Nehra. 112, Seymour Place, W. 1.

CENTRAL HINDU SOCIETY OF GREAT BRITAIN.—

Founded to give exposition to Hindu philosophy and culture, to provide for better mutual understanding between Hindus and the British public, and to further the social, economic and political interests of the Hindus in general. President: R. S. Nehra. Hon. Sec. Dr. M. L. Kalra, 36, Barrington Road, S. W. 7.

CHIEF PUNJAB ASSOCIATION.—Founded 1925

to achieve for India a position of honour in the British Commonwealth of Nations; to promote better understanding between India and Great Britain; to bring about unity between the sister Communities of India; and to raise the standard of living of the people of India. President: Sirdar Hardit Singh. Secretary: M. H. Rashid, 445, Strand, W. C. 2.

EAST INDIA ASSOCIATION.—Its object is to promote, by all legitimate means, the welfare of the inhabitants of India generally. The objects and policy of the Association are promoted—(1) by providing opportunities for the free public discussion, in a loyal and temperate spirit, of important questions

affecting India; (2) by promoting friendly social contact between Indians and English men interested in India, partly through the medium of social gatherings and private meetings of members to exchange views on current Indian questions; (3) by lectures and the publication of papers or leaflets correcting erroneous or misleading statements about India and its administration; and (4) generally by the promulgation of sound and trustworthy information regarding the many weighty problems which confront the Administrations in India, so that the public may be able to obtain in a cheap and popular form a correct knowledge of Indian affairs. President: Lord Lamington. Chairman: Sir Malcolm Seton, K.C.B. Hon. Secretary: F. H. Brown, C.I.E., 3, Victoria Street, S. W. 1.

INDIA DEFENCE LEAGUE.—Formed to oppose the proposed Constitutional Reforms in India and to preserve Britain's status as an equal partner in the future development of our Indian Empire. President: The Viscount Fitzalan of Derwent, K.G., Chief Organiser: Captain H. Orr-Ewing, Hon. Secretary: Mr. P. W. Donner, M.P., address: King's Court, 48, Broadway, Westminster, S.W. 1; Tel. Victoria 5635. East India Branch, 8, Clyde Street, Calcutta.

INDIAN EMPIRE SOCIETY.—Reorganised since the passing of the India Act to collect and disseminate information as to events in India. Hon. Secretary: Sir Louis Stuart, C.I.E., 48, Broadway, S.W. 1.

THE INDIA SOCIETY (ART AND LETTERS)—Founded in 1910 to promote the study and appreciation of Indian art and literature, in India and also in those countries which have been influenced by or have influenced India especially Java, Siam, Indo-china, Afghanistan,

Persia and the Middle East. *President*: The Marquis of Zetland. *Chairman of Council*, Sir Francis Younghusband, K.C.S.I. *Vice-Chairman*: John de La Valette. *Hon. Secretary*: F. J. P. Richter, M.A. 3 Victoria Street, London, S.W. 1.

INDIAN STUDENTS UNION AND HOSTEL.—112, Gower Street, W. C. 1. *Chairman*: Sir Ewart Greaves. *Warden*: T. D. Santwan, B.Sc.

INDIA LEAGUE, THE.—(Formerly The Commonwealth of India League) to support the claim of India for Swaraj (Self-Rule). Publishes *India to-day* (monthly). 165, Strand, W. C. 2. *Chairman*: Bertrand Russell. *Secretaries*: James Marley and V. K. Krishna Menon.

INDIAN CONCILIATION GROUP.—(Meeting at Friends House, Euston Road, N. W. 1). *Chairman*: Carl Heath. *Secretary*: Agatha Harrison, 2 Cranbourne Court, Albert Bridge Road, S. W. 11.

INDIAN VILLAGE WELFARE ASSOCIATION.—4 Great Smith Street, S.W. 1. (To collect information on rural activities in India and to promote and arouse interest in rural reconstruction). *Chairman*: Sir Francis Younghusband, K.C.S.I. *Hon. Secretary*: Miss A. R. Caton.

INDIAN GYMKHANA CLUB.—Thornbury Avenue, Osterley. To promote the physical well-being of Indian students. *Secretary*: Mr. David S. Erulkar, "Africa House," 44-46, Leadenhall Street, London, E.C. 3.

MUSLIM SOCIETY IN GREAT BRITAIN.—Formed to safeguard and to maintain the interests of Islam and Islamic institutions. *President*: T. W. Salim Babonau. *Secretary*: Ahmed Bennett. Headquarters. 451, Great Russell Street, London, W.C.1.

NATIONAL INDIAN ASSOCIATION.—Chief aims to promote the welfare of Indian students. 21, Cromwell Road, S.W. 7. *Secretary*: Miss Dove.

NORTHBROOK SOCIETY.—Makes grants to deserv- ing Indian students. 21, Cromwell Road, S.W. 7. *Hon. Secretary*: E. Oliver.

PARSEE ASSOCIATION OF EUROPE INCORPORATED.—Zoroastrian House, 11, Russell Road, Kensington, London, W. 14.

ROYAL ASIATIC SOCIETY.—Established 1823, obtained Royal Charter 1824, "for the investigation of subjects connected with and for the encouragement of Science, Literature, and the Arts in relation to Asia". *Secretary*: Col. D. M. F. Hoysted, C.B.E., D.S.O. 74, Grosvenor Street, London, W. 1.

ROYAL CENTRAL ASIAN SOCIETY.—*President*: Field Marshal Viscount Allenby, G.C.B., G.C.M.G., G.C.V.O. *Chairman*: The Rt. Hon. Sir. Horace Rumbold, Bt., G.C.B., G.C.M.G. *Secretary*: Miss M. N. Kennedy, 77, Grosvenor Street, London, W.1.

ROYAL EMPIRE SOCIETY.—Formerly Royal Colonial Institute, Northumberland Avenue, W.C. 2. *Secretary*: R. E. H. Baily, C.B.E., address during re-building:—17, Carlton House Terrace, W.1. 2.

ROYAL SOCIETY OF ARTS has an Indian section before which lectures are delivered on industrial, historical and commercial questions. 18, John Street, Adelphi, W.C. 2. *Secretary*: W. Perry, M.A.; *Secretary, Indian Section*: K. W. Luckhurst, M.A.

ROYAL INSTITUTE OF INTERNATIONAL AFFAIRS, Chatham House, 10, St. James' Square, S. W. 1. *Secretary*: Ivison S. Macadam, C.B.E.

SOCIETY FOR PROMOTING THE STUDY OF RELIGIONS.—*President*: The Rt. Hon. the Marquess of Zetland, P.C., G.C.S.I., G.C.I.F. *Chairman of Council*: Sir E. Denison Ross, C.I.E. P.H.F. *Chairman of Executive Committee*: Sir Francis Younghusband, K.C.S.I., K.C.I.E. Information from the *Hon. Secretary*, 17, Bedford Square, W.C. 1.

STUDENT CHRISTIAN MOVEMENT OF GREAT BRITAIN AND IRELAND.—*Secretary*: R. C. Mackie, Annandale, North End Road, Golders Green, N. W. 11.

VICTORIA LEAGUE.—81, Cromwell Road, S.W. 7. *Secretary*: Miss Gertrude Drayton, C.B.E.

WOMEN'S INDIAN ASSOCIATION London Committee. *Hon. Secretary*: Miss Avabai Mehta, M.L.B. (London), Barrister-at-Law. 171, Adelaide Road, N.W. 3.

Sport.

Sport in India during the year under review received a fillip by the visit of the Maharaja of Patiala's team of Australian cricketers, and the team of tennis players from Central Europe. India is rapidly becoming sports-minded. The Press is allotting much more space to reports of the chief sporting events, and throughout the country the attendance at the big tournaments and competitions in all branches of sport have shown a decided increase.

Racing, of course, still claims pride of place and the huge crowds which swarm on the race-courses of Bombay, Calcutta, Madras and other parts of the country prove that the Indian is as keen on "the sport of kings" as the man in any other part of the world. The chief events are the Viceroy's and the King-Emperor's Cups in Calcutta and the Eclipse Stakes in Bombay.

The King Emperor's Cup was this year won by Messrs. A and A. J. Hoyt's Play On, ridden by the younger Hoyt (C. Hoyt), this victory thus being a regular family affair. Play On was beaten into third place in the race for the Viceroy's Cup by Nawab of Bhopal's Mas d'Antibes, a horse he had beaten in the King-Emperor's Cup. The Eclipse Stakes in Bombay, the richest race in India, was also won by Play On—the second time this horse has won this race.

Cricketers tested.

The visit of the Australian cricketers aroused considerable interest. The visit served the purpose of testing Indian cricket talent, which was particularly useful in view of the tour to England in the summer of 1936. The Australians included many players of reputation—Macartney, Ryder, Hendry, Oxonham, Ironmonger and Ellis, all having been proved in the fire of Test match battles with England. It was only natural, therefore, that wherever this team played that large crowds should turn up to watch them. The tourists proved, on the whole, too strong for the majority of India's sides although the last two unofficial Tests were won by the Indian team.

The cricket season unfortunately was marred by internal strife centred on the nomination of the captain for the Indian eleven to meet the Australian visitors, and this had an unfortunate repercussion when the team to tour England was elected, the Yuvaraj of Patiala refusing to be nominated either as the probable captain or as a member of the side.

The tennis team consisted of R. Menzel of Czechoslovakia, Count Bowroski of Austria, C. Von Mexia also of Austria, and L. Hecht of Czechoslovakia. The tennis players were too good for India's best, but their visit gave India's premier players an opportunity of playing against first class European players.

A hockey record.

In the hockey world the Bombay Customs made hockey history by winning the Aga Khan and Beignton Cups, the two premier tournaments in the country in the same season—a feat never before accomplished. They proved themselves to be the best club side in India although singularly enough they have not a single player in the team which will represent India at the 1936 Olympic games.

Matters did not run smoothly in the football world. The All-India Football Association came into being, but at the time of writing, the Indian Football Association whose headquarters is in Bengal, have not affiliated to the new body, and the unfortunate split which occurred over the meeting at Darbhanga has not yet been healed. The East Yorkshire Regiment won the I. F. A. Shield and the King's Regiment the Rovers Cup and the Border Regiment the Durand Cup.

Rugby was played as usual during the monsoon and the All-India tournament was won by Ceylon who beat Bombay in the final.

The golf champion of India this year turned out to be Mr. A. Glennie who beat Mr. F. A. Bagley by 9 to 7 in the final. The ladies' championship was won by Mrs. A. A. Marr who beat Mrs. F. A. Scott by 5 to 4 in the final.

The Indian Polo Association championship at Calcutta was won by Jaipur who beat Kashmir in the final.

Athletics revive.

Athletics received a big fillip by the holding of Olympic Games in Bombay in commemoration of the late King George's Silver Jubilee and the final Olympic trials at Lahore. Bombay, particularly in athletics, showed a welcome revival and the future should see further development on field and track. The All-India Games at Lahore were very successful although there were not many individual performances up to international Olympic standards. As a result, however, India will probably send at least three athletes to Berlin. C. S. A. Swami, the Bombay athlete, promises to become a Marathon discovery.

Capt. Tuck, R. A. also made history by winning the Kadir Cup for Pig-sticking at Meerut on Manifest, this being the third time this fine pig-sticker has won that trophy.

Sport is rapidly becoming more organised throughout the country and there are now central governing bodies for practically every branch of it. The Indian Cricket Board has done an immense amount of good for cricket and with the inauguration of the Cricket stadium in Bombay in the coming year cricket in that city should maintain the premier place it has always held in the country.

Detailed results of the chief sporting events throughout India will be found on the following pages.

Racing.

Bangalore.

Bangalore Cup (Div. I). Distance 1 mile.—
Messrs. Lalvani and Mukham's Solar Barn
(7st. 10lbs.), Davison .. 1

Brigadier Hill, Sir Cusrow Wadia and
Messrs. Johnstone and Tosh's Gold Period
(7st. 2lbs., cd. 7st. 3lbs.), J. P. Neale .. 2

Mr. Annamalaichettiar's Solingen (7st.
8lbs.), Whittle .. 3

Sir D'Arcy Lindsay's Sole Heiress (7st.
4lbs.), H. Black .. 4

Won by 1 length, 2 lengths, a neck.
Time—1min. 44 1-5 secs.

Bangalore Cup (Div. II). Distance 1 mile.—
Mr. M. Wemyss's Whanait (8st.),
Meekings .. 1

Mr. J. Hormusjee's It (7st. 10lbs.),
Davison .. 2

Messrs. Nugent Grant and W. C. Jones's
Mellilot (7st. 8lbs.), H. Black .. 3

Mrs. A. H. C. Rostrom's Graydon (7st.
10lbs.), Flynn .. 4

Won by $\frac{1}{2}$ length, $1\frac{1}{2}$ lengths, $1\frac{1}{2}$ lengths.
Time—1 min. 45 secs.

Steward's Cup. Distance 1 mile.—
Mr. K. T. Sampat's Azdashir (8st. 10lbs.),
H. McQuade .. 1

Mr. A. C. Ardeshir's Aziza (7st. 12lbs.),
Raffaele .. 2

Mr. I. S. Shemtob's Taj Kasma (9st. 4lbs.),
Brace .. 3

Miss V. Parker's Hitler (8st. 5lbs.),
Thompson .. 4

Won by a head, 1 length, $1\frac{1}{2}$ lengths.
Time—1min. 54 1-5 secs.

Bobbili Cup. Distance 1 mile.—
Mr. Gem's Achieve (9st. 4lbs.), Brace .. 1

Mr. S. Khanna's Wallridge (7st. 3lbs.),
Holland .. 2

Raja Parlakimedi's Miss Winsome (7st.
1lb.), Moore .. 3

Mrs. John Yorke's Tree Top (8st. 11lbs.),
Meekings .. 4

Won by $3\frac{1}{2}$ lengths, 1 length, a short head.
Time—1min. 44 1-5 secs.

Madras Cup. Distance 6 furlongs.—
Mr. V. L. Govindraj and Capt. D'Arcy's
Snow Leopard (8st. 5 lbs.), Meekings .. 1

Lt.-Col. Sir the Maharaja of Venkatagiri's
Laden La (8st. 13lbs.), Forsyth .. 2

Mr. J. Hormusji's It (9st. 10lbs.), Brace .. 3

The Raja of Parlakimedi's Flinty (9st.
3lbs.), Sibbritt .. 4

AIR RACE.

New Delhi.

Viceroy's Challenge Trophy and Rs. 7,000.—
Distance 1,520 miles. Madras to New Delhi.

THE RESULTS.

- *1. Lieut. Misri Chand arrived at 16-21½; speed 118.5 miles per hour.
2. Mr. G. V. Gadgil arrived at 16-35; speed 114.6 miles per hour.
3. Mr. A. C. Guzdar arrived at 17-09; speed 121.5 miles per hour.
4. Mr. S. K. Dube arrived at 17-41; speed 100 miles per hour.
5. Mr. N. Vincent arrived at 17-42; speed 148.3 miles per hour.
6. Mr. C. E. Gardner arrived at 17-43; speed 124 miles per hour.
7. Sir A. W. McRobert arrived at 17-48; speed 99.3 miles per hour.

*The winner also won the Speedolene Trophy and Rs. 2,000.

8. Capt. A. F. Muir arrived at 18 07; speed 182 miles per hour.

9. Mr. R. Vaughan Fowler arrived at 18-26½; speed 141 miles per hour.

COMPETITORS' PERFORMANCE.

The following are the top speeds at which the competitors were handicapped and the average speed maintained by them on the first day:—

- Mr. Dube 100—96.4.
Mr. Gadgil 106—112.
Sir W. MacRoberts 100—96.2.
Lieut. Misri Chand 106—114.
Mr. A. C. Guzdar 117—114.
Mr. Gardner 125—120.
Mr. Vincent 150—143.5.
Mr. Vaughan Fowler 153—137.
Capt. Muir 172—153.

Thus it is seen that Lieut. Misri Chand and Mr. Gadgil were the only two competitors to maintain a higher speed than that at which they were handicapped.

1. The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non-official community resident in India, who shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se*, according to the date of entry into that number.

3. When an officer holds more than one position in the table, he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5. All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6. All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in case any question shall arise.* When the position of any such person is so determined and notified, it shall be entered in the table in italics, provided he holds an appointment in India.

7. Nothing in the foregoing rules to dispute the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8. The following will take courtesy rank as shown:—

Consuls-General—Immediately after Article 33, which includes Brigadiers; Consuls—Immediately after Article 36 which includes Colonels; Vice-Consuls—Immediately after Article 59, which includes Majors.

Consular officers *de carriere* will in their respective grades take precedence of consular officers who are not *de carriere*.

9. The following may be given, by courtesy, precedence as shown below, provided that they do not hold appointments in India:—

Peers according to their precedence in England; Knights of the Garter, the Thistle, and St. Patrick; Privy Counsellors; Members of the Council of the Secretary of State for India—Immediately after Members of the Governor-General's Executive Council, Article 8.

Baronets of England, Scotland, Ireland, and the United Kingdom according to date of

Patents; Knight Grand Cross of the Bath; Knights Grand Commander of the Star of India; Knights Grand Cross of St. Michael and St. George; Knights Grand Commander of the Indian Empire; Knights Grand Cross of the Royal Victoria Order; Knights Grand Cross of the Order of the British Empire—Immediately after Puisne Judges of High Courts, Article 20.

Knight Commander of the Bath; Knights Commander of the Star of India; Knights Commander of St. Michael and St. George; Knights Commander of the Indian Empire; Knight Commander of the Royal Victoria Order; Knight Commander of the Order of the British Empire; Knights Bachelor—Immediately after the Residents of the 2nd Class Article 23.

10. All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according to the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons; such ladies to take place according to their several ranks, with reference to such precedence in England immediately after the wives of Members of the Governor-General's Executive Council.

* In virtue of the provisions of section 9 (ii) of the Indian Church Act, 1927, a Bishop or Archdeacon who held a bishopric or archdeaconry on the 1st March 1930 takes rank as follows:—

Bishop of Calcutta, Metropolitan of India, immediately after Chief Justice of Bengal, Article 7.
Bishops of Madras and Bombay, immediately after Chief Justice of a High Court other than that of Bengal, Article 12.

Bishops of Lahore, Rangoon, Lucknow and Nagpur, immediately after Chief Commissioner of Delhi, when within his charge, Article 22.

Bishops (not territorial) under license from the Crown, immediately after Chief Secretaries to Governments, other than those of Madras, Bombay, Bengal and Assam, Article 32.

Archdeacons of Calcutta, Madras and Bombay, in Article 33.
Archdeacons of Lahore, Lucknow, Rangoon and Nagpur, in Article 39.

Indian Orders.

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1875, 1876, 1897, 1902, 1911, 1915, 1920 and 1935 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty-six Knights Grand Commanders (24 British and 22 Indian), the second class of one hundred and six Knights Commanders, and the third class of two hundred and thirty-seven Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown; all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colour and pattern as a Knight Grand Commander, and pendant therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears around his neck a badge of the same form as appointed for a Knight Commander, but of a smaller size pendant to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Marquess of Linlithgow, G.M.S.I., G.M.I.E.

Officers of the Order:—*Registrar:* Col. the Hon. Sir George Arthur Charles Crichton, K.C.V.O., Secretary to the Central Chancery of the Orders of Knighthood, St. James' Palace, London, W. 1.

Secretary: The Hon'ble Sir Bertrand Glancy, K.C.I.E., G.S.I., Secretary to the Government of India in the Foreign and Political Department.

Extra Knights Grand Commanders (G. C. S. I.)

H. M. Queen Mary.

H. R. H. The Duke of Connaught.

Honorary Knights Commanders (K. C. S. I.)

His Excellency Shaikh Sir Khaz'al Khan, G.C.I.E., Sardar Aqdas, Shaikh of Muhammad and dependencies.

Prince Ismail Mirza, Motamad-ed-Dowleh Amir-i-Akram, son of His Royal Highness the late Sultan Sir Massoud Mirza, Yenined-Dowleh, Zil-es-Sultan of Persia.

Honorary Colonel Supradipta Manyabar General Sir Baber Shum Shere Jung, Bahadur Rana, G.B.E., K.C.I.E., of Nepalese Army (Nepal).

His Excellency General Sir Padma Shumshere Jung Bahadur Rana, G.B.E., K.C.I.E., Commander-in-Chief, Nepal.

Honorary Companions.

H. H. Saliyd Sir Taimur bin Faisal bin-us- aydi Turki, K.C.I.E., Sultan of Masqat and Oman. Shaikh Hamad bin Isa al Khalifah, s u of the Shaikh of Bahrain.

His Excellency Shaikh Ahmad bin Jabina Sabah, C.I.E., Ruler of Kuwait.

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, December 1877, and extended and enlarged in 1886, 1887, 1892, 1897, 1902, 1911, 1915, 1920 and 1935, is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, forty-two Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and fifty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 54 nominations in any one year), also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Government of India.

The Insignia are: (i) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with chains; (ii) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, and surmounted by an Imperial Crown gold; (iii) The BADGE consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, surmounted by an Imperial Crown, also gold; (iv) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (a) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size; (b) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order.

A Companion wears around his neck a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—H. E. the Viceroy (Marquess of Linlithgow from April 18th, 1935)

Officers of the Order:—The same as for the Order of the Star of India.

The Imperial Order of the Crown of India.

This Order was instituted Jan. 1, 1878, and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous offices in connection with India. Badge, the Royal Cypher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C. I.

Sovereign of the Order.

THE KING-EMPEROR OF INDIA.

 H. H. The Maharani of Bikaner.
 The Lady Stanley.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', 'Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which **miniatures** of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII. and on the reverse a laurel wreath encircling the words *For Distinguished Service*. The medal, $\frac{1}{2}$ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon $\frac{1}{2}$ in. wide, with blue edges $\frac{1}{8}$ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co in 1837, to reward personal bravery without any

reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, $\frac{1}{2}$ in. in diameter, having in the centre a ground of dark-blue enamel bearing crossed swords in gold, within a gold circle, and the inscription *Reward of Valour*, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark-blue ribbon $\frac{1}{2}$ in. in width with red edges, bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army Since 1878, however, any person, European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour. The First Class consists of a gold eight-pointed star $\frac{1}{2}$ in. in diameter. The centre is occupied by a lion *statant guardant* upon a ground of light-blue enamel, within a dark-blue band inscribed *Order of British India*, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{3}{8}$ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $\frac{1}{4}$ in. in diameter with dark-blue enamelled centre: there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title *Sirdar Bahadur*, and an additional allowance of two rupees a day and the Second the title of *Bahadur*, and an extra allowance of one rupee per day.

Indian Meritorious Service Medal.—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal": but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend *Victoria Kaiser-i-Hind*. On the reverse is a wreath of lotus leaves enclosing a wreath or palm tied at the base, having a star beneath, between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word *India*. The medal, $\frac{1}{2}$ in. in diameter, is suspended from a scroll by means of a red ribbon $\frac{1}{2}$ in. wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to *EDWARDVS* or *GEORGIVS*.

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901, 1912 and in 1933—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus, distinguishing such services aforesaid, We have instituted and created, and by these presents for Us, Our Heirs, and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of three classes. The Medal is an oval-shaped Badge or Decoration—in gold for the First Class and in bronze for the Third Class silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India"; it is suspended on the left breast by a dark blue ribbon.

Recipients of the 1st Class.

- Abdul Qaiyum, Khan Bahadur Nawab Sir Sahibzada, K.O.I.E., M.L.A.
 Abdus Samad Khan of Rampur
 Advani, M. S.
 Aiyar, Mrs. Parvati Ammal Chandra Sekhara.

Ministers:

THE HON'BLE NAWAB SIR MUHAMMAD YUSUF, KT.,
Bar-at-Law.

THE HON'BLE SIR JWALA P. SRIVASTAVA, KT., M.Sc., A.M.S.T.

AGAR: SHRIMANT THAKORE SHRI YAVERKHANJI GAM-BHIRKHANJI CHOWAN, the Ruling Chief of Agar, in Gujarat States Agency.

Born : On 19th January 1899.

Succeeded to the Gadi : On the 4th December 1931.

Educated : At the Tulukdari School at Godhra.

The Thakore Saheb is a keen sportsman and has won many prizes and medals. He is also keen on hunting and

has shot many Tigers and Panthers.

Married : To the daughters of the Thakore Sahebs of Nalia and Napad.¹

Origin : The Rulers of the State belong to the Chowan (Pavapati clan) of Rajputs who were later converted to the Mahomadan faith and are now classed as Musalmans.

Total annual income Rs. 50,000.

Area : 17 square miles with 29 Villages.

The Agar State is situated on the Bank of Ashvan River.

The State enjoys Criminal and Civil powers and is under the direct control of the Political Agent, Gujarat States Agency.

Rule of primogeniture is applied to the State.

The nearest railway station is Kaledia (G. B. S. Rly), at a distance of about five miles from the Capital.

The Thakore Saheb has visited many principal cities in India and has two younger brothers.

A KALKOT: SHRIMANT VIJAYASINH FATTESINH BHOSLE, RAJA SAHEB of Akalkot.

Born : 13th December 1915.

Education : Passed the Diploma Examination of the Rajkumar College, Rajkot, attended for some time the Deccan College, Poona, completed his training in administration at Bangalore and made extensive tours in Northern India.

Married : On 23rd February 1934 Princess Kamla Raje (Shanta Devi) of Gwalior but unfortunately Shrimant Shanta Devi Rani Saheb expired on 19th March 1934 at Akalkot.

Area of State : 498 square miles.

Population : 92,605.

Capital town : Akalkot (Sholapur District).

The State for the purpose of administration is divided into a Taluka—Akalkot and two Pethas—Piliw and Kurla. Up to 26th February 1936 owing to minority, the State was administered by the Dowager Rani Saheb Shrimant Tarabai Saheb as Regent with the help of a Government Adviser. Shrimant Vijayasinh Raja Saheb having attained majority, was invested with full powers of administration of the State on 27th February 1936 by the Government of India.

Judicial : An independent High Court Bench established in 1931.

Educational : Primary education free to backward and depressed classes and girls of all castes and creeds. Free Secondary education to girls. Scholarships and freeships in Secondary and Higher education. A separate High School for girls has been newly opened.

Local Self-Government : Municipality at Akalkot and Taluka District Local Board.

General : A New Water Works Scheme costing about Rs. 10.25 lacs is nearing completion. Provision for a bridge on the Bori river has been made in this project. Town-planning and removing congestion in the town is in progress. A Development Scheme has been undertaken.

Dewan : MR. V. B. PARULEKAR, B.A. He is also the District Magistrate and District and Sessions Judge.

Chief Police Officer : RAO BAHADUR S. R. JAGDAL.

State Engineer in charge Akalkot Water Works : MR. B. M. BACHAL, L.C.E.

AUNDH : SHRIMANT BHAVANRAO SHRINIVASRAO *alias* BALASAHEB PANT PRATINIDHI, the Ruler of Aundh, is a graduate of the Bombay University and a treaty Chief. His age is 67 and he is married to Shrimati Saubhagyawati Ramabai Saheb *alias* Maisaheb from the Rode family of Poona.

Heir-Apparent: SHRIMANT BHAGWANTRAO *alias* BAPUSAHEB who is 16 years of age.

Shrimant Pantaheb is alive to the rapid progress going on in the civilized world. A Legislative Assembly was established in the State in 1924. Its strength consists of 39 members with a predominating popular element. A notable feature of the Assembly is that it includes two female members. The Assembly is competent to discuss any subject and pass resolutions without restrictions, while the Annual Budget is passed item by item.

By the Aundh State Act passed in 1931, a Darbar has been formed to run on the administration. It is a miniature Executive council and consists of the Dewan of Aundh and a minister appointed from the elected members of the Legislative Assembly. The Ruler takes considerable interest in Rural Uplift and is making vigorous efforts in that direction.

Shrimant Pantaheb is a keen student of drawing and painting and has edited *Picture Verul*, *Pictorial Ajanta*, *Pictorial Ramayana* and the *Life of Shivaji* in three picture volumes. He also takes great interest in physical exercise and has written in English a book on the subject called "*The Surya Namaskars*," which has become very popular throughout India.

The State possesses an independent High Court. Most of the villages have got Village Panchayats.

BALASINOR: HIS HIGHNESS
NAWAB SAHEB BABI
SHRI JAMIATKHANJI,
BAHADUR, the present Ruler of
Balasinor State, in the Gujarat
Agency.

Born : 10th November 1894.

Ascended the Gadi on 31st
December 1915.

Educated : At the Raj Kumar College, Rajkot, where he achieved the Diploma. Afterwards His Highness joined the Imperial Cadet Corps, Dehra Dun and returned with success. He is allowed to wear the Imperial Cadet Corps uniform. His Highness is a ruler of literary taste and can compose poetry in Urdu and Gujarathi. He is also endowed with the natural gift of composing drama and plays which are well admired in the province of Gujarat.

Married : First with H. H. Begum Saheba Shri Subhan Bakhte Saheba, daughter of the Heir-apparent of Junagadh State, but she died. At present His Highness the Nawab Saheb has three Begum Sahebas : (1) H. H. Shri Sardar Begum Saheba. (2) H. H. Shri Khurshed Begum Saheba. (3) H. H. Shri Zohra Begum Saheba. The senior Begum Saheba, Sardar-Begum Saheba, the daughter of the Thakor Saheb of Kervada, gave birth to a son in 1920, who unfortunately died in infancy. The third Zohra-Begum Saheba has given birth to two daughters.

His Highness the Nawab Saheb comes of a very ancient and well-known Babi Sunni Pathan dynasty. The ancestors of His Highness were the descendants of Sher Khanji Babi, son of Bahadur Khanji Babi, a distinguished officer in the Imperial Service at Delhi, who enjoyed a very high position at the time of the Mughal Emperors. Even to-day the same magnificent position is fully maintained. The Rulers of this clan have been famous not for their kingly pomp, dignity and splendour, but for their luxuriance of benevolence and exuberance of munificence throughout Gujarat and Kathiawar.

Military Force : 60 Cavalry, 177 Infantry and 10 guns.

Permanent Salute : 9 guns. The ruler has been granted a sanad of adoption. He is also a member of the Chamber of Princes in his own right.

Balasinor State is a second class State in the Bombay Presidency with high Civil and Criminal powers.

Area of the State : 189 square miles.

Population : 52,525 in 1931.

BANGANAPALLE : NAWAB MIR FAZLE ALI KHAN BAHADUR, the present Ruler of Banganapalle, the only Muslim State in South India.

Born : 1901.

Installed on the Masnad of his ancestors on the 6th July 1922.

Educated : At St. George Grammar School, Hyderabad, Deccan. The Newington Institution, Madras, and the Mayo College, Ajmer. Passed the Diploma Examination in 1920.

Married : The only daughter of his paternal uncle, Nawab Mir Asad Ali Khan Bahadur, in 1924.

After the death of his first Begam Sahiba in the year 1928, the Nawab Sahib Bahadur re-married in the year 1930, a lady from the family of Nawab Salar Jung Bahadur.

Recreation : Tennis and Billiards.

The Ruler exercises full control over the administration of the State. During the short period of his rule, the present Nawab Sahib Bahadur has given practical proof of his keen interest in every branch of the administration and is striving hard to do everything that can be done for the welfare of his loving subjects. The Nawab Sahib Bahadur is a member of the Chamber of Princes.

Heir-Apparent : NAWAB MIR GHULAM ALI KHAN BAHADUR, born 12th October 1925.

Salute : 9 guns.

Area of the State : 275 square miles.

Population : 40,000.

Population: 2,60,670.

Revenue: Rs. 9 lacs.

Infantry: Prithwi Rifles.

Banswara, the Southernmost State in Rajputana, has been described as the most beautiful portion of Rajputana, especially just after the rains. The principal rivers are the Mahi and the Anas. The State is believed to be rich in minerals, and has been twice surveyed and settled, the last Land Revenue Settlement was made in 1914-1917. The State has many archaeological relics, and considerable fertile soil.

Capital: Banswara of 10,244 population, about 60 miles distant from Ratlam and 64 miles from Dohad on B. B. & C. I. Ry. Dak Bungalow at the Capital.

Administration of the State is conducted by His Highness with the assistance of a Diwan on Political, Foreign and Judicial side, and a Home Minister on the Executive side. Besides, the State has a Judicial and a Legislative Council, of which the Diwan is President.

Agency: Southern Rajputana States Agency.

Diwan: MR. JITENDRA S. MEHTA, B.A., LL.B., Advocate.

Home Minister: MR. NAND LAL BANERJI.

Private Secretary to His Highness: MR. FAUJ MAL KOTHARI.

BARAMBA: RAJA SHREE
NARAYAN CHANDRA
BIRBAR MANGARAJ MAHA-
PATRA, Ruling Chief of Baramba
State, Eastern States Agency.

The State was founded by
Hatakishore Rout in 1305 A.D.
The Present Ruler is the 22nd
descendant of the dynasty.

Born: on the 10th January 1914.

Succeeded to the Gadi: On the
20th August 1922; was formally
installed on the 16th January 1935
when the State was released from
the minority administration of the
Government.

Education: Passed the Chiefs'
College Diploma Examination from
the Raj-Kumar College, Raipur in
1931 and then educated in the
Ewing Christian College, Allahabad.

Married: On the 24th May 1934 to the eldest Princess of late
Rajkumar Dayanidhi Deb and grand-daughter of Sir Basudeb Sudhal
Deb, K.C.I.E., late Raja of Bamra.

General: Compulsory primary education is imparted free through-
out the State to all, irrespective of caste and creed. Several schools have
been opened specially for the low caste people in order to encourage
education of aboriginal classes. There is also a Secondary School
in the State. For higher studies and technical training State stipends
are granted. Madat (prepared opium) and liquor are strictly prohi-
bited in the State. People receive every kind of medical aid free from
two charitable dispensaries maintained by the State.

Forest materials and agricultural produce are the chief exports
from the State. The State is famous for its Maniabandhi cloth which
has a large sale in most parts of Orissa. Home industry such as
weaving, making baskets, ornaments, ivory works and brass wares,
etc., are fostered by the State. Cattle rearing and agriculture are the
main profession of the general masses.

Heir: Jubraj Shree Krishna Chandra Deb: born on the 19th

BAUDH: RAJA NARAYAN PRASAD DEV, the present Ruler of Baudh.

Born: On the 14th March, 1904.

Educated: At the Rajkumar College, Raipur, where he passed the Diploma Examination with brilliant success and distinction heading the list of successful candidates from all the Chiefs' Colleges in India.

Succeeded: On the 10th March 1913 and was installed on the Gadi on the 14th March 1925.

Married: The second sister of the present Ruler of Athmallik State in 1923.

Baudh is an ancient principality founded in the early part of the 11th Century A.D. The rulers of this State belong to the

Solar Race and the present ruler is 43rd in descent from the founder. The Raja Saheb is a very able administrator and a sympathetic Ruler. He is held in high esteem by his subjects and officials alike. All the Political Officers of the British Government who visited the State from time to time left with very high appreciation of the administration. The Raja Saheb was invested with the powers of a Sessions Judge in 1933. He represented the Rulers of Orissa States at the Chamber of Princes from 1929-31 and has again been re-elected this year for another term. There have been vast and marked improvements in all branches of administration during his rule and further improvements are in the offing. There are three fully equipped hospitals in the State and also one veterinary hospital. The present Ruler has established a High School at the Headquarters, two middle schools in the interior and has greatly increased the number of Primary Schools. Numerous buildings have been constructed for State institutions both at Headquarters and in the interior. Construction and improvements of roads and irrigation schemes are in hand. During the minority of the Ruler, the Baudh-Daspalla road joining this State with two Railway heads, Sambalpur in the north and Khordha Road in the South was constructed at considerable expense. In furtherance of quick communications, the construction of telephone lines throughout the State is now in progress.

During the Great War the State and its people stood loyally by the British Government. The total war contributions and subscriptions towards the various funds and loans amounted to Rs. 2,90,385. The Ruler also made liberal contributions towards the Viceroy's Earthquake Funds, Flood Relief Fund, Silver Jubilee Fund, etc., etc.

Area of the State: 1,264 sq. miles. *Population:* 1,35,248.

Annual Income: Rs. 4,50,000.

Post and Telegraph Office: Baudh-Raj.

Railway Station: Sambalpur, (B.N. Ry.)

BHAVNAGAR: HIS HIGHNESS MAHARAJA RAOL SHREE KRISHNA-KUMAR SINHJI, MAHARAJA of Bhavnagar.

Born: 19th May 1912. His Highness is a Gohel Rajput and a direct descendant of Sajakji who is said to have settled in the country about 1260.

Educated: Harrow, England.

Married: In 1931 to Vijiaba Saheba, the 3rd daughter of Yuvaraj Maharaj Kumar Shri Bhojrajji of Gondal. Has two sons.

Succeeded to the Gadi: On the death of his father, Maharaja July 1919. Invested with full

Sir Bhavsinhji, K.C.S.I., on 17th ruling powers on 18th April 1931.

Heir-Apparent: MAHARAJ KUMAR SHRI VEERBHADRASINHJI.

Second Son: MAHARAJ KUMAR SHRI SHIVABHADRASINHJI.

Area of the State: 2,961 square miles.

Average Annual Revenue: Rs. 1,89,22,590.

Population (1931): 500,274.

Chief Products: Grain, Cotton, Sugar Cane and Salt.

The Bhavnagar State Railway is 307 miles in length. The Port of Bhavnagar has a good and safe harbour for shipping.

The noteworthy features in the administration of the State are the entire separation of judicial from executive functions and the decentralisation of authority. The authority and powers of all the heads of Departments are clearly defined and each within his own sphere is independent of the others being directly responsible to the State Council.

STATE COUNCIL.

President: SIR PRABHASHANKAR D. PATTANI, K.C.I.E.

Members:

DIWAN BAHADUR T. K. TRIVEDI.

Singh Sahib of Bhareli, Ambala District, in February 1933.

Salute: 11 guns.

Area of State: 643 square miles.

Population: 1,64,346.

Gross Income: 18 lakhs.

Kanwar Manjit Indar Singh Sahib Bahadur:—

The younger brother of His Highness the Raja Sahib Bahadur
born on 22nd February 1916, educated at the Aitchison College, Lahore,
is Military Secretary to His Highness the Raja Sahib Bahadur since
1934.

Chief Secretary: Sardar Bahadur Sardar Indar Singh, B.A.

Home Secretary: Sardar Bahadur Sardar Fateh Singh.

Judicial and Revenue Secretary: Lala Hargobind, P.C.S. (Retired.)

Under Secretary: S. Nazar Singh, B.A., LL.B.

GONDAL: HIS HIGHNESS SHREE BHAGVA SINHJEE, G.C.I.E., M.D., F.R.C.P.E., M.B.C.M., M.R.C.P.E., D.C.L., LL.D., F.R.S.E., M.R.A.S. M.R.I. (G.B.), F.C.P. & S.B., H.P.A.C., Fell. Bom. University, Maharaja Thakore Saheb of Gondal.

Born: 1865.

Assumed Full Powers, 1884.

Educated at the Rajkumar College, Rajkot, and at the University of Edinburgh.

His Highness was married to Nandkunverba, the daughter of H. H. Maharana Shri Naran Devji of Dharampur.

His Highness the Maharaja Thakore Saheb is a Jadeja Rajput. The early founder of the State Kumbhoje I had a modest estate

of 20 villages. Kumbhoji II, the most powerful chief of the house, widened the territories to their present limit by conquest, but it was left to the present enlightened and able ruler to develop its resources to the utmost, and mainly on account of its importance and advanced administration it earned the position of a first class state. Gondal has always been pre-eminent amongst the States of its class for the vigour with which public works have been prosecuted and was one of the earliest pioneers of Railway enterprise in Kathiawar. There are no export or import duties, the people being free from taxes and dues. Comparatively speaking Gondal stands first in Kathiawar in respect of education. Compulsory female education has been ordered by His Highness. Rs. 50 lakhs have been spent on irrigation tanks and canals, water supply and electricity to the towns of Gondal which is the capital of the State and to Dhoraji and Upleta.

Author of: "A History of Aryan Medical Science," and "A Journal of a visit to England."

Heir: YUVARAJ SHRI BHOJRAJJI.

Khangī Karbhari: P. P. BUCH.

HYDERABAD: HIS EXALTED HIGHNESS, RUSTOM-I-DOWRAN, ARASTU-I-ZAMAN, LT.-GENERAL, MUZAFFARUL-MULK WAL-MAMALIK, NAWAB SIR MIR OSMAN ALI KHAN BAHADUR, FATEH JUNG SIPAH SALAR, Faithful Ally of the British Government, NIZAMUDDOULA, NIZAM-UL-MULK ASAF JAH, G.C.S.I., G.B.E., NIZAM of Hyderabad.

Born: 1886.

Ascended the throne 1911.

Educated: Privately.

Married: In 1906 Dulhan Pasha, daughter of Nawab Jehangir Jung, a nobleman, representing a collateral branch of the Nizam's family.

Heir: NAWAB MIR HIMAYAT ALI KHAN BAHADUR, AZAM JAH.

Area of the State: 82,698 square miles.

Population: 14,512,161.

Revenue: 873.90 lakhs.

Salute: 21 guns.

The State has a Legislative Council of twenty members eight of whom are elected and an Executive Council of six officials with a President. It maintains its own paper currency and coinage, postal system, railways and army. It has a University with six Arts Colleges including one for women and Colleges for Engineering, Medicine, Law and Teaching. It has also an Honours College affiliated to Madras University, a College for Jagirdars and a College of Physical Education. There are also a Central Cottage Industries Institute, a Central Technical Institute and an Observatory. The State is of great historical and archaeological interest, as within its limits, are situated many old capitals of ancient and medieval Deccan Kingdoms, famous forts, temples, mosques and shrines and the wonderful Buddhist sculptures and paintings of Ellora and Ajanta.

Capital: Hyderabad—Population 466,894. It is the fourth largest city in the Indian Empire. The city is beautifully situated on the banks of the river Musi, with fine public buildings, broad cemented roads, good electricity and water supply and an efficient bus service run by the State Railway. Among interesting places are the Char Minar, the Mecca Masjid, the fort and tombs of Golconda and the large artificial reservoirs—the Osman Sagar and the Himayat Sagar.

RAJA SHAMRAJ RAJWANT BAHADUR.

IDAR: HIS HIGHNESS MAHARAJA DHIRAJ SHREE HIMMAT SINGHJI OF —The Idar House was founded 200 years ago by two brothers of the Maharaja of Jodhpur. His Highness Maharaja Shree Himmat Singhji is the 10th of this illustrious line, and the grandson of the well known soldier and statesman, His Highness Maharaja Major General Sir Pratap Singhji Sahib of Jodhpur fame. Maharaja Himmat Singh succeeded to the *Gadi* on the sudden death of His Highness Maharaja Sir Dowlat Singh on the 14th April 1931.

Born : On 2nd September 1899.

Married : In the year 1908 to Shree Jawahar Kunwar Sahiba, the eldest daughter of Raja of Khandela in the Jaipur State.

His Highness received his education at the Mayo College, Ajmer, where he remained for 5½ years, leaving it after a brilliant career in 1916. He attained his diploma standing first in the list of candidates from all the Chiefs' Colleges in India and was awarded His Excellency the Viceroy's medal. He won every class prize from the fifth to the diploma, five prizes for English and eleven others for various subjects. He won prizes in each division in succession for riding, and represented the College against the Aitchison College for 3 years at tent pegging, and also at tennis. For several years he was captain of one or other of the junior football or cricket elevens, and he was one of the best and keenest polo players in the college.

As will be seen, he upheld his family tradition as a horseman. From boyhood he was keen on hunting and pigsticking and before he had joined the College at the age of 10, he had accounted for many panther and bear to his own rifle. His Highness now keeps a racing stable and has had many successes. These active sports are not his only recreation for he has a good ear for music and is interested in painting and photography.

On leaving the college, His Highness Maharaja Shree Himmat Singhji took an active part in the State administration being appointed to His late Highness' Council, and later for several years was in charge of the administration under His late Highness' personal directions. He gained further practical experience from an extensive tour throughout India in 1929-30. He was therefore well qualified to take up his responsibilities as Ruler of His State when he ascended the *Gadi* of Idar. Since his accession in 1931, many schemes of improvement have been inaugurated which concern the social welfare of his subjects, their education, industries and agriculture. His Highness has embarked on an ambitious programme of reform and advancement which it is expected his experience and keen personal interest will enable him to carry through successfully.

His Highness has got two sons, Maharaja Kumars Shree Daljit Singhji and Amar Singhji, the eldest Maharaja Kumar Shree Daljit Singhji, the heir apparent, was born in 1917.

Salute : 13 Guns. *Area* : 1,669 sq. miles. *Revenue* : Rs. 21 Lakhs.

Diwan : RAI BAHADUR RAJ RATTAN JAGANNATH BHANDARI, M.A., LL.B.

Revenue: Rs. 10,06,715.

Capital Town: Jamkhadi.

The State for purposes of administration is divided into two Talukas, Jamkhadi and Kundgol and three Thanas, Wathar, Pathakal and Dhavalpuri. The present Ruler has been pleased to institute a separate High Court Bench and the judicial and the executive branches of the administration have been separated. He has also gone ahead in the matter of popularising the administration by the inauguration of a Representative Assembly of the people. Elementary and secondary education has all along been free in the State. The present Ruler has made even Higher Collegiate Education free for his subjects by endowing fifty freeships in the Sir Parashurambhau College, Poona, so named in beloved memory of his revered father, the late Captain Sir Parashuramrao Bhau Saheb. He is also the elected President of the Shikshana Prasarak Mandali, Poona. The hereditary title of "Raja" was conferred on the present Ruler on the birthday of His late Majesty the King Emperor, in June 1935. The Rajasaheb is one of the recipients of Their Majesties' Silver Jubilee Medal.

The Rajasaheb has been a representative member of the Princes Chamber for Group IV for the last seven years. The State has provided for free Medical Aid.

All education is free throughout the State.

Medical relief at the Hospital, etc., is also supplied free.

Importation of liquor is prohibited.

Cultivators are granted permanent heritable tenure with rights of full ownership over their holdings and are protected against usury by special rules for settlement of moneylenders' claims.

Village Panchayats have been introduced in twenty villages with a non-official president.

Subordinate land-holders have recently been granted the unusual privilege of exemption from resorting to the Civil Court for adjudication of their *inter se* disputes. These are now settled through the Arbitration Court presided over by the Nyayadhish.

JATH: SUB-LT. SHRIMANT
VIJAYASINHRAO RAMRAO
alias BABASAHEB DAFLE,
R.I.N., Ruler of Jath State.

Born on 21st July 1909.

*Ascended the Gadi on 12th
January 1929.*

Family History : Jath is one of the ancient Satara States. The Ruling family claims descent from Satvajirao Chavan, Patil of Daflapur to whom a Deshmukhi Watan was granted by Ali Adilshah, King of Bijapur in 1670. The Jahagir of Jath and Karajagi Paraganas were conferred upon him by Emperor Aurangzeb in 1700.

The Ruler was educated for some time in the Deccan College when he was suddenly called back owing to the serious illness of his father the late lamented Shrimant Ramrao Amritrao *alias* Abasaheb Dafle. He exercises full control over the administration of the State. During the short period of his rule he has evinced keen interest in the welfare of his subjects by introducing various reforms such as an independent High Court, a Local Board, etc.

Married to Shrimant Lilavati Raje, the eldest daughter of the late Rajesaheb of Akalkot in 1929.

In 1932, he visited England to attend the Third Round Table Conference on the invitation of the Secretary of State for India. He is an all round sportsman and a good cricketer. He takes keen interest in Scouting.

Recently he was appointed sub-Lieutenant in the Royal Indian Navy and has already undergone the requisite course of Naval Training.

Capital : JATH.

Population : 91,099.

It is midway between Miraj and Bijapur and is in direct political relation with the Government of India through the Deccan States Agency.

Area : 981 square miles.

Revenue : 3,53,499.

Dewan : Rao Saheb V. M. Karnik, B.A.

JHALAWAR : LT. HIS
HIGHNESS DHARMADI-
VAKAR MAHARAJADHIRAJ
MAHARAJ RANA SHRI RAJEN-
DRA SINGH Ji Dev Bahadur
of Jhalawar State.

Born : 15th July, 1900.

HIS HIGHNESS MIR
FAİZ MAHOMED K H A N
TALPUR of K h a i r p u r
State.

Born : 4th Jan. 1913.

Educated : At the Mayo
College, Ajmer.

Succeeded : December
1935 on the demise of his
late lamented father His
Highness Mir Ali Nawaz
Khan Talpur.

The Rulers of Khairpur are Muslim Talpur Balochs and belong to the Shia sect. Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783, the history of the State belongs to the general history of Sind. In that year Mir Fatehali Khan Talpur established himself as Ruler of Sind and subsequently his nephew, Mir Sohrab Khan Talpur, founded the Khairpur Branch of the Talpur family. In 1882 the individuality of Khairpur State was recognised by the British Government.

Khairpur is a first class State. It is the only State in Sind. The Ruler is entitled to a salute of 15 guns outside and 17 guns inside the State.

Area : 6,050 square miles, a large portion of which is desert.

Population : 227,168.

Current annual income : Rs. 20 lakhs.

Minister : J. M. Sladen, Esq., I.C.S.

Address : Khairpur Mir's, Sind.

Police Commissioner : KHAN BAHADUR ABDUL RASHID KHAN.

Chief Judge, Varishta Court : PARVATISHANKAR M. BHATT.

LATHI : THAKORE SAHEB
SHREE PRAHLADSINHJI OF
LATHI.

Born : 31st March 1912.

Succeeded to the Gadi on the 14th October 1918, on which date his father, Thakoresaheb Shree Pratapsinhji, died.

Educated : at the Rajkumar College, Rajkot, and before formal installation on the 9th February 1931, received practical administrative training in various Departments of Wankaner State under the able supervision of His Highness the Maharana Raj Saheb.

Married : Suryakunverba, daughter of the late Thakoresaheb of Kotda-Sangani situated in Kathiawar.

The Rulers of Lathi State, which is situated in Kathiawar, are Gohel Rajputs and descendants of Sarangji, one of the sons of the famous Sejakji, the common ancestor of Bhavnagar, Palitana and Lathi Houses. The present Thakoresaheb is about the 26th in descent from Sarangji, who was famous for his glorious and chivalric deeds in Kathiawar. He is the grandson of Thakoresaheb Sursinhji, best known as "Kalapi" whose poetic genius has shed a lustre over the literary life of modern Gujarat.

The Thakoresaheb made primary education free at the time of his formal installation and organized a Praja Pratinidhi Sabha to learn public opinion on matters of public interest.

Area : 41.8 square miles.

Population : 9,407.

Revenue : Rs. 1,67,970.

Electrical Engineer : MAGANLAL B. PANCHAL.

MALIYA: THAKORE
SAHEB SHRI HARISH-
CHANDRASINHJI of
Maliya, Kathiawar.

Born: 2nd March 1909.

Ascended the Gadi: 20th
March 1930.

Educated: At the Rajkumar College, Rajkot where he completed his Diploma and matric course. He was an all round sportsman while at the College. Hereceived administrative training under the late Thakore Sahab Shri Rajsinhji, his revered grandfather, who being convinced of his ability and capacity installed him on the *gadi* during his lifetime and went into voluntary retirement.

Since his accession to the *gadi* the present Thakore Sahab has introduced many reforms in the State, the chief among them being the abolition of Veth, forced labour. Primary education is free in the State. All the villages of the State are connected by telephonic communication. The financial position of the State is fairly sound.

The rulers of Maliya State are Jadeja Rajputs and belong to the same house as the Rulers of Cutch, Navanagar and Morvi, being descendants of Thakore Shri Kanyaji who ruled over Machhukantha and the greater part of Wagad from 1698 to 1734. On the death of Kanyaji, his son Aliaji got Morvi and his second son Modji received Maliya. He conquered the surrounding territory and founded the State of Maliya. Thus the Maliya house is an off-shoot of the senior branch of the Jadeja rulers.

Area of the State: 103 square miles. It has also a share in the village of Kataria in Wagad in Cutch.

Population: 12,142 as per census of 1931.

Annual Revenue: Rs. 1,50,000.

There are in all 15 villages and Maliya the seat of the dynastic *gadi* is situated on the banks of the river Machhu. The State runs a motor bus service from Maliya to Pipalia Road, the nearest railway station on the Morvi Meter Gauge line.

There is a ginning and pressing factory and a stone quarry in the State. Staple products: Juwari, Bajri and Cotton.

Heir-Apparent: K. S. BHUPENDRASINHJI.

Other Members: K. S. NARENDRASINHJI, K. S. RAJENDRASINHJI,
K. S. BALVIRSINHJI.

MANDI: CAPTAIN HIS HIGHNESS RAJA SIR JOGINDER SEN BAHADUR, K.C.S.I., the present Ruler of Mandi is a Rajput of Chanderbansi clan and it is traditionally asserted that the progenitors of the dynasty ruled in Inderprastha (Delhi) for over a thousand years.

Hon. Captain: 3/17 Dogra Regiment.

Born: 20th August 1904.
Ascended the Gadi: 1913.

Invested with full ruling powers, 1925.

Educated: Queen Mary's College and Aitchison College, Lahore.

Received Administrative and Judicial Training in Lahore 1923-24.

Married Twice, First the only daughter of His Highness the Maharaja of Kapurthala in 1923 and then the daughter of Kanwar Prithiraj Singh of Rajpipla in 1930.

Visited: Important countries in Europe in 1924 and 1932—Egypt, Palestine, Syria, Greece, Turkey, Balkans, etc. in 1927.

Recreations: Shooting, Tennis and Cricket.

Heir-Apparent: SHRI YUVRAJ YASHODHAN SINGH, born 7th December 1923.

2nd Son: Shri Rajkumar Ashok Pal Singh, born 5th August 1931.

Only daughter: Shrimati Rajkumari Nirvana Devi, born 12th December 1928.

Salute: 11 guns.

Area of the State: 1,200 square miles.

Population: 207,465. Average annual Revenue, Rs. 12,48,483.

Mandi is the premier hill State in the Punjab States Agency.

EXECUTIVE COUNCILLORS.

SIRDAR D. K. SEN, M.A., B.C.L. (Oxon.), LL.B. (Dublin), Bar-at-Law, Chief Minister.

PANDIT KANWAR NARAIN, Bar-at-Law, Revenue Minister.

KANWAR SHIV PAL, B.Sc., Home Minister.

Address: Mandi State, Punjab, India.

Telegraph Address: "Paharpadsha" Mandi.

MANGROL: SHAIKH SAHEB MOHMAD JEHANGEERMIAN, SHAIKH SAHIB of Mangrol.

Born : 29th October 1860.

Accession : 29th June 1908.

Educated : Privately and at the Rajkumar College, Rajkot.

Heir-Apparent : SHAHEBZADA SHAIKH MAHOMED ABDUL KHALIQ SAHIB, has four other sons and five daughters.

Area : 144 square miles including about 67 square miles non-jurisdictional territory.

Revenue : Rs. 6½ Lacs.

Mangrol Chiefship is an Administration having plenary jurisdictional powers analogous to that of second class States

as known in Kathiawar. Its relations with Junagadh of Political Subordination are mediatized by the British Government. This question is still under consideration by Government for final elucidation. It is styled as a "Mediatized Taluka under Junagadh."

PRINCIPAL OFFICERS.

Chief Karbhari : S. ALTAH HUSAIN.

Political Officer and Sir Nyayadhish : KANTILAL M. VASAVADA, B.A., LL.B.

Huzur Assistant : K. S. ABDUL AZIZ (Acting).

Engineer : SHAIKH MD. HUSAIN (Acting).

Head Master : KHWAJA SEED AHMED, B.A., B.T.

Electrical Engineer : M. S. SAYED, M.E.

MANSA: RAOLJI SHREE SAJJANSINHJI, the present Ruler of Mansa State. Age : 26 years. Succeeded to the Gadi on 4th January 1934. Educated : At the Princes' Mayo College, Ajmer.

Mansa is by origin, descent and repute an ancient and important State of the Sabarkantha Agency having political relationship with the Government of India through the Hon'ble the A. G. G. The ruling house of Mansa is lineally descended from the illustrious Vanraj Chavada who in 764 A.D. ruled both Gujarat and Kathiawar with his capital at Patan, and according to a statement of an Arabian traveller quoted in the Ras-Mala, he was one of the four great kings of the world.

The late lamented Ruler Raolji Shree Takhtasinhji ruled Mansa for 37 years. During his beneficent regime the State progressed in a variety of ways. Interested as he was in the development of agricultural and natural resources, he himself took great interest in the plantation of mango trees on a very large scale which added largely to the fertility of the soil and the prosperity of the State. He visited Europe in 1928 and while in England attended the sittings of the Butler Committee on Indian States.

The eldest sister of the present Ruler is married to the Raja Saheb of Bansda and the younger to the Yuvaraj Saheb of Lakhtar. Two of his younger brothers are studying law in England.

Average Annual Income : Rs. 1,80,000. *Population* : 17,000.

Mansa is the capital of the State. Electric lighting has been introduced in the capital. The State also maintains water works, a flour mill, a decent library and one dispensary for the comfort of the subjects. Medical treatment and attendance are given free to the people of the State. Primary education is also provided for in the State. An Anglo-Vernacular School upto English v Standard is maintained by the State and it is hoped that this School will shortly be raised to a High School.

PRINCIPAL OFFICERS OF THE STATE.

General Adviser: RAJKUMAR SHREE YESHWANTSINHJI, second brother of the ruler, has the Higher Diploma of the Princes' Mayo College.
Dewan: RANCHHODLAL M. MEHTA, Esq.

Nyayadhish: UPANDRALAL NANDLAL ACHARYA, Esq., B.A., LL.B.

State Medical Officer: S. V. MOHILE, Esq., M.B., B.S.

Raj Riyasat Officer: MOHANSINHJI K. KHER, Esq.

Revenue Officer: BHAVSINHJI PARMAR, Esq.

MAYURBHANJ: MAHARAJA SIR PRATAP CHANDRA BHANJ DEO, K. C. I. E., Maharaja of Mayurbhanj.
Born: February 1901.

Succeeded to the Gadi on the 23rd April 1928 on the demise of his elder brother Lieutenant Maharaja Purna Chandra Bhanj Deo.

The Maharaja was admitted as a member of the Chamber of Princes by his own right in March 1931.

Educated: At the Mayo College, Ajmer, and Muir Central College, Allahabad.

Married: On the 25th November 1925, the daughter of Maharaj-Kumar Sirdar Singhji and grand-daughter of the late Rajadhiraj Sir Nahar

Singhji, of Shahpura in Rajputana.

Heir-Apparent: TIKAIT PRADEEP CHANDRA BHANJ DEO.

Area of State: 4,243 square miles.

Population: 889,603.

Revenue: Rs. 30,00,000.

Salute: Permanent salute of 9 guns.

Mayurbhanj ranks first in point of population and revenue among the States of the Eastern States Agency, numbering forty, twentysix of which were till April 1933 known as the Orissa States, and fourteen as the Central Provinces States. The history of its Ruling family goes back into hoary antiquity and numerous copper plate grants and archaeological finds testify to its powerful sway, and to the vast domains that constituted the territory of the Bhanja Kings, for hundreds of years. Its geographical and strategic position constituted it an important buffer State at the time when the East India Company and the Mahrathas were engaged in a struggle for supremacy in Eastern India and Mayurbhanj assisted the British cause. During the Mutiny of 1857, the Ruler of Mayurbhanj again distinguished himself as a loyal ally of the East India Company. The State is administered very much on British Indian lines, judicial independence, which has been secured under a full-powered High Court, being a special feature of its administration. The State is rich in mineral and forest resources and supplies the bulk of the iron ore needed for the Tata Iron and Steel Works of Jamshedpur. The present administration is making every effort to promote the industrial interests of the State.

The Maharaja is President of the Council of Rulers of the Eastern States, an organisation which has been created for joint consultation in matters of common concern.

MIRAJ (JR): MEHERBAN MADHAVRAO HARIHAR RAO *alias* BABASAHEB PATWARDHAN, the present ruler of Miraj Junior State is the 2nd son of late Shrimant Balasaheb Patwardhan, Chief of Kurundwad Senior. He was selected by the Bombay Government for the chiefship of the Miraj Junior State, and was adopted in December 1899, by Lady Parwati-baisaheb, the mother of the late Chief, Laxmanrao Annasaheb, who died prematurely on the 7th of February 1899.

Born: In 1889.

STATE COUNCIL.

President and Dewan : M. D. SOLANKI, B.A., LL. B.

1st Member : M. P. BAXI, B.A., LL.B.

2nd Member : B. M. BUCH, HIGH COURT PLEADER.

MYSORE : COLONEL HIS
HIGHNESS MAHARAJA
SIR SRI KRISHNARAJA
WADIYAR BAHADUR,
G.C.S.I., G.B.E., Maharaja
of Mysore.

Born : 4th June 1884.

Succeeded : 1st February
1895.

Educated : Privately.

Invested with full ruling
powers : 1902. Celebrated
Silver Jubilee of his reign :
8th August 1927.

Area of the State : 29,474.82 square miles.

Population : 6,557,302.

Address : The Palace, Mysore, Bangalore ; and Fern
Hill (Nilgiris).

EXECUTIVE COUNCIL.

Dewan of Mysore :

AMIN-UL-MULK SIR MIRZA M. ISMAIL, KT., C.I.E., O.B.E.

Members :

RAJAMANTRAPRAVINA S. P. RAJAGOPALACHARI, B.A., B.L.

N. MADHAVA RAU, Esq., B.A., B.L.

Private Secretary to His Highness :

SIR CHARLES TODHUNTER, K.C.S.I., J.P.

Huzur Secretary to His Highness :

RAJASABHABHUSHANA T. THUMBOO CHETTY, B.A., O.B.E.

NAGOD : SHRIMANT RAJA SAHIB MAHENDRA SINGH JU DEO BAHADUR. The present Ruler of Nagod State.

Born : on the 5th Feb. 1916.

Succeeded to the Gadi on the 26th February 1926. He was invested with full ruling powers on the 9th Feb. 1936.

He was formerly educated at the Daly College, Indore and later privately at Nagod. Subsequently he received his administrative training at Bangalore (Mysore State) under a European Guardian G. R. Genge, Esq.

Married the daughter of H. H. THE MAHARANA OF DHARAMPUR STATE (Surat Dist.) in May 1932. A Rajkumari was born in March 1933.

A son and heir was born on 7th March 1936.

The first younger sister of the RAJA SAHIB was married to H. H. the Maharaja of Sirmoor State on the 15th April 1936.

The Chiefs of Nagod are Parihar Rajputs, one of the four Agnikula clans, whose traditional home is on Mount Abu. The history of their migration into Bundelkhand and Baghelkhand is of considerable interest, but exceedingly difficult to unravel. The Chief of Nagod received a Sanad from the Government in 1809.

Nagod is a Sanad State in Central India.

Area about 501.4 square miles.

Population 74,589 according to the census of the year 1931. Geologically, Nagod presents several features of interest. Limestone of a superior quality known commercially as Nagod Limestone, is found in the form of low hills close to the chief town, and is the most valuable source of lime yet known in India.

For purposes of administration, the State is divided into 4 Tehsils. Elementary and secondary education has all along been given free in the State. Liberal scholarships are also granted for secondary and higher education. The State has also provided for free medical aid to all irrespective of caste and creed.

PRINCIPAL OFFICERS OF THE STATE :—

LAL SAHIB BHARGAVENDRA SINGHJI, *Dewan.*

PARTABGARH STATE:
 HIS HIGHNESS MAHA-
 RAWAT RAM SINGHJI
 BAHADUR of Partabgarh.

Born : In 1908.

Succeeded to the Gadi : In 1929.

Hereditary Salute : 15 guns.

Partabgarh State, also called the Kanthal, was founded in the sixteenth century by a descendant of Rana Mokul of Mewar.

The town of Partabgarh was founded in 1698 by Partabsingh. In the time of Jaswant Singh (1775-1844) the country was overrun by the Marathas, and the Maharawat only saved his State by agreeing to pay Holkar

a tribute of Salim Shahi Rs. 72,700 (which then being coined in the State Mint was legal tender throughout the surrounding Native States), in lieu of Rs. 15,000 formerly paid to Delhi. The first connection of the State with the British Government was formed in 1804; but the treaty then entered into was subsequently cancelled by Lord Cornwallis and a fresh treaty was made in 1818. The tribute used to be paid to Holkar, is being paid to the British Government under the terms of the treaty of Mandsaur and was, in 1904, converted to Rs. 36,350 British Currency. The State enjoys plenary jurisdiction. The highest administrative and executive office is termed "Mahakma-Khas" where sit His Highness and the Dewan of the State. There is a duly graded judiciary under a High Court. Revenue about 5½ lakhs.

PRINCIPAL OFFICERS.

Dewan : RAO SAHIB CHUNILAL M. SHROFF, B.A.

Kamdar Khasgi : SHAH MANNALAL.

Naib Dewan : SHAH MANAKLAL, B.A., LL.B.

Private Secretary to His Highness : MR. PHEEROZESHAH FARDOONJI.

Revenue Officer : MAHARAJ BALWANT SINGH.

Civil and Criminal Judge : BABU MOHANLAL AGRAWAL, B.A., LL.B.

Superintendent Customs and Excise : BAPU BAKHTAWAR SINGH.

Medical Officer : DR. JIWANLAL P. PAREKH, L. M. & S.

Educational Officer : MR. W. G. KALE, B.A.

Superintendent of Police : PUROHIT JAGDISH LAL.

PATIALA : LIEUTENANT-GENERAL HIS HIGHNESS FARZAND-I-KHAS DOULAT-I-INGLISHIA, MANSUR-UL-ZAMAN AMIR-UL-UMRA MAHARAJA DHIRAJ RAJ RAJESHWAR SHRI MAHARAJA-I-RAJGAN BHUPINDER SINGH MORINDER BAHADUR YADU VANSHAVATANS BHATTI KUL BHUSHAN, G.C.S.I., G.C.I.E., G.C.V.O., G.B.E., LL.D., A.D.C., the present Ruler of Patiala, which is the largest of the Pothohar States and the premier State in the Punjab, was born in 1891, succeeded in 1900, and assumed the reins of Government in 1909, on attaining majority. His Highness the Maharaja Dhiraj enjoys at present a personal salute of 19 guns and he and his successors the distinction of exemption from presenting Nazar to the Viceroy in Durbār in perpetuity. The principal crops are grain, barley, wheat, sugarcane, rapeseed, cotton and tobacco. The State possesses valuable forests and is rich in antiquities. One hundred and thirty-eight miles of broad-gauge railway line comprising two sections—from Rajpura to Bhatinda and from Sirhind to Rupar—have been constructed by the State at its own cost. His Highness maintains a Contingent of two Regiments of Cavalry and four Battalions of Infantry, one Battery of Horse Artillery.

The State maintains a first grade College which imparts University education besides numerous high schools. Primary education is free throughout the State.

Area : 5,932 square miles.

Population : 1,625,520.

Gross Income : Rupees One crore and fifty Lakhs.

Since the State entered into alliance with the British Government in 1809, it has rendered help to the British Government on all critical occasions such as Gurkha War, Sikh War, Mutiny of 1857, Afghan War of 1878-79, Tirah and N. W. F. Campaign of 1897. On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King-Emperor and offered his personal services. Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the Frontier on the Staff of the General Officer Commanding and the Imperial Service Contingent saw active service towards Kohat and Quetta Fronts. For his services on the N. W. F. His Highness was mentioned in despatches.

His Highness was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June, 1918, and during his stay in Europe His Highness paid visits to all the different and principal Fronts in Belgium, France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments :—

- | | |
|---|---|
| (a) Grand Cordon of the Order de Leopold, | (e) Grand Cordon of the Order of St. Gregory the great (Papal). |
| (b) Grand Cross of the Legion of Honour, France, | (f) Grand Cordon of the Order of the Nile, |
| (c) Grand Cross of the Order of the Crown of Italy, | (g) Grand Cross of the Order of the Crown of Roumania, and |
| (d) Grand Cross of the Order of St. Lazare. | (h) Grand Cross of the Order of St. Saviour of Greece (1926). |

His Highness represented the Indian Princes at the League of Nations in 1925. In 1926 he was elected Chancellor of the Chamber of Princes (Narendra Mandal). He was re-elected Chancellor of the Chamber in 1927-28-29-30. In 1930 His Highness led the Princes' delegation to the Round Table Conference. His Highness was again elected Chancellor of the Chamber of Princes in 1933, 34 & 35 and was invited to attend the jubilee of H. M. the King-Emperor.

PATNA: MAHARAJA
RAJENDRA NARAYAN
SINGH DEO, the present
ruler of Patna State, E. S. Agency.

Born: 1912.

Ascended the gaddi: 1933.

Educated: At the Mayo College, Ajmer, where he passed the Chiefs College Diploma Examination topping the list of successful candidates and at St. Columba's College, Hazaribag, where he passed Intermediate Arts Examination of the Patna University, topping the list of successful candidates of that institution.

Married: In 1932 the daughter of His Highness the Maharajadhiraj of Patiala.

History: Maharaja Ramai Deo a direct descendant of Prithwi Raj Chauhan the last Hindu Emperor of India founded the State of Patna about 1159 A.D. The Maharajas of Patna have enjoyed the hereditary title of Maharaja from the very beginning. The Patna State is identical with the ancient "Dakshina Kosala" which was the kingdom of Kusha the second son of Rama. Its various architectural ruins bear testimony to the ancient culture and civilization which flourished here in the olden times.

The State was taken under British protection in 1803 and ever since it has remained extremely loyal and is well known for its uniform devotion to the British Government. Patna is a well governed and progressive State and all its valuable resources are spent on works of public utility. It possesses very good educational and industrial institutions. Primary education is compulsory for all its subjects. It has a fully equipped Hospital at the Capital, with many out-lying Dispensaries and a Child Welfare Centre. There are telephone and telegraph connections in the important towns of the State. It has beautiful valleys having enchanting sceneries and an abundance of Shikar of all kinds of birds and beasts particularly tigers.

RADHANPUR : HIS HIGHNESS NAWAB SAHEB SIR JALALUDINKHAN BABI BAHADUR, K.C.I.E., the present Ruler of Radhanpur State, is a descendant of the illustrious Babi family who since the reign of Humayun have always been prominent in the annals of Gujarat.

Born : 1889. Invested with full powers on 27th November, 1910.

Educated : At the Rajkumar College, Rajkot, and secured the Final Diploma in the year 1909. His Highness was the first Chief in the Bombay Presidency to win the Gujarat Cup at the Pig-Sticking Meet at Bhandu, in the year 1911.

The Nawab Saheb is a member of the Chamber of Princes in his own right from the beginning.

Hereditary and permanent salute : 11 guns.

The State of Radhanpur is situated in the North of Gujarat and has 172 villages. It is a first class State in the States of Western India with full Plenary, Criminal and Civil Jurisdiction.

The State pays no tribute to the British Government or to any other Indian State, but on the contrary receives an annual Jama (tribute) amounting in all to Rs. 1,712 from some of the surrounding villages.

Area of the State : 1,150 square miles.

Population : 70,530 according to census of 1931.

Average Gross Revenue : Rs. 7,50,000 to 8,00,000.

Cotton, wheat, rapeseed, castorseed and different kinds of grain are the principal agricultural products.

RAJKOT: HIS HIGHNESS THAKORE SAHEB SHRI DHARMENDRASINHJI, Thakore Saheb of Rajkot, (Kathiawar.)

Born: On 4th March 1910; succeeded to the *Gadi* on 21st April 1931.

Educated: At Rajkumar College, Rajkot, and later on in England at the High Gate School, London. He belongs to the Vibhani clan of Jadeja Rajputs and enjoys plenary powers in the administration of the State.

Area of the State: 283 sq. miles.

Population: 75,540.

Average Revenue: Rs. 12,50,000.

Dynastic Salute: 9 guns.

The Administration is conducted on a Secretariat system in co-operation with Praja Pratinidhi Sabha or People's Representatives Assembly based on universal franchise with a Legislative Council and democratic Municipality linked thereto.

Rajkot town is a trade emporium, also known for its various industrial activities. It is the headquarters of the W.I.S. Agency, has a "Rajkumar" College and is served by three important Railway lines. Educationally it is the premier city in Kathiawar.

R EWA: HIS HIGHNESS BANDH-
VESH MAHARAJA SIR GULAB
SINGH JU DEO BAHADUR,
G.C.I.E., K.C.S.I., MAHARAJA OF
REWA, (Rajput Baghel).

Born : 1903; Ascended the gadi
in 1918; invested with ruling
powers in 1922.

Educated : At the Daly College,
Indore.

Married : In 1919 a sister of
His Highness the Maharaja of
Jodhpur, and also married in
1925 the daughter of His late
Highness Maharaja Sir Madan
Singh Bahadur, K.C.S.I.,
K.C.I.E., Ruler of Kishangarh.

The Maharaja is a noted
sportsman and has shot 495
tigers.

He was a delegate to the 1st
and 2nd sessions of the Round

Table Conference and was also a member of the Federal Structure
Committee of the Conference. He is a member of the General Council
of the Daly College and of the Managing Committee of King Edward
Medical School, Indore.

Heir-Apparent : SRI YUVRAJ MAHARAJ KUMAR MARTAND SINGH
SAHEB (born in 1923).

Area of State : 13,000 square miles.

Population : 1,587,445.

Revenue : Rs. 60,00,000.

Salute : 17 guns.

Rewa is the largest and the easternmost State in the Central
India Agency. The State is bounded on the North by the Banda,
Allahabad and Mirzapur Districts of the U.P., on the East by the
Mirzapur District and the Feudatory State of Chhota Nagpur, on the
South by the Central Provinces, and on the West by the States of
Maihar, Nagod, Sohawal and Kothli. The State has a number of
'Waterfalls,' some of which, Chahcai and Keoti are famous for their
height and grandeur. The State is very rich in mineral resources.

The Administration of the State is carried on in the name and under
the direct control of His Highness the Maharaja who is the fountain
head of all authority in the state. On the executive side His Highness
is assisted by a State Council of 8 members of which His Highness
himself is the President. On the Judicial side there is a Chief Court
consisting of Judges. A Raj Parishad consisting of 39 members with
the number of officials and non-officials almost equal, has also been
established to advise on such matters of public interest as are referred
to it. His Highness takes very great interest in the Administration
of the State and in the development of trade and industries for which
purpose he has instituted a state Bank with branches all over the
State.

SAILANA : HIS HIGHNESS
RAJA SIR DILEEP SINGHJI
BAHADUR, K.C.I.E., Raja
of Sailana.

Born on 18th March 1891.

*Educated at the Mayo College,
Ajmer.*

*Ascended the Gadi on the 14th
July, 1919.*

*Married the daughter of His
Highness the Maharawat of
Partabgarh in 1909 and sub-
sequent to her demise married
the daughter of the Rawatji
Sahib of Meja, one of the
sixteen first class nobles of
Mewar.*

Heir-apparent : MAHARAJ-
KUMAR DIGVIJAY SINGHJI, born
on the 15th October 1918.

Second Son : LAXMAN SINGHJI,
born on the 21st February 1921.

The Judicial Powers of His Highness are plenary.

His Highness is a descendent of the Rathor Rajput clan of the Jodhpur House and is the 11th Ruler of the Sailana State.

His Highness presided over the annual sessions of the All-India Kshattriya Mahasabha at Puri, Benares, Indore, Darbhanga, Delhi and Hoshangabad, is its patron and was its General Secretary for 13 years; is permanent President of the Kurukshetra Restoration Society; is President of the Council of Shri Bharat Dharma Mahamandal, Benares; is a member of the General Council of the Mayo College, Ajmer, and Daly College, Indore, and is a member of the Princes' Chamber, Delhi.

Among the notable events of his reign are :—

The raising of the Local Anglo-Vernacular School to the status of a High School and constructing a new school building and a splendid Boarding House, making education compulsory but quite free; providing Free Medical Aid throughout the State. A new commodious Hospital has been built with facilities for indoor patients and a separate Maternity Ward furnished with the most up-to-date apparatus. He has granted a democratic constitution to the local Municipality, and has established an industrial free Mandi at Dileepnagar and an Agricultural Farm in the capital.

In recognition of his benign rule, His Highness was made a K.C.I.E. on the 1st January, 1936.

Rai Bahadur P. Uttam Narain Nagu who served with distinction in the Central India Agency Police Department is the present Dewan.

Area of the State : 297 square miles.

Population : 35,223. *Revenue :* Rs. 3,00,000.

Salute : 11 guns. *Address :* Sailana State (Central India).

SANDUR: RAJA SHRI-
MANT YESHWANTRAO
HINDURAO GHORPADE,
MAMLA KATMADAR, SENAPATHI,
Ruler of Sandur.

Born : 1908. Succeeded to the
Throne in 1928. Assumed the
reins of administration in 1930.

Married : On 22nd Dec. 1929
the eldest daughter of Umadat-
Ul-Mulk, Raj Rajendra,
Major Maloji Narsingh Rao
Shitole, Deshmukh, Rustamjung
Bahadur of Gwalior.

Heir Apparent : Shrimant
Morar Rao Ghorpade, born 7th
December 1931.

Second Son : Rajkumar Ranjit
Singh, born 16th February 1933.

Daughter : Princess Nirmala
Raje, born 8th February 1934.

In 1923 the State was brought into direct political relations with
the Government of India.

The State possesses sandalwood forests and rich manganese
mines. Ramandrug Hill Station (Altitude 3,500 feet) and Shri Karteek-
swami Temple are the places of interest.

All temples, wells and schools have been thrown open from 1932
to all Hindus irrespective of caste or creed. Education is imparted
free in the State, up to the Matriculation standard. A Proclamation
was issued by the Ruler on 10th September 1934 directing that the
execution of decrees passed by Civil Courts be stayed till 31st March
1935 as a temporary palliative. This was subsequently extended to
the end of 1935. A Committee has also been appointed to concert
measures to relieve agricultural indebtedness.

The State Adviser, the Secretaries to Government and any number
of extra members, whom the Ruler may be pleased to nominate, form
the Huzur Darbar (Executive Council). The following are the Members
of the Huzur Darbar :

Shrimant R. M. Deshmukh, B.A., LL.B. (Cantab.), Bar-at-Law.
Shrimant Sardar Bhujangrao Yeshwantrao Raje Ghorpade.
Meherban G. T. Konnur, B.A., Ex-Dewan of Sandur.
Meherban V. Narasimha Rao, M.A.

The State Adviser exercises the powers formerly exercised by the
Dewan and certain Huzur powers delegated to him under a special
Instrument of Instructions. Arrangements have been made with
the Madras Government whereby the District and Sessions Judge
(Ex-Officio) of Bellary is appointed by the Darbar as the Nyayadhish
of the Chief Court.

To afford to the people an opportunity for expressing their wants
and wishes to the Government the Ruler was pleased to constitute a
State Council in 1931.

The Ruler and the Rani Saheba visited Europe last year.

SANGLI: LIEUTENANT HIS HIGHNESS MEHERBAN SHRIMANT SIR CHINTAMANRAO DHUNDIRAO *alias* APPA SAHEB PATWARDHAN, K.C.I.E., Raja of Sangli.

Born : 1890. Ascended the Gadi in 1903. *Educated* at the Rajkumar College at Rajkot. Her Highness is a daughter of Sir M. V. Joshi, Kt., K.C.I.E., B.A., LL.B., of Amraoti, *Ex* Home Member of the Government of Central Provinces.

Heir : SHRIMANT RAJKUMAR MADHAVRAO *alias* RAO SAHEB PATWARDHAN YUVARAJ.

Area of State : 1,136 sq. miles.

Population : 258,442.

Revenue : The gross revenue of the State based on the average of the actual receipts for the past five years is Rs. 15,95,584.

Salute : 9 guns permanent and 11 personal. Enjoys I Class Jurisdiction, *i.e.*, power to try for capital offences any persons except British subjects.

Has served as Member or first substitute member of the Standing Committee of the Chamber of Princes since 1924 and is a member of the Standing Committee now. Served also as a Member of the I and II Round Table Conferences and as a member of the Federal Structure Committee.

His Highness the Raja Saheb is assisted by an Executive Council consisting of (1) the Diwan Rao Bahadur G. R. Barwe, B.A., (2) Political Minister and Second Councillor Rao Saheb Y. A. Thombare, B.A., (3) Third Councillor Mr. Y. V. Kolhatkar, B.A., LL.B., and (4) Fourth Councillor Khan Bahadur K. K. Sunavala, B.A., LL.B.

The total number of Co-operative Societies is 87, being made up of 70 agricultural and 15 non-agricultural. Besides these there is one Central Co-operative Bank and a Co-operative Sale-Shop.

The State has (a) three Boys' High Schools, one Girls' High School and one Mahila Vidyalaya or School for Adult Women, and (b) one Hospital, five dispensaries and one Maternity Home.

SANT: MAHARANA SHRI JORAWARSINHJI the present Ruler; born on 24th March 1881 and installed on the Gadi in 1896. Formally invested with full powers on 10th May 1902. Educated in the Rajkumar College, Rajkot, and was associated with the Government Administration of the State for more than a year preparatory to his being invested with full powers. He is an intelligent Prince who keenly supervises the administration of the State. During his regime many improvements have been made and the State is making good progress: The revenue of the State increased—Its lands have been surveyed and regular settlements introduced—Provision for English education made for the first time and Primary and Secondary education made free throughout the State—Election system sanctioned for Municipality—

Free medical relief extended by opening new dispensaries in the district. Many other improvements have been introduced during his regime such as founding of a permanent Relief Fund, granting of liberal tagavi loans to the agriculturists during the time of scarcity. Money is also advanced to the local merchants by way of encouragement at cheap rate of interest. Other improvements of utility such as installation of electricity in the towns of Sant and Rampur, clock tower, public gardens, metalled roads in parts have also been made. The regime of Maharana Shri Jorawarsinhji has been anything but a bed of roses. Famine and lean years had made the financial condition of the State far from satisfactory; but wise management has been instrumental to keeping its head up.

The Rajaji exercises full powers and enjoys a dynastic salute of 9 guns. Primogeniture is the rule of succession to the Gadi and the Darbar's right of adoption has been recognised and confirmed by Government.

During the Great War the services of the Rajaji Saheb were appreciated by Government. The Government were also pleased to recognise the right of the Rajaji to be a member of the Chamber of Princes.

The Ruling Family in the Sant State belong to the Puar or Parmar caste of Rajputs and are believed to have descended from the celebrated family of Vikramaditya and Raja Bhoj of Ujjain. They first came down from Dhar and settled at Jhalod and finally about the 13th Century at Sant. The founder of the family was Rana Sant who with his brother Limdev was forced to leave Jhalod and established himself at Sant.

Area: 394 square miles.

Population: 83,531 (1931).

Revenue: Rs. 4,35,959.

Heir-apparent: MAHARAJ KUMAR SHRI PRAVINSINHJI born on 1st December 1907.

Educated in: the Rajkumar College, Rajkot.

Married: Maharaj Rajkumari, daughter of Maharaj Kumar Shri Vijayarajji, Heir-apparent, Cutch State, on 15th May 1928, at Bhuj.

With effect from the 1st April 1933, all the Bombay states were brought into the Political relation with the Government of India through the Agent to the Governor General for the Gujrat States and Resident at Baroda with head-quarters at Baroda. Since then the Sant State has been in direct political relation with the Government of India.

The supervision and management of the Vaccination Department of the State has been transferred to the State from 1st December 1933, by Government and the Chief Medical Officer of the State has been appointed as the head of the department.

Unrestricted control and management of the State schools was transferred to the State by Government from 1st May 1933.

SIRMOOR: HIS HIGHNESS
MAHARAJA RAJENDRA
PARKASH BAHADUR of
Sirmoor.

LT.-COL. HIS HIGHNESS SIR AMAR PARKASH BAHADUR K.C.S.I., K.C.I.E., the late Maharaja of Sirmoor State died in Vienna on the 13th August, 1933, after a brilliant and successful reign of more than 21 years. His sad and sorrowful demise was naturally a heavy shock and deprived his son, His Highness Maharaja Rajendra Parkash Bahadur, of the solicitous and affectionate care of his father and placed the heavy and responsible burden of the administration of the State on his shoulders while

still in the early years of his life.

His Highness the present Maharaja was born on the 10th January 1913. He was carefully educated during the life time of his father who took special interest in the upbringing of his son. During his father's absence in Europe when the administration of the State was placed in the hands of a council he gained practical training in and immense knowledge of the administration and thereby equipped himself well for undertaking the responsibilities of his high office. Although it was before the due time, in recognition of his ruling merits and abilities the Maharaja was installed to his ancestral *Gadi* by the Hon'ble Sir J. A. O. Fitz Patrick, K.C.I.E., C.B.E., I.C.S., Agent to the Governor General, Punjab States, in November 1933.

The young prince is a good scholar in English and has a store of wisdom far beyond his years. Besides being hard working he is energetic, intelligent and a keen sportsman. He possesses very refined tastes, a sympathetic heart and is a lover of justice. As the Chief Justice of the State High Court he considers it his solemn obligation to dispense evenhanded justice with scrupulous care. Ever since his assumption of the role of Government he has administered the State with conspicuous ability, without sparing any pains to promote the interests of his State and subjects. He is always anxious to explore new avenues and examine fresh channels which might serve to raise the moral and material status of his people and country.

The revival of the agricultural and industrial exhibition is a happy indication of the deep and enduring interest His Highness takes in promoting the agricultural and industrial interests of his subjects. The inaugural ceremony of the exhibition was performed by His Highness the Maharaja on the auspicious occasion of his Raj Tilak which was celebrated in February 1935. A similar exhibition was being run on organised lines during the regime of His late Highness Maharaja

Sir Surendra Bikram Parkash Bahadur, K.C.S.I., and continued successfully during the reign of H. H. the late Maharaja Sir Amar Parkash Bahadur, K.C.S.I., K.C.I.E., but it had suffered a set-back in the year 1914 owing to the outbreak of the Great War and also due to the unfavourable agricultural conditions then obtaining. The measure taken by the present Maharaja in reviving the exhibition is sure to pave the way to commercial development of the State and will prove a success under the patronage of His Highness to whose munificence it owes its origin.

Another event which marks His Highness' accession to his ancestral *Gadi* is the grant of certain concessions to his subjects, which include (1) remission of land revenue and forest outstandings up to the year 1932, (2) remission in the term of imprisonment of State convicts, (3) grants-in-aid for meeting the educational needs of the people, (4) provision of a gymnasium for use of the public, (5) introduction of panchayat system, etc., etc.

A Bird's eye view of Nahan.

He is accessible to all and is fond of undertaking extensive tours with a view to studying the conditions of his people and keeping himself informed of the march of events in the State. He takes a keen personal interest in all that conduces to the general happiness and welfare of his people. His sterling and outstanding qualities of head and heart have won for him the affection of his faithful and loyal people.

In fact the young Maharaja during the short period that has passed since his investiture with full ruling powers has proved himself to be a very promising and an enlightened Ruler and gives bright promise of proving himself a worthy successor of his illustrious father,

Chief Secretary to the Durbar :

SARDAR NARAYAN SINGH SARDAR BAHADUR.

Area of the State: 1,141sq. miles. Revenue: Rs. 9,00,000 approximately.

Population: 148,568 as per census of 1931.

Permanent Salute: 11 guns. Address: Nahan, Sirmoor, Punjab.

SOHAWAL : SHREEMAN RAJA
JAGENDRA SINGHJI DEO
BAHADUR OF SOHAWAL
STATE.

Born : 1900.

Educated : at the Daly
College, Indore, and Privately.

Ascended the Gadi on 16th
February 1930, succeeding
his father Shreeman Raja
Bhagwatraj Bahadur Singhji
Deo, C.I.E. Shreeman Dur-
bar has two brothers 1. RAJ
KUMAR VEERENDRA SINGHJI.
2. RAJ KUMAR PURUSHOTTAM
SINGHJI.

The Ruling family belongs
to the famous clan of Baghela
Rajputs who came from Anhilwara Patan in the early part of the
thirteenth Century. The State was founded in the beginning
of the seventeenth Century by Raja Fateh Singhji, who was
acknowledged suzerain of a large tract of country by the Imperial
firman of 1066 A.H. (1655 A.D.). By a subsequent sanad
dated the 1177 A.H. (1763 A.D.) Shah Alum gave recognition
to the hereditary title of "Raja" and "Bahadur," the Manasab
of Chahar-Hazari and the privilege of carrying "Alum" (Flag)
and Naqqara (Kettle drum). The State which yielded a revenue
of Rs. 19 Lacs a year shrank in extent owing to the depredations
of the Marathas and Bundelas. It was granted a Sanad by the
British Government in 1809 A.D.

The State has now an area of 252 square miles and an annual
income of Rs. 2,25,000 including alienations. It has a population of
42,192 souls. The State has large economically exploitable
deposits of Lime Stone, White Chalk and Red and Yellow Ochres.
Among ancient relics, it contains the shrine of Shree Sharabhang
Muni and the temple of Shree Gaibi Nathji.

The Administration of the State is carried on by a Council
of which the Durbar is the President and the following are
members :—

1. RAI SAHIB MR. S. P. SANYAL, *Adviser.*
2. PANDIT NARSINGH NARAIN MISHRA, M.A., LL.B., (*Dewan*).
3. THAKUR AWADHESH NARAIN SINGH, (*Political Secretary*).
4. DEWAN LAL JAGMOHAN SINGHJI.
5. MUNSHI BANSHIDHARJI, *Secretary.*
6. KHASGI OFFICER.

SUDASNA: THAKOR
SHRI PRITHI SINGHI,
 the Ruling Chief of
 Sudasna State in the Sabar-
 kantha Agency (Western India
 States) belongs to the ancient
 Parmar Clan of Rajputs, and
 traces his lineage to that illus-
 trious Emperor of India, Vikram
 the great of Ujjain.

Born: On 24th August 1884.

Educated: At Scott College,
 Sadra where he distinguished
 himself both as a scholar, and
 sportsman.

Since he took over the full
 reigns of the State administra-
 tion, in 1906 through his sagacious capacity, sincerity, and keen
 devotion to duty he has not only brought the State to its present
 stage of development but earned for himself the confidence of his
 brother-chiefs, and the appreciation of the British Government. He
 has also won the goodwill, respect, and gratitude of his own subjects.

Kumar Shri Ranjit Singhji, the *heir-apparent*, and his only son
 was born on 11th August 1910.

Matrimonial relations of the Ruling Family are with premier
 estates of Sirohi, Jodhpur, Malwa, and Mewar States.

Primary Education and Medical Relief are free throughout the
 State.

Area: 32 Square Miles.

Population: 6,922 souls.

Officials:

Karbhari: KUMAR SHRI RANJIT SINGHI.

Nyayadhish: MR. S. P. VYAS.

Medical Officer: MR. S. G. TRIVEDI, L.C.P.S., L.T.M.

TALCHER : Raja K. C. B. Harichandar, the present Ruler of Talcher State, Eastern States Agency.

Born : 9th June 1880.

Succeeded on 18th December 1891. Assumed ruling powers on 9th June 1901.

The State of Talcher was established at the end of the 12th Century by Raja Naranhari Singh Deo, a scion of the Raja Thakur family of Jaipur. The Rajas of Talcher never submitted to the sovereignty of Puri or the Marathas and they all along maintained their independence. The British Government recognised their independence and entered into treaty relations with the great grand-father of the present Ruler in 1803. Raja

Dayanidhi Birabar Harichandan helped the British Government with his troops in quelling the Angul rebellion. The present ruler placed himself and the resources of the State at the disposal of the British Government during the Great War, he also helped in quelling the Daspalla and Keonjhar rebellion.

The administration of the State is conducted under the personal supervision of the Raja Saheb. He is easily accessible to all his subjects and gives a patient hearing to those who seek redress from him. He takes keen interest in improving the administration and conducting it on modern lines.

The State maintains an independent judiciary. There is a Municipality at the headquarters of the State which is controlled by a Committee of Officials and non-officials. Roads are lighted by electricity. Education is compulsory in the State. There are 75 primary Schools, one H.E. School and one Sanskrit Vidyalaya. There are six dispensaries including one travelling dispensary and one Ayurvedic Dispensary.

The State is noted for its coal mines which cover 224 square miles of which 8 square miles are now being worked by Railways and a Bengal English Firm.

Area of the State : 399 square miles. *Population* : 69,702 souls.

Annual Income : Rs. 5,73,083 (gross).

Heir Apparent : Yuvaraj Sree Hruday Chandra Deb, born on 27th February 1902. Educated in Ravenshaw College, Cuttack. At present in charge of the Judiciary in the State.

Pattayat : Promode Chandra Deb, second son of the Ruler and Revenue Minister.

Secretary : Babu J. Mishra.

THANADEVI:
DARBAR SHREE WALA
AMRA LAXMAN, the
present ruler of Thanadevi,
(Western Kathiawar Agency)
belongs to the Jaitani branch
of the Wala Kathis.

Born : 28th November 1895.
Educated at the Rajkumar
College, Rajkot.

Succeeded to the Gadi : On
12th May 1922.

Thanadevi is the premier
State of the Wala branch of
the Kathi clan. It was separated
from the Taluka of Jetpur
in about 1890 A.D.

The Darbar Sahab exercises
full civil and criminal jurisdic-
tion over his subjects. He takes
keen interest in the adminis-
tration of the State. He is
readily accessible to all those who seek redress from him. He has the
welfare of his subjects at his heart and his keen devotion to duty has
won for him their love and affection.

A fully equipped new hospital with provision for indoor patients
is in course of construction. There are altogether thirteen schools
including Middle and Vernacular. Education is imparted free through-
out the State.

The cultivators are given permanent occupancy rights over their
holdings and full ownership over properties is allowed to other subjects
as well. Arrears of revenue amounting to Rs. 25,000 were remitted
on New Year's day. A remission of Ans. 6 in the rupee is granted
to those who are ready to pay up their past debts.

Heir-apparent : K. S. RAMAWALA. *Educated* at the Rajkumar
College, Rajkot and Mayo College, Ajmer. He is at present receiving
education under a competent private tutor.

Second Son : K. S. GIGAWALA.

Area of the State : 117.32 square miles.

Population : 16,005 as per 1931 census.

Revenue : Rs. 350,000.

CHIEF OFFICIALS.

Chief Karbhari : MR. BALUBHAI G. PATWARI.

Huzur Secretary : MR. KUSUMRAI J. DEWAN, B.A., LL.B.

Nyayadhish : MR. N. L. PAREKH.

Chief Medical Officer : DR. M. D. LATHIGARA, M.B., B.S.

Superintendent of Police : MR. RAWATWALA.

TONK: HIS HIGHNESS SAID-UD-DAULAH WAZIR-UL-MULK NAWAB HAFIZ SIR MOHAMMED SAADAT ALI KHAN BAHADUR SOWLAT-I-JUNG, G.C.I.E., Nawab of Tonk State (Rajputana), is an Afghan of the Buner tribe known as Salarzie.

Born : 1879.

Ascended the Gadi on 23rd June 1930 on the death of his father H. H. Sir Mohammed Ibrahim Ali Khan Bahadur, G.C.S.I., G.C.I.E.

Educated : Privately and is an Arabic and Persian Scholar.

Area of State : 2,553 square miles.

Population : 317,360 according to census of 1931.

Revenue : Rs. 23,00,000.

Salute : 17 guns.

During His Highness' rule many reforms have been introduced in the administration of the State, the most important being the separation of the Executive and the Judiciary by the establishment of a Chief Court and a Sessions Court.

The administration of the State is carried on by His Highness with the help of the State Council, which has also recently been reorganised and put on a firmer constitutional basis by the passing of the State Council Act. The personnel of the State Council is as follows :—

President : HIS HIGHNESS THE NAWAB SAHIB BAHADUR.

Vice-President and Finance Member : MAJOR R. R. BURNETT, O.B.E., I.A.

Home Member : KHAN BAHADUR SZ. MOHD. ABDUL TAWWAB KHAN.

Judicial Member : KHAN BAHADUR SHEIKH RAHIM BUKSH, O.B.E.

Revenue Member : M. SHEIKH GHULAM MOHD. BAHAUDDIN.

Secretary : M. HAMID HUSAIN, B.A.

TRAVANCORE: HIS
HIGHNESS SRI
PADMANABHA DASA
VANCHI PALA SIR RAMA
VARMA KULASEKHARA
KIRITAPATI MANNEY SULTAN
MAHARAJA RAJA RAMARAJA
BAHADUR SHAMSHER JANG,
G.C.I.E., Maharaja of
Travancore.

Born : 7th November 1912.

Ascended : The Musnad
1st September 1924.

Invested with Ruling
powers 6th November 1931.

Educated : Privately.

Heir : HIS HIGHNESS
MARTANDA VARMA ELAYA
RAJA.

HIS HIGHNESS IS COLONEL-IN-CHIEF of the Travancore State
Forces.

Travancore is one of the largest Indian States in South India under the Political control of the Government of India. It is bounded on the North by the State of Cochin and the District of Coimbatore, on the East by the Districts of Madura, Ramnad and Tinnevely and on the South and West by the Indian ocean and the Arabian Sea. Travancore has an area of 7,625 square miles and according to the census of 1931, the population is 5,095,973. The State now stands in the forefront of educated India. According to the census of 1931, the number of literates per 1,000 of the population excluding children under 5 years of age is 289. For males the figures are 408 per 1,000, and for females 168. The Ruler of Travancore is the source of all authority, judicial, administrative and legislative. The government of the country is conducted in the name and under the control of His Highness the Maharaja. There is a legislature consisting of an Upper and a Lower House, with a majority of elected members and possessing large legislative and financial powers and powers of interpellation.

The Dewan is His Highness' sole minister.

BANERA: RAJA AMAR-SINGHJI of Banera Estate (Rajputana) belongs to the Sisodia Clan of the Udaipur House.

Born : 2nd August, 1886.

Married : To the sister of the Maharaja of Surguja.

The founder of the family was Raja Bhimsinghji I, son of Maharana Rajsinghji I, who according to his father's wishes gave up all his rights to the gadi of Udaipur in favour of his younger brother Maharana Jaisinghji. Raja Bhimsinghji, rendered meritorious services in the battle against the then Moghal Emperor and the battles of the Deccan and he was later enlisted as a Mansabdar and honoured with the title of Raja by the Moghal Court. The present Raja Amarsinghji of Banera is eleventh in descent after Raja Bhimsinghji.

The Raja Saheb has improved the administration of the Estate on modern lines. Revenue settlement has been made and arrears of the cultivators amounting to three lacs of rupees have been remitted. To help cultivators there is an Agriculturists Bank and new tanks are also constructed. There is one middle school and several other schools in the Raj to spread education and liberal scholarships are awarded to those who go out for higher studies. In the town of Banera there is a Hospital with an indoor patients ward attached to it where thousands of patients are treated yearly. Free medical aid is afforded to the poor and travelling compounders distribute medicines in the villages.

The Raja Saheb is a member of the Mahendraj Sabha, the Rajput Hitkarani Sabha and the Kshatriya Vidya Parcharni Sabha. He was also a member of various important commissions.

The Raja Saheb pays an official visit during Dassera every year to H. H. The Maharana of Udaipur who comes to receive him outside the City Gate, and there are certain special privileges enjoyed only by Banera House.

Heir-Apparent : RAJKUMAR PRATAP Singhji. He has passed the Diploma Examination and assists his father in administration. Rajkumars Mansinghji and Gumarsinghji are his other sons.

The House of Banera has had matrimonial alliances with such States as Jaipur, Jodhpur, Bikaner, Kotah, Bundi, Idar, etc.

Area of the Estate : 250 square miles.

Population : 28,115 in 1931.

**BHINGA ESTATE : RAJA
BIRENDRA KANT SING
OF BHINGA RAJ.**

Born : 25th September 1881.

Educated : at the Colvin Taluqdar's College, Lucknow. During his early age he took keen interest in sports and won several prizes in tent pegging and riding. He also won a silver medal for good conduct.

In 1926 the Estate came in possession of his revered father Raja Rajendra Bahadur Singh who led a retired and pious life, and delegated all his powers and authority to the present Raja. He is eighth in descent from the founder of the Raj.

Raja Birendra Kant Singh was a Honorary Magistrate and Vice-President of Bhinga Notified Area Committee for several years when it was an official Committee. He is very sympathetic towards his tenants and takes great interest in their welfare. His keen devotion to duty has won for him the love and affection of his tenants. During the famine of 1929 and 1933 he opened several relief centres in the Estate. He has donated several thousand rupees towards Educational Institutions and Charitable Dispensaries. Several poor and deserving students receive scholarships from him. On the occasion of the celebration of His late Majesty's Silver Jubilee he relieved the burden of his tenants by remitting their rents amounting to about Rs. 52,000. He also made a liberal contribution to the Jubilee Fund. The construction of a Club House and a memorial in front of his palace in memory of his revered father besides other buildings of public utility are among the benevolent works of the present Raja Sahab.

The Rajas of Bhinga belong to the Bishen clan of Kshatriyas who trace their origin from the devotee Mayur Bhatta. In Oudh there are thirteen Chiefs of this clan, with the Raja of Majhowli in Gorakhpur, as their avowed head. It is more than three hundred years since Pratap Mal, the second son of Raja Urip Mal of Majhowli, at the instance of the then ruling power, came and settled in Oudh and founded the Gonda Raj. Mansingh who was the third in descent from the founder, had the title of Maharaja conferred on him by the Emperor Akbar and he was also granted the privilege of creating twenty-two Rajas by placing the tilak on their forehead. Ram Singh, the third in descent from Mansingh, had two sons and the younger Bhawani Singh was the founder of Bhinga Raj.

Raja Udai Pratap Singh, seventh in descent from Bhawani Singh, enhanced the reputation of the Estate by his benevolent acts. He

was one of the few Taluqdars who was granted the privilege of private interviews with the Viceroy of India and the Royal Princes of England when visiting Lucknow. In 1887 the Government of India presented him with a cannon. He was exempted from the operations of the Arms Act and from personal attendance in courts. Raja Udaipratap Singh retired from active public life in 1895. He was very liberal and philanthropic. Even after his retirement he endowed 10½ lakhs of rupees for the Hewett Kshatriya High School, Benares, together with a further expenditure of 3½ lakhs in land and buildings. The foundation stone of this building was laid by the then Lieutenant-Governor of U.P. who in the course of his address remarked : " Though the public and the Government are the poorer for his withdrawal from wordly affairs, in the conduct of which in his younger days he distinguished himself, we can rejoice that in his retirement his interest in the well being of the community to which he belongs remains as great as ever and that he has out of his bounty given so largely towards its amelioration." The name of Raja Udaipratap Singh of Bhinga will remain a household word among the Kshatriyas for whom he has done so much, as well as among those members of other communities who admire an upright life full of good and benevolent deeds.

Another of his notable benefaction was the foundation in 1898 of an Anathalaya or asylum at Benares for the maintenance, irrespective of caste or creed, of persons afflicted with or rendered helpless by age or bodily infirmity. He also made numerous other public contributions amounting to nearly three lakhs of rupees, the chief among which are :

Kshatriya Upkarini Mahasabha—Rs. 35,000 ; " Kshatriya Mitra " Rs. 35,000 ; for founding Bhinga Raj Kshatriya scholarship Rs. 80,000 ; Edward Scholarship Rs. 30,000 ; Rs. 11,100 for sending a Kshatriya graduate to Oxford or Cambridge University ; Rs. 37,000 for a charitable dispensary ; Rs. 16,000 for a school ; Rs. 10,000 for Municipal and other works ; Rs. 7,000 for famine relief ; Rs. 5,000 for the Cooper Bazar. These were contributed for the benefit of the people of Bhinga, but his generousities were not confined to his own community or the tenants of his Estate. He contributed Rs. 12,000 for the Loyall Hall at Bahraich, Rs. 20,000 for the Colvin Institute at Lucknow, Rs. 10,000 for the Indian Relief Funds, Rs. 5,000 for the Medical College, Lucknow, and Rs. 1,800 for the Nagri Pracharni Sabha at Benares.

Raja Udaipratap Singh died in July 1913 and was succeeded by his wife Rani Murari Kumari Devi. She followed the footsteps of her husband and contributed Rupees six lakhs for raising the Hewett Kshatriya School to the intermediate standard and named it Udaipratap College after her husband. She rendered valuable services to the British Government during the Great War in recognition of which she received a medal and Sanad from the local Government. The title of Maharani was also conferred on her. She died in April 1926 and the estate came in possession of Raja Rajendra Bahadur Singh, brother of Raja Udaipratap Singh and father of the present Raja Saheb. He died on 10th November 1933. The title of Raja is hereditary.

Address : Bhinga Raj, Dist. Bahraich.

BHINAI: RAJA KAL-YAN SINGH of Bhinai Estate, Ajmer-Merwara, Rajputana.

Born : 20th October 1913.

Succeeded : To the Gadi on the 6th October 1917, on the death of his father Raja Jagmal Singh and is the 9th successor to the Bhinai Raj.

Educated : At the Mayo College, Ajmer, where he studied for 12 years. Having successfully passed the Diploma Examination in April 1931, he studied for the Higher Diploma Examination for three years. After receiving practical training,

he was invested with powers on 20th October 1934.

The Raja Saheb takes very great interest in the administration of the Estate. The accounts and revenue branches have been reorganised on modern lines and for the completion of the Field Survey of the Estate the existing staff has been increased by new appointments.

Married : The 3rd daughter of the late Rao Raja Bahadur Shri Madho Singhji, K.C.I.E. of Sikar in 1931. Has one daughter, born in February, 1935.

Family History : The rulers of this family are Rathore Rajputs descending from Rao Jodha, the founder of the city of Jodhpur (Marwar). Karamsen, the grandson of Rao Maldeo (1581), was the head of this family. He came to Ajmer, and having by stratagem intoxicated Madlia, the Chief of a band of Bhils, who ravaged the country near Bhinai, slew him and dispersed his followers. For this service Bhinai and seven other Parganas were bestowed upon him in Jagir by Emperor Akbar. Subsequently, the title of Raja was bestowed on Bhinai House in 1783 by the then ruler of Jodhpur as a reward for military service. The head of this house is the premier Raja of the district.

Annual Revenue : Over Rs. 1,00,000.

Area : 122 square miles.

Recreation : Polo, Squash and Hockey.

DINAJPUR: THE HON'BLE
MAHARAJA JAGADISH
NATH RAY, F.R.S.A.,
of Dinajpur.

Born : December 28th, 1894.

Educated : At the Hindu School
and Presidency College,
Calcutta, and has also had
military training.

The Maharaja Saheb was for several years the Chairman of both the District Board and Municipality of Dinajpur. He is a Vice-President of the British Indian Association and President of the East Bengal Landholders' Association. He was elected a member of the Bengal Legislative Council in 1930 and became nominated as a member of the Council of State in 1933. His speeches in the Council always breathe an air of freedom from fear or favour.

Raja Ganesh, the ostensible founder of the Dinajpur Raj, defeated the Mussalman ruler of Bengal and occupied the *mussnad* in the beginning of the 15th century. The Raj descended in 1642 from the Dutta family of Ganesh to Raja Sukdev Ray, a scion of Ghosh family, forming part of the same class of Kayasthas. Sukdev's son Prannath was given the title of Maharaja Bahadur by Emperor Aurangzeb, and his grand-son Ramnath obtained it as a hereditary distinction in 1745. Maharaja Bahadur Radhanath's sanad was given under the hand and seal of the first British Governor-General of Bengal. Shyammohini, the talented widow of Maharaja Taraknath, received the title of Maharani, and her son Maharaja Bahadur Sir Girdja Nath Ray, K.C.I.E., left the *gadi* in 1919 to his son, the present Maharaja.

The great temple of Kantanagar on the Dinajpur-Darjeeling Road—which Dr. Buchanan visited between 1807 and 1814 and declared as "by far the finest in Bengal,"—was built by the Maharaja Bahadurs Prannath and Ramnath Ray. Maharaja Jagadish Nath is a devoted Vaishnav and observes all customs and practices of the family with considerable veneration for the past.

Son and heir : MAHARAJ-KUMAR JALADHI NATH RAY.

Revenue Secretary : BABU NALINI MOHON SINHA.

Private Secretary : MR. SUDHANSU BOSE.

Home Address : Dinajpur Rajbati, E.B.R.

Calcutta Residence : P 210, Russa Road.

GHUZNAVI, THE HON.
ALHADJ NAWAB
BAHADUR SIR
ABDELKERIM ABU AHMED
KHAN, of Dilduar, Kt. *Born:*
25th August 1872.

Married: in 1894, Nawab Begum Lady Saidennessa Khanum. One son and four daughters.

Educated: at St. Peter's School, Exmouth, Devonshire; Wren and Gurney's Institution in London; Universities of Oxford and Jena (Germany). At an early age he was sent to a Public School in England. Appeared in the I.C.S. Examination in 1890. He has travelled almost all over the Continent of Europe where a number of years was spent in studying the indigenous

institutions in France, Germany and Italy. He knows French, German and Italian languages.

He returned to India in 1894 and settled in his estates, handed down by his ancestor Fatehdad Khan Ghuznin of the Lohani clan who succeeded his brother Osman Khan Ghuznin Lohani, the last independent Chieftain of Bengal. Represented the whole of Eastern Bengal and Assam in the old Imperial Legislative Council 1909-12 and the Muslims of Bengal in the Viceroy's Council 1913-16. Exempted from the Indian Arms Act 1925. Chairman, Bengal Provincial Simon Committee 1928 and General-Chairman, All-India Provincial Simon Committees 1929. Member Executive Council of Governor of Bengal, 1929-34. Minister of Government of Bengal in 1924 and 1927. Was instrumental in saving the historic town of Sirajgunge from engulfment by river. Initiated a "Waterways Trust" for Bengal and many other far-reaching constructive works in all the Government Departments under his charge, some of which are now bearing fruit.

In 1913, he went on a political mission to the late Ex-King Hossain of the Hedjaz as well as to Palestine and Syria to enquire into the question of Pilgrim Traffic. In 1931, he visited as State Guest, the Court of King Ibn Saud of the Hedjaz and Nejd and thereafter travelled extensively in Sudan, Egypt, Palestine, Syria and Iraq in order to study irrigation problems and other matters connected with the constitution of those countries. He is writing a memoir of his tours, which will be illustrated with photographs taken by his son, Alhadj Mr. I.S.K. Ghuznavi, B.Sc., who accompanied him.

Publications: "Pilgrim Traffic to the Hedjaz and Palestine (1913)"; "Muslim Education in Bengal"; "The Working of the Dyarchical System in Bengal (1928)," etc.

Address: Lohani Manor, P. O. Lohanisagardighi, Mymensingh, Bengal; North House, P. O. Dilduar, Mymensingh, Bengal;
Club: Calcutta Club, Calcutta.

JEHANGIRABAD: Raja Sir Mohammad Ejaz Rasul Khan, Kt., C.S.I., Taluqdar of Jehangirabad, Dt. Barabanki, India.

Born 28th June 1886; Son of Sheikh Fida Rasul Khan Saheb.

Educated Colvin Taluqdars' College; at home.

Raja hereditary title, *vide* F. D. Notification dated 22nd June 1897.

Recreations : Tennis, Polo and Shooting.

Address : P. O. Jehangirabad, District Barabanki, and Jehangirabad Palace, Lucknow, U. P. India. Telephone : Lucknow Exchange 37. Club : United Service Club.

JOGENDRA SINGH, SIR, KT., comes from an old military family of the Amritsar district—is also a Taluqdar of Oudh.

Born : On the 25th of May 1877.

Educated : Privately at home.

From early life he has been interested in agricultural development, education and social reform. Under the guidance of the late Mr. B. M. Malabari and Mr. George Chesney of the "Pioneer", he began regular contributions to the press, and his writings attracted notice. He occupied his leisure hours in writing, reading and riding. Early in life he was called upon to work as a Minister for the young Maharaja of Patiala. Lord Hardinge spoke of Sir Jogendra Singh in high terms in a speech which he made at a dinner in Patiala. After about 2½ years in Patiala, he returned to agriculture again. He joined the Council of State when it was first constituted. In the meanwhile, he wrote several books and edited *East and West* and was President of the Sikh Educational Conference and Member of the Indian Sugar Committee, the Indian Taxation Enquiry Committee, Sandhurst Committee and many provincial Committees in the United Provinces and the Punjab. In 1926 he became Minister of Agriculture in the Punjab—an office which he still holds.

K HALLIKOTE AND
ATAGADA ESTATES :
RAJA SRI RAMACHANDRA
MARDARAJ DEO of Khallikote.

Born : January 1900. His father, the late Raja Harihara Mardaraj Deo belonged to the Rana family of the Solar Dynasty and was famous for his philanthropic works, munificent gifts and steady loyalty to Government. He endowed the college at Berhampore with a lakh of rupees, presented to the Berhampore Municipality a spacious Town Hall and was the founder and patron of the Khallikote College. He earned the title of Raja in recognition of his good public service. The move for the creation of a separate province for the Oriyas originated with Raja Harihara Mardaraj Deo.

Educated : At the Newington Institution and the Madras Christian College.

The Estates of Khallikote and Atagada are the richest in the Ganjam District. The Raja Saheb has been able to annex a new property called the Biridi Estate this year. He occupies various posts of trust and responsibility both in the district and outside it. He is a member of the Madras Legislative Council and President of the District Board of Ganjam and the Ganjam Landholders' Association and he has rendered distinct services to the District. He represented the Madras Presidency and gave valuable evidence at the Indian Auxiliary Force and Territorial Force Committees in 1924. He was Lieutenant in the Indian Territorial Force for about 4 years. The young Raja holds advanced and broad views on social, religious and political matters and while at the College rendered immense service during the famine in 1919. He is a keen huntsman and a good Shikari.

The Raja Saheb gave very effective and sound evidence before the O'Donnell Committee appointed to enquire into the possibilities of having a separate province for the Oriyas. He was invited for the 3rd Round Table Conference and also to the Joint Parliamentary Committee.

The Title of Raja (personal) was conferred in June 1929, and in appreciation of the Raja Saheb's public work this title was made hereditary by the Governor-General in 1934 which he rightly deserved.

KISHUN PERSHAD—
RAJA-I-RAJAYAN, MAHA-
RAJA BAHADUR,
YAMIN-US-SULTANAT, SIR,
G.C.I.E., HEREDITARY PESH-
KAR, Prime Minister from
1901 to 1912, and President
of the Executive Council
of Hyderabad State from
25th November 1926.

Born : 28th January, 1864,
direct descendant of Maha-
raja Chandoolal, the first
Hyderabad Statesman to have
realised the importance of
alliance between his sovereign,
the Nizam, and the British
Power and who laid down the
tradition for charity and

philanthropy in the family. Maharaja Sir Kishun Pershad lives up to these two ideals of the House. He was educated first at the Nizam's College and then privately in Persian and Arabic, particularly in the teachings of Sufism. Under the nom-de-plume Shad he loves to write verses both in Urdu and in Persian, mostly lyrics full of mystical thoughts. He has also written many works in prose but mainly in Urdu. Besides literature, his present hobby is sketching, particularly landscapes in water colours. Maharaja Chandoolal as a descendant of Todar Mal, the Minister of Akbar, culturally belonged to the School of Akbar. According to the tradition of the House and the custom of intermarriages inaugurated by Akbar, Maharaja Sir Kishun Pershad has married both Hindu and Moham-madan ladies.

Heir : RAJA BAHADUR KHAJA PERSHAD also called RAJA BAHADUR ARJUN KUMAR.

Born : 17th May 1914.

Area of the Jagir : 490 square miles.

Population : 1,23,691.

The Jagir consists of 8 Taluqas with 196 villages and has the Sessions powers as well as full powers in civil.

Revenue : Rs. 10,16,003.

MR. GUNDE RAO is the Estate Secretary and Session Judge.

KRISHNAMACHARIAR, RAJA BAHADUR G., B.A., B.L., Dewan Bahadur (1918); Raja Bahadur (1925); Retired President of H. E. H. the Nizam's Judicial Committee, Landholder and Advocate, Madras and Hyderabad High Courts, and Member, Legislative Assembly.

Educated : Trichinopoly and Madras.

Enrolled as Vakil, Madras High Court, March 1890; practised as Vakil in Hyderabad and Secunderabad till 1913. Was appointed Government pleader and Public Prosecutor at the Residency in 1904. Was nominated non-official member of the Hyderabad Legislative Council for three successive terms (6 years); appointed Advocate-General, then Secretary to Government, Legislative Department; Legal Adviser to H. E. H. the Nizam's Government and President, Judicial Committee in 1913. Was the joint author along with the late Hormusjee and Sir Ali Imam of the Constitution of Hyderabad under which the Government is at present working. Represented Hyderabad in the Sub-Committee of the Chamber of Princes 1918. Was appointed President of the Hyderabad Factory Commission. Retired in 1924. Entered the Legislative Assembly during the elections of 1930 and took a prominent part in the support of orthodox views and resisting all anti-religious and anti-social Bills. He was the leader of the Centre Party in the Legislative Assembly and was invited by His Majesty's Government to join the Committees on Reserve Bank and the Statutory Railway Authority but could not for reasons of health and religion go to England. He took keen interest on agricultural and Land Revenue questions and was unanimously elected President of the Rural group in the Assembly which he formed in 1934. He is now the acknowledged leader of the entire orthodox community in India.

Address : Hyderabad House, Srirangam; Osmania Royal Avenue, Hyderabad, Deccan.

KUMAR GOJIKA ROMON ROY OF DEWAN MANIKCHAND ESTATE is the only son of the late Raja Girish Chandra Roy Bahadur of Sylhet—8th successor of the late Rayan Rajaram, first Governor of the Province of *Sylhet* after the Moghul annexation of Bengal under Akbar the Great. The predecessors of Rai Rayan Dewan Rajaram came to Bengal with Raja Man Singha, the Commander-in-Chief of Emperor Akbar as military officers. After the annexation of Bengal they stayed at Raj Mohal with the Moghul Army. The ancestral home of Rai Rayan Rajaram was originally at Jodhpur in Rajputana. From Raj Mohal the services of the father of Rai

Rayan Rajaram was requisitioned by the Subedar of Bengal. After the annexation of the Province of *Sylhet* (now Sylhet) from Raja Gour Govinda, Rajaram was first sent from Murshidabad as Dewan (the Governor) with the title of Rai Rayan. He was succeeded by his son Rai Rayan Mukut Malla who was Dewan of the Province till his death. During the regime of Rai Rayan Dewan Manikchand of the most illustrious fame and the 4th in descent, the whole of the Province of *Sylhet* was handed over to Capt. R. Lindsay, the then Political Agent of the East India Company on the 12th January 1778 and his son Dewan Murarichand acted as Dewan under the Company. Dewan Murarichand was succeeded by his daughter and then by her son Raja Girish Chandra Roy Bahadur who was the pioneer of Education and Tea Plantation in this part of the country. He founded first the Girish Middle English School in 1876 and the Murarichand Collegiate School in 1886. The School was named afterwards Raj Girish Chandra High School. He was the founder of Gour Charan Mazumdar and Brojosundari Choudhurani Memorial Wards in memory of his illustrious parents in the Government Charitable Dispensary, Sylhet. Raja Girish Chandra Roy died in April 1907 and was succeeded by his only son Kumar Gopika Romon Roy.

Born in August 1890.

Educated: Murarichand Collegiate School, Sylhet, which was founded by his father.

Married first Kumrani Sucharu Bala Roy Choudhurani in 1911 and secondly on the 6th June 1920 to the illustrious Kumrani Shuruchi Bala Roy Choudhurani.

Life Member, Governing Body of the Murarichand College, Sylhet. President, Governing Body, Raja Girish Chandra High School, Sylhet. President, Governing Body, Public High School, Karimganj, etc.

Member, Calcutta Literary Society. Author of "Jugabatar Sree Krishna," "My Experiences in the Indian Politics" and several other Dramas. Chairman, Sylhet Municipality, 1923. He was awarded a gold medal and a certificate for his histrionic talents in the Sylhet Exhibition in 1923 from Government; also received numerous gold medals from the Calcutta and Sylhet public as a dramatist. Elected uncontested to the Assam Legislative Council, 1929. Ex-Officio President, Surma Valley Landholders' Association, from 1930. Member, Bengal Landholders' Association. Only delegate from Assam Landholders to All-India Landholders' Deputation to the Viceroy, New Delhi, 1930. Presided over Sylhet Local Bodies Conference, 1930. Elected uncontested to the Legislative Assembly, 1931-34. He carried the Assam-Bengal Railway non-official Resolution unanimously which was unique of its kind in the History of the Assembly.

Donor and contributor of Rs. 25,000 to King Edward Memorial Fund; during the Great War 1914-1918 he contributed Rs.

1,000 to the War Relief Fund and Rs. 1,000 to the Our Day Fund; and Rs. 25,000 to the Sylhet Cachar Flood Relief Fund. A Ward has been established in the illustrious name of his mother Rani Prosanna Mayee Roy Choudhurani in Mitford Hospital, Dacca. He built a flight of stairs in memory of his mother for convenience of the pilgrims in the in surmountable Chandrnath Hills in Sitakunda, Chittagong Division. He maintained the Murari-chand College till it was provincialised and Raja Girish Chandra High School till it was taken up by the Government as Aided School.

Kumrani Shuruchi Bala Roy Choudhurani.

Kumrani Shuruchi Bala Roy Choudhurani, wife of Kumar Gopika Romon Roy, daughter of late Mr. Rajendra Narayan Choud-

hury, Bar-at-Law, Zemindar, Mechpara, Assam and Ex. M.L.C., Assam and late Pramila Sundari Choudhurani of Bagribari, Assam.

Born in 1901.

Educated in Diocesan College, Calcutta. Passed the Intermediate Examination in Arts at the Calcutta University in the year 1920.

She is the only authoress in Assam and has written in Bengali several novels and short stories which were published in Calcutta. Donor of Rs.

10,000 for founding a Maternity Home in Karimganj Sub-Division. Organiser of several beneficial Organisations in the District.

Only son and heir: Kumar Gourish Chandra Roy.

Address:—Rajbati, Sylhet.

KUREISHY: RAFIUSHAN IFTIKHARUL MULK, KHAN BAHADUR, LT.-COL., HAJI MAQBOOL HASSAN, M.A., LL.B., Minister for Law and Justice, Bahawalpur Government and Minister-in-Waiting to H. H. The Nawab Ruler Bahadur, Bahawalpur State, belongs to a respectable family of the Kureish of Arabia. Though hailing originally from the Meerut District his ancestors had long settled in the State before he was born at Bahawalpur in 1900. He received his early education in the State, and, later on, joined the Muslim University, Aligarh, where he passed his M.A., LL.B. in 1925. From his earliest childhood he exhibited traits which gave promise of his future career.

His personal magnetism made itself felt in the sphere of his employment, where he won the golden opinions of his colleagues as well as the ruler under whom he served. He began his career in 1925, when he joined the personal staff of His Highness the Nawab Ruler Bahadur of Bahawalpur as an Aid-de-Camp. But, it did not take long to discover that the young incumbent had in him the makings of a capable administrator. Accordingly, in 1927 he was promoted to the rank of Assistant Military Secretary. But this was only a stepping stone, as in January 1930 he was given the combined office of the Private and Military Secretary, with the additional charge of the portfolios of Education and Municipalities, and was, subsequently, raised to the status of Minister-in-Waiting.

In 1932 he paid a visit to England and other Western countries in company with His Highness the Nawab Ruler Bahadur—a visit which he repeated again in 1935. The beautiful volume in which he has chronicled the impressions of his first itinerary is an eloquent testimony of his great powers of observation and expression. He has also been to the Near East and performed the holy pilgrimage.

Recently, his services to the State have been recognised by the Government by the grant of the title of Khan Bahadur, which is the first distinction of its kind to be conferred upon a purely Riyasti Vizier in the State. He is also the recipient of many decorations and distinctions from the State, and is a member of the Court of Muslim University, Aligarh and His Highness the Nawab Ruler Bahadur's representative in the Senate of the Punjab University.

During the 6 years of his incumbency he has introduced many useful administrative reforms in the departments under his control, particularly the Municipalities, which he has completely reorganised. He is a very capable and efficient administrator, having won the highest praise of both the ruler and the ruled by his politeness, impartiality, and keen sympathy with the people of the State. He is immensely popular with all classes of His Highness's subjects.

LIAQAT HYAT KHAN:
 AITMAD-UD-DOULA,
 VIQAR-UL-MULK, NAWAB,
 Sir, Kt., O.B.E., K.B., Prime
 Minister, Patiala, is the eldest
 surviving son of the late Hon'ble
 Nawab Mohammad Hyat Khan,
 C.S.I., of Wah in the Attock
 District of the Punjab.

He entered the Punjab
 Government Service in 1909
 as a Deputy Superintendent
 of Police and received unusually
 early promotion to the Imperial
 Police where he held several im-
 portant appointments with con-
 spicuous success. His services
 were recognized by the grant
 of the King's Police Medal and
 the titles of Khan Bahadur
 and O.B.E., as also a grant
 of land from Government.

In 1923 his services were lent to His Highness the Maharaja
 Dhiraj of Patiala as Home Secretary, but His Highness soon raised
 his status to that of Home Minister placing under his control the
 administration of some of the most important Departments in the
 State. In 1928 his meritorious services to the State were recognised
 by Government by the grant of the high title of "Nawab" which
 is now a rare distinction.

After seven years' loyal and efficient service to the State His
 Highness was pleased, as a mark of favour and appreciation, to appoint
 the Nawab Sahib as his Prime Minister and confer upon him the
 following honours and rewards:—

- (1) Title of Aitmad-ud-doula, Viqar-ul-mulk, "Nawab" and
 Tazim (Hereditary).
- (2) Jagir and Biswedari yielding an annual income of Rs. 51,000
 (Hereditary).
- (3) Cash reward of Rs. 1,01,000.
- (4) First seat in Darbar to the left of the Gadi (Masnad-i-Shahi),
 (Hereditary).
- (5) Khillat of Rs. 1,700 on all Khillat occasions for him and
 his heirs.

He represented the State twice at the Round Table Conference
 and again as a delegate to the Parliamentary Joint Select Committee.
 In January, 1933, His Majesty the King-Emperor conferred upon
 him the honour of Knighthood.

In October, 1934, His Highness conferred upon him the Honorary
 rank of General in recognition of meritorious services.

During the last ten years the Nawab Sahib has introduced many
 important reforms in the State, and has proved himself to be a very
 capable and efficient administrator and a statesman of high order.
 His politeness, impartiality and keen sympathy with the people of
 the State have made him immensely popular with all classes of His
 Highness's subjects.

MOHIUDDIN FAROQUI, NAWAB, SIR, the only son of Kazi RAYAZUDDIN MUHAMMAD FAROQUI, was born in the year 1891 and belongs to one of the few historic families of Bengal. He is the eleventh in descent from Kazi Omar Shah Farouqi, a linea descendant of Hazrat Omar Farouqi, the second Khalif of Arabia, who migrated to India and settled at Delhi. He was sent out to Bengal as a military commander by Emperor Furrokhshiar and in recognition of his meritorious services was given the grant of extensive Jaghir (rent-free-land) of two parganas in the district of Tippera in Bengal and the original Sanad conferring the Jaghir by

Emperor Furrokhshiar is still in the possession of Nawab Sir Mohiuddin.

Kazi Aftabuddin Farouqi, the grandfather of Nawab Sir Mohiuddin, rendered great help to the Empire at the time of the Sepoy Mutiny. His only son, Kazi Rayazuddin Muhammad Farouqi, the father of Nawab Sir Mohiuddin Farouqi, was recognised as the most influential Muhammadan leader and was highly respected by all communities, particularly for his extensive charities.

Nawab Sir Mohiuddin was educated at the Dacca College under the guardianship of Mr. Archibald, the Principal of the College. Even from a comparatively early age he developed a spirit of public service and a love for public life.

He was the first non-official Chairman of the Tippera District Board, a Commissioner of the Comilla Municipality, Member of the Assam Bengal Railway Advisory Board, Member of the Dacca University Court, an Honorary Magistrate and a Member of the Governing Body of the Comilla College for several years before he entered the arena of politics. As the Chairman of the District Board, he took a very active interest in the matter of communications and the results of his endeavours in this direction may now be seen in the improved roads and well-built bridges widely spread over the district. The Comilla Water Works and the Electric Supply, which have done inestimable benefit to the town, came into existence largely, if not absolutely, owing to the untiring efforts of the Nawab Sahib. A service of immense value that he did, while in the District Board, was the provision of rural water supply by boring tube-wells. He encouraged the spread of education, higher and primary, in his district and it was he who was instrumental in raising the Comilla Victoria College from the second-grade to the first-grade institution that it is to-day.

He has been a member of the Bengal Legislative Council since the

introduction of the Montagu-Chelmsford Reforms and was the non-official Chief Whip of the Council till he was appointed in 1929 Minister to the Government of Bengal in charge of Agriculture, Industries, Co-operation, Veterinary Department and Public Works. It is a matter of no little honour and distinction that he was elected by the Bengal Legislative Council to represent the Province in the Provincial Simon Committee where his services were acknowledged with great appreciation by the Rt. Hon'ble Sir John Simon. Nawab Sir Mohiuddin is the Leader of the House in the Council and this is perhaps the only and the first instance in the history of Provincial Councils that a Minister (who was returned as an elected member) has been made the Leader. The services that he has given as the Leader of the House, to the country and the Government are worthy of his trained sagacity, mature experience and wide knowledge of men and matters.

As a Minister to the Government Nawab Sir Mohiuddin has given effect to a considerable number of measures which have already had, or are likely to have in future, far-reaching results in improving the conditions of agriculture and industry of the Province. He introduced and successfully piloted the State Aid to Industries Act, a measure of great promise and usefulness, inasmuch as it affords an opportunity to small and nascent industries to grow up with aid, as far as possible, from the Government. His scheme for the relief of unemployment amongst educated middle-class young men is of great significance and is the first of its kind since the inauguration of the Reforms, intended to open up new avenues of employment through industrial development of the Province. The United Provinces Unemployment Committee, presided over by the Rt. Hon'ble Sir Tej Bahadur Sapru, P.C., K.C.S.I., LL.D., has in its report many words of praise for the scheme. He took steps to establish Co-operative Land Mortgage Banks for the relief of agricultural indebtedness and his scheme for restriction in the cultivation of jute with a view to fetch a better income to the cultivators has been a measure of immense benefit. He made serious endeavours to improve the animal husbandry of the Province and significant results are already available of the various agricultural researches taken up at his instance. The scheme for the training of detenus (persons detained for political reasons) in industrial and agricultural pursuits in order to afford them an opportunity to prove themselves useful citizens, is now having a trial and its results are awaited with interest all over India. The Water Hyacinth Bill, introduced in the last winter session of the Legislative Council, is likely to be another measure of great importance, adding to the already numerous achievements of Nawab Sir Mohiuddin.

He enjoys the confidence of all sections of the people in the Province. In recognition of his meritorious services and activities he was honoured with the title of "Khan Bahadur" in 1924, with that of "Nawab" in 1932. On the New Year's day, 1936, His Majesty late the King-Emperor conferred on him a Knighthood, a distinction which he richly deserved.

He married Quatrina Sultana Zobeida, eldest daughter of the Hon'ble Alhadj Nawab Bahadur Sir Abdelkerim Ghuznavi, Kt., of Dilduar, Ex-Member of the Executive Council, Government of Bengal.

MAHMUDABAD ESTATE :
RAJA MUHAMMAD AMIR
AHMAD KHAN, KHAN
BAHADUR, RAJA OF
MAHMUDABAD (OUDH), is the scion of a very noble family, distinguished in all periods of Indian History for piety, highest ecclesiastical, military, and administrative positions and power, since his ancestor Qazi Nasrullah, Qazi-ul-quzat (i.e. Grand Qazi) of Baghdad came to India in the reign of Emperor Shahbuddin Ghorī. He traces his descent direct from the first Caliph (Abu Baker).

Mahmudabad is the premier Muslim Estate in Oudh.

Emperor Jehangir confirmed it and bestowed a jewelled sword of Honour, Khalat and several pieces of jewellery which form the heirloom.

Estate : The estate comprises of villages in Sitapur, Bara Banki, Kheri and Lucknow districts.

Born : On the 5th November 1914.

Married : In 1927 to the Rani Saheba of Bilehra, a collateral branch of Mahmudabad; has two daughters.

Brother : MAHARAJ KUMAR MOHAMMAD AMIR HYDER KHAN, the younger brother of the Raja Saheb, who is living with him.

Succeeded : His father the HON'BLE MAHARAJA SIR MOHAMMAD ALI MOHAMMAD KHAN, K.C.S.I., K.C.I.E., on May 23rd 1931; was formally installed on the Gadi of his illustrious ancestors by H.E. Sir Harry Haig, K.C.S.I., C.I.E., the Governor of U. P. on the 4th January 1936.

Educated : In La Martinier College, Lucknow and under European and capable private Tutors at Home.

The present Raja is highly cultured and very broad minded. He has extensively travelled in Europe and the Near East. He knows English and Persian well, and is a very promising "Mar-sia" poet of Urdu. He is deeply interested in education, social reforms and Politics. Reading, Natural History, painting and photography are his chief hobbies.

Recreation : Riding.

Address : Butler Palace, Lucknow, Qaisarbagh, Lucknow, Galloway House, Naini Tal and Mahmudabad (Oudh).

NA W A B MUHAMMAD
MOIN-UD-DIN KHAN,

NAWAB MOIN-UD-DOWLA, BAHADUR, the only son of the late Nawab Sir Asman Jah Bahadur, one of the three great Paigah Nobles of the Hyderabad State, was born in Hyderabad (Deccan) in the year 1891. Nawab Moin-ud-Dowla's Paigah or feudal state covers an area of 1,821 square miles and has a population of 276,533, while its annual revenue amounts to Rs. 22 lakhs.

He carries on the administration with the help of a Council consisting of a President and two Members.

In 1919 Nawab Moin-ud-din Khan Bahadur was given the title of Nawab Eyanath Jung, and in 1922 the title of Nawab Moin-ud-Dowla. In 1923 he was appointed Minister in charge of the Industrial Department and also a Member of the Executive Council. The next year he was given charge of the Military Department and in 1927 he resigned the post, for, by an order of His Exalted Highness the Nizam, his Paigah Estates were released from the Court of Wards and he was made the Amir of the Sir Asman Jahi Paigah.

Though at one time a keen rider, Polo Player and Racing Noble, Nawab Moin-ud-Dowla Bahadur's present main recreation is shooting. He is also passionately fond of watching cricket, and he has done much to encourage the game and raise its standard not only in Hyderabad (Deccan) but in the whole of India. The All-India Gold Cup Cricket Tournament, which was started five years ago as a result of his munificence, attracts to Hyderabad most of the best Cricketers in India. The last M.C.C. and Australian fixtures in Secunderabad, Deccan, were also due to his keen interest in Cricket and his generosity.

NAWAB SALAR JUNG
BAHADUR (MIR
YUSUF ALI KHAN),
one of the premier noblemen
of Hyderabad, Deccan, and
the sole representative of
the illustrious family of
Sir Salar Jung the Great of
the Mutiny fame.

Born : 13th June 1889 at
Poona.

Educated : At Nizam
College.

Was Prime Minister
between 1912-15; has
travelled all over Europe,
Iraq, Persia, Syria,
Palestine, etc.; keeps a

Polo Team; has got a fine library; takes interest in the
Industrial Development of the country and is Director of
seven Companies.

Area of Estate : 1,480 square miles.

Population : 202,739.

Revenue : Over Rs. 15 lakhs.

Administration is divided into several departments on
modern lines, and is under the direct control of the Nawab
Saheb who personally supervises the work.

Family History : About the middle of the 17th century
the great-grandfather of the Nawab Saheb migrated from
Medina to the Adil Shahi kingdom of Bijapur where he
settled and married into a noble's family. After the fall of
the kingdom, the members of the family took service under
the Moguls. Later on they transferred their allegiance to the
family of the Nizams and served them as Prime Ministers,
who are as follows:—

(1) Shair Jung, (2) Ghayur Jung, (3) Dargah Khuli
Khan Salar Jung, (4) Mir Alam, (5) Munirul-Mulk, (6)
Sirajul-Mulk, (7) Sir Salar Jung I., (8) Sir Salar Jung II.,
(9) the present Salar Jung.

Address : Hyderabad (Deccan).

NAWAB KAMAL YAR JUNG BAHADUR, a nobleman of Hyderabad, is a son of the late Nawab Khan-i-Khanan. He owns an estate covering an area of about 312 sq. miles, having a population of 80,000 souls and yielding a revenue of about Rs. 6 lakhs annually. The estate is divided into four Talukas which comprise 90 villages.

Few families, that came out to India from Persia, have such a brilliant record of service to their credit as the one represented by Nawab Kamal Yar Jung Bahadur. His ancestors were Governors and Generals under Moghul Emperors and Shah Nawaz Khan was Prime Minister of the Deccan after the death of Asaf Jah I. Nawab Kamal Yar Jung Bahadur's father, who was Military Minister, was a brother-in-law of the late Sir Salar Jung, the famous Prime Minister of Hyderabad, and had accompanied the latter on a political mission to England where he was presented to the Queen-Empress and had the honour of dining with Her late Majesty.

Nawab Kamal Yar Jung Bahadur, received his education partly in Aligarh and partly at the Nizam College. He married a daughter of his uncle—the late Nawab Fakhru'l-Mulk II. In order to gain administrative experience, the Nawab worked as Assistant Home Secretary, Joint Registrar of the High Court and Inspector-General of the Registration Department. His age is 42. The Nawab's favourite subjects of study are history, politics and rural economics. He is a good writer and a convincing debator.

The administration of the estate is conducted on modern and progressive lines. Survey and Settlement Operations have been completed in the entire estate on lines obtaining in the Bombay Presidency. The estate possesses 24 schools, 8 dispensaries, 30 tanks, 117 ponds, 22 canals and 18,000 houses. It maintains a force, 160 strong, costing Rs. 25,000 annually. The Civil establishment consists of about 700 hands, including village officials, and costs about a lakh annually. On pensions, scholarships and gratuities, the Nawab spends Rs. 20,000 every year. All appeals against the Estate's Chief Executive Officer's decisions as regards assessment and Inam enquiries are heard by the Nawab Sahib himself and adjudicated in strict accordance with the principles of law and equity. The Nawab makes extensive tours of his villages, hears all complaints in person and keeps himself well-posted with the conditions obtaining there.

The Nawab's loyalty to the Nizam is proverbial. The relation of his house with the Residency has always remained cordial. His father and uncle were recipients of a Guard of Honour on the occasions of their visits to the Honourable the Resident.

Purtyal, a village in the Nawab's estate, contains diamond mines. The world famous *Koh-i-Noor* diamond originally came from the Purtyal mines—a reference to which fact is also to be found in Murray's "Handbook for Travellers in India, Burmah and Ceylon."

Deoni, a taluka in his estate, is a well-known market for bullocks. The fort of Ramgir, a relic of the ancient Andhra Kingdoms, is also one of his proud possessions and the Nawab is taking all possible steps to preserve it in its pristine glory.

The Nawab is fond of riding, rowing and reading. His Shameerpet Lake, about 18 miles from Secunderabad, is an attraction for excursionists.

NAWAB DAWOOD ALI Khan, Dawood Jung Bahadur, son of the late Nawab Sabit Ali Khan Bahadur, comes of an old and respectable muslim family in Hyderabad, Deccan. He traces his descent from Nawab Abdul Hassan Khan Mujahid Jung, Shah Nawaz-ud-Dowla Bahadur, who came to Hyderabad from Delhi with the great Nizam-ul-Mulk Asaf Jah, the first Nizam. Shah Nawaz-ud-Dowla Bahadur was a staunch adherent of Nizam-ul-Mulk and stood by him through thick and thin, and his ser-

vices were always highly appreciated by that great statesman and Ruler. Many members of his family held high and responsible offices in the State and one of them, Nawab Talibud Doula Bahadur was for many years Kotwal (Commissioner of City Police). He was the first Kotwal of the City and in this capacity he faithfully served Nawab Nizam Ali Khan Bahadur and Nawab Secunder Jah Bahadur, the second and third Nizams respectively. The Nawab's Services as Commissioner of Police in those turbulent days were highly appreciated by the then Rulers who conferred on him Jagirs and Mansabs as a mark of their royal favour.

Nawab Dawood Jung Bahadur's grandfather, Nawab Mirza Shamsuddin Khan Bahadur, popularly known as "Abban Sahib", unlike his predecessors was keenly interested in business and engaged himself mainly in commercial activities. His knowledge of business, study of the markets and transparent honesty in all his dealings soon earned for him a great reputation.

Maharaja Chandu Lal Bahadur, the then Prime Minister of Hyderabad, elevated Nawab Shamsuddin to the position of a Taluqdar. Subsequently when he was delegated to administer the districts of Aurangabad, Berar and Balaghat, he brought the administration to a high pitch of efficiency and increased the prosperity of the districts by his good management and business ability. He was a very philanthropic nobleman and spent quite a considerable amount of money on works of public utility. He manifested his loyalty to the ruler in a practical manner by

building an Abdar-Khana in the midst of an extensive garden in Koh-e-Moula in the eastern suburbs of the city where the ruler stayed during the time of his visit to the Moula Ali Uroos. Among his philanthropic works, a canal and a ghat stand out prominent. The former, in Khuldabad, was constructed anew out of the traces of a dilapidated canal of very ancient times. The ghat was almost impassable for travellers, but as it could provide an excellent exit to Burhanpore, Berar, Balaghat and Northern India, he incurred heavy expenditure in levelling and rendering it easily passable. The ghat is now known as Nizam Ghat. In addition to these, he built many Abdar-Khanas and Serais which serve as memorials to his name. Nawab Mirza Sabit Ali Khan succeeded Nawab Shamsuddin and added further lustre to the name of this family.

H. H. The late Nizam serenading in a procession from the Nawab's Garden at Moula Ali Hill.

Nawab Dawood Jung Bahadur, is one of the most popular members of this aristocratic family of Hyderabad. Inheriting the business ability of his father and grandfather, he manages his jagirs with wisdom and efficiency. He is himself very generous and liberal minded. He is social and easily accessible to his tenants. The Nawab Sahib takes keen interest in educational matters. His charity is not of the ostentatious type but springs from a heart which feels for humanity. He is generous not because his religion commands him to be so, but because his soul is allude to the finer issues of life and responds to their call, without effort and calculation.

He was awarded the title of Nawab Dawood Jung Bahadur on the occasion of the Birthday of His Exalted Highness in 1935. The present Nizam, His Exalted Highness Nawab Sir Mir Osman Ali Khan Bahadur has honoured the Nawab Sahib on several occasions by personal visits to his residence.

NANPARA ESTATE: RAJA SYED MOHAMMAD SAADAT ALI KHAN, the present Raja of. Born in the year 1904. Educated at the Colvin Taluqdars' College, Lucknow. His father Raja Syed Mohammad Ashfaq Ali Khan was a poet of great repute and author of many books. His late mother Rani Mohammad Sarfraz Begam of the Mohamdi estate, district Lakhimpur Kheri, Oudh, was well known for her efficient management of the Estate, and acts of benevolence.

During the Great War Rani Mohammad Sarfraz Begam helped the British Government with men and money. The Lucknow University owes her its gratitude for a substantial donation as

well as the King George's Medical College and the Prince of Wales' Zoological Gardens at Lucknow.

Raja Syed Mohammad Saadat Ali Khan possesses in him the literary qualities of his learned father and the managing capacity and generosity of his benevolent mother, to which he has added the vast experience of a traveller having visited many times the continent of Europe and the near East.

There are many Muslim organisations which are indebted to Raja Syed Mohammad Saadat Ali Khan for his financial help and guidance.

Raja Syed Mohammad Saadat Ali Khan is a sportsman in the real sense of the word. He is fond of shikar and is a good shot. He plays tennis, polo and swims. He is a member of several clubs in Paris, London and India. He is also a member of the U. P. Legislative Council, Vice-President of the British Indian Association of the Taluqdars of Oudh, President of the U. P. Provincial Moslem League and a patron of the U. P. Aero Club.

Raja Syed Mohammad Saadat Ali Khan also succeeded to the Nanpara Estate in the year 1911—thus bringing both the Estates of Nanpara and Mohamdi under his sway. Hence he is generally known as the Raja of Nanpara—a premier estate in the province of Oudh. The estate of Nanpara has a special reference to its history in the Gazetteer of the Bahraich district. Raja Sir Jang Bahadur Khan, K.C.S.I., maternal grandfather of Raja Syed Mohammad Saadat Ali Khan, can well be styled a personality of power and great influence. The title of Raja to the House was conferred in 1763 by Nawab Shuja-ud-Daula, King of Oudh, and recognised by the Government as hereditary. Both the Estates of Nanpara and Mohamdi are very old and reputed for their loyal traditions and royal history.

Revenue : 3 Lakhs.

PAHASU ESTATE:
NAWAB MUMTAZ-UD-
DOULAH MOHAMMAD
MUKARRAM ALI KHAN, of
 Pahasu. Born in 1895. He is
 the eldest son of Kunwar Ikram
 Ali Khan on whose premature
 death in 1914 he became the
 lawful successor to the estate.
 Succeeded in 1922 on the death
 of his illustrious grandfather,
 Nawab Mumtaz-ud-Doulah Sir
 Mohd. Faiyaz Ali Khan,
 C.S.I., K.C.I.E., K.C.V.O., C.
 B.E., Prime Minister, Jaipur
 State, Rajputana.

Educated at home and at
 the Maharajas College, Jaipur
 before being sent to the M.A.O.
 Coll., Aligarh where he soon
 came into prominence as an
 intelligent scholar, an upright youth, and a keen sportsman.

Married his first cousin in 1912 and later married again Mumtaz
 Begum, his second cousin in 1924.

The Nawab has travelled extensively both in India and abroad.
 He always made a keen study and minute observation of the economic
 development as well as the social and administrative side of the various
 countries and peoples he visited in England, France, Austria, Switzer-
 land, Italy, Egypt, &c.

As a member of the great Lalkhani clan, he traces his origin to the
 great solar kings of Ajodhya. A scion of this clan, Raja Lal Singh
 received the title of Khan from Akbar the Great which originated
 the title of Lalkhani. The house of Pahasu is noted for its steadfast
 loyalty to the suzerain power and deep devotion and unflinching attach-
 ment to the rulers of Jaipur, where his great grandfather, the first
 Nawab Mumtaz-ud-Doula Sir Mohd. Faiz Ali Khan, K.C.S.I.,
 and his grandfather the second Mumtaz-ud-Doulah, Nawab Sir Faiyaz
 Ali Khan, held the high offices of Prime Minister for a number
 of years and in recognition of their meritorious services received the
 Jagir of Raipur, yielding an annual income of Rs. 40,000 besides
 several palatial buildings and Tazim in perpetuity.

The estate of Pahasu which is one of the premier estates in the
 district of Bulandshahr consists of seventeen villages.

The Nawab was appointed an ordinary member of the Executive
 Council of Jaipur but owing to ill-health was forced to resign.

He is fond of motoring and loves poetry, music, fine art, &c.

Publications : Sada-i-Watan, Tanqeed Nadir : Swarajya Home
 Rule.

Address : Mumtaz Bagh, Jaipur (Rajputana) : Pahasu House,
 Aligarh : Fort, Pahasu, Dist. Bulandshahr.

PADRAUNA: RAJA BAHADUR BRAJ NARAYAN SINGH, RAJA OF PADRAUNA RAJ, in the Gorakhpur District (U.P.), was born in 1875 and succeeded his father, Raja Udit Narayan Singh, in 1900. This family of Gaharwar Kshatriyas came into prominence in the first half of the 17th century. In 1686 then head of the family, Rai Nath Rai, received a "Nānkār" grant of 33 villages and 5 Arms from Aurangzeb. The title of Raja Bahadur was conferred on the present Raja as a personal distinction in 1919 in recognition of

his meritorious services during the Great War, the title of Raja being hereditary. The Raja Bahadur is a second class Honorary Magistrate for life and was a member of the Provincial Legislative Council during 1924-26, where he proved himself to be a man of great tact and resourcefulness. He is liked both by Government and the public for his numerous services to them. His efficient management of the estate has often been considered a model in the Province. Among his great public benefactions in the estate may be mentioned Victoria Memorial dispensary, Peace Memorial Park, an agricultural bank, an Anathalaya, buildings for the local Vernacular Schools for boys and for girls, the latest being the Udit Narayan Kshatriya High School which has been endowed with property bringing an annual income of 8,000 and the foundation stone of which was laid by His Excellency the Governor of the United Provinces in November 1935. To commemorate the Silver Jubilee of His late Majesty King George V he has founded a Club and Library for the use of the public. He is a sincere religious man who makes the old family temple of Radha-Krishna a live centre of various activities throughout the year.

The estate comprises 460 villages in the district of Gorakhpur, Ballia, Ghazipur, Azamgarh and Champaran, and owns two sugar factories. The town of Padrauna can be said to possess most of the amenities of modern life including electricity.

PADRAUNA : RAI

**BAHADUR JAGDISH
NARAYAN SINGH,** the

younger brother of the Raja Bahadur of Padrauna, is his right hand and no account of him or of the estate can be considered complete without a mention of the prominent part he has taken in its amelioration. He was

born in 1885, and made a Rai Bahadur in 1923 for his meritorious services. He is an Hony. Munsiff for life and a widely travelled man. His tour of Europe, where he came in contact with many important personages has left a great impression on him. He is a born engineer and businessman. He introduced motor cars and machines into the estate some years back. The inauguration of the first sugar factory of the estate was the result of his enterprise, of which he is the managing director. It was followed by the establishment of one of the largest sugarcane farms in the province, which is worked by an expert under his supervision. The creation of all the public institutions mentioned under the Raja Bahadur must be considered to be the joint work of both the brothers.

PANCHAKOTE. Raja Sri Jyoti Prasad Singha Deo Bahadur of Panchakote Raj (Manbhum).

Born : 1881.

Succeeded to the Raj 1901.

Married : the sister of the late Maharaja Sriram Chandra Bhanja Deo Bahadur of Mayurbhanj.

The Estate of Panchakote, also known as Raj Chakla Panchakote or Pachete, is a very ancient and impartible zemindary extending over 2779 sq. miles and situated in the districts of Manbhum, Bankura, Burdwan and Ranchi.

The Raj is one of the oldest in Eastern India and was founded as far back as 81 A.D. by a lineal descendant of Bikramaditya, Maharaja Damodar Sekhar who came from Dhar in C. I. Raja Jyoti Prasad Singha Deo Bahadur the present Raja, is the 68th in descent from the founder. The family maintained its independence during the Mohammedan period sometimes paying a nominal Peshkush to the Murshidabad Treasury and was regarded by the Company as semi-independent even a few years before the time of Permanent Settlement. The present Estates of Jhalda, Begunkodar, Jaypur, Jaynagar, Jharia, Katras, Nowagarh, etc., were under the suzerainty of this family and had to perform military service whenever required. At the time of the permanent settlement these estates were assessed separately with the consent of the then Raja of Panchakote. The ancestors of the Raj had regular forts and forces under them and one of them, Maharaja Bir Narayan was placed in command of 300 horses by Emperor Shah Jehan. In rank and dignity this ancient house of Panchakote has all along been recognised as superior to the other zemindars of the district. The earliest residence fort of the former Maharajas was on the Pachete or Panchakote Hill, an offshoot from the Vindhyas, which still abounds in remains of old buildings, temples, and palaces. The present seat of the family is at Kashipur, Garh Raghu-nathgunge, in Manbhum.

The proprietors of the Estate were men of advanced views and were the earliest to realise the advantages of education. They encouraged men of letters to settle in the Raj. Over 200 villages were

given to learned people to settle in the Estate and spread education through the system of *Tols* and *Mukhtabs* with a view to raising the status of the tenants.

Raja Jyoti Prasad Singha Deo Bahadur has strictly maintained the traditions of his family and has proved himself to be a worthy successor of his predecessors by confirming the previous grants and making fresh provisions for various religious, charitable, educational and industrial institutions. He has also dedicated valuable properties yielding an income of about two lacs of rupees to his family and other deities consecrated by him. He is a veteran orthodox Hindu of the old school and strictly adheres to the vedic tenets and precepts in all matters, religious, social and political. He manages his Estate tactfully and efficiently and takes personal interest in its administration. The economic condition of the tenants has been considerably improved and his keen devotion to duty has won for him their love and affection. The family is well known for its traditional devotion and loyalty to the British Government.

Public donations made so far by the Raja Bahadur exceed Two Lacs of Rupees. He contributed

Rs. 7,500 in connection with the Silver Jubilee celebration funds of His Majesty the late King Emperor, and is recipient of the King's Silver Jubilee Medal. The Estate is rich in minerals. There are some very valuable coal mines in Perganas Shergarh in Burdwan, Chowrashi, Marrha, Mohal and Dumurkonda in Manbhum and Mahisara in

Ragoo Nath Jew Temple in the old Fort of the Raj on the Pachete Hill.

Bankura which are being developed by a number of leading English firms.

Heir-apparent : Sri Sri Kalyani Prasad Singh Deo.

Nearest Rly. Station : Adra, B. N. Ry.

Address : P. O. Panchakote Raj, (Manbhum).

PARLAKIMEDI: CAPTAIN MAHARAJA SRI SRI KRISHNA CHANDRA GAJAPATHI NARAYANA DEO, M.L.C., Maharaja of Parlakimedi, Ganjam District, in the Madras Presidency. The Maharaja Saheb is the owner of the Parlakimedi Estate with an area of 615 square miles; and of Gonduguranti and Boranta villages in Budarasingi Estate and the Malukdar Estate, Anandapuram, in Chicacole and the Delang Estate in Orissa.

Born: 26th April 1892.

Educated: At Maharaja's College, Parlakimedi and Newington College, Madras.

The Maharaja Saheb was a member of the Royal Commission on Agriculture; a delegate to the First Indian Round Table Conference; an associated member of the Orissa Boundary Committee and was selected in 1933 as a representative of the All-India Landholders' Association to give evidence before the Parliamentary Joint Select Committee in London. He is a member of the Madras Legislative Council and Honourable Adviser and Visitor to the Agricultural College, Coimbatore. He has been taking a prominent part in commercial and industrial advancement and owns a railway line of 57 miles. He maintains a big Rice Mill, a progressive carpentry School, a large Second grade College, a Sanskrit College, two large Girls' Schools for Oriyas and Telegus and an Agricultural Demonstration Farm.

He has to his credit a long list of magnificent public services. He contributed Rs. 1,00,000 to the Research Institute, Coonoor, and Rs. 20,000 for higher studies in Agriculture. During the Great War he subscribed Rs. 3,10,000 towards War Loans and Funds and recruited men both for Combatant and Non-Combatant Forces. He has held Honorary Commission in the land forces of R. I. M. since 1918. In recognition of his meritorious services and the interest taken in improving the condition of his Estate and its people he was awarded the title of Rajah (personal) in 1918, Rajah (hereditary) in 1922, Maharaja (personal) on 1-1-36, made Honorary 2nd-Lieutenant in 1918 and subsequently promoted to the rank of Captain. The Maharaja Saheb is keenly interested in big game hunting having bagged many panthers and tigers besides other wild animals and is also a keen Cricketer. He is a member of several important Clubs of this Presidency and of the East Indian Association, London.

PIRPUR : RAJA SYED MOHAMMED MEHDI, B.A., M.L.C., Taluqdar of Pirpur Dist. Fyzabad (Oudh) and Hon. Secretary of the British Indian Association of Oudh, Lucknow.

Born : December 27th 1896.

Educated : In Arabic and Persian; joined the Colvin Taluqdars' School, Lucknow, and subsequently the Canning College, Lucknow. Graduated in 1920.

Succeeded his father, the late Raja Sir Syed Abujafar, K.C.I.E., in February 1927.

Proprietor of Pirpur Estate in Fyzabad, Sultanpur, Jaunpore, Azamgarh and Ghazipur Districts. Pays a land revenue of more than Rs. 1,10,000.

Public Career : In November 1930 he was returned unopposed to the United Provinces Legislative Council of which he is still a member. The British Indian Association of the Taluqdars of Oudh twice elected him as their Hon. Secretary. In 1931 when the second Round Table Conference was in session he went to England on behalf of the Taluqdars of Oudh to press for the maintenance of their rights and privileges. In 1933 the British Indian Association deputed him to give evidence before the Joint Parliamentary Committee. He has organised a number of District Landholders' Associations. He was the President of the United Provinces Educational Conference held at Muzzaffarnagar in November 1934. He is a member of the U. P. Board of High School and Intermediate Education.

The Raja Sahib owns a rich library of old and valuable manuscripts. He has travelled widely in the continent of Europe and the Near East. Besides English, Persian, Arabic and Urdu he has a fair knowledge of French and German. In recognition of his services the British Government conferred on him the title of RAJA as a personal distinction in January 1932. He received the Silver Jubilee Medal in March last. His public donations amount to more than half a lac of rupees, the latest being his contribution of Rs. 5,000 towards the Silver Jubilee Fund. His estate is one of the best administered Taluqa Estates in Oudh.

RAM SARN DAS: Lala, Honourable Rai Bahadur, C.I.E., Kaiser-I-Hind Gold Medal, (1914); Chairman Council of State; Leader of Opposition in the Council.

Born: Lahore, November 1876; son of Rai Bahadur Lala Mela Ram.

The Family is a very ancient one and its members were in power for several generations before Maharaja Ranjitsingh's reign in the Punjab. His grandfather during the period of the Bhangi Kingdom was the General of the Army and also held the command of the famous Gun "Zamzama."

Educated: Government College, Lahore.

He is one of the leading Zemindars and Industrialists of the Punjab. He has subscribed over eight lakhs of rupees in charities and takes keen interest in public activities.

He is a Member of Lahore District Board; was Municipal Commissioner; Lahore, for over 15 years; Member, Punjab Legislative Council, (1912-1920); Government Delegate to Reserve Bank Committee to London; Chairman, Advisory Committee of the Central Bank of India, Ltd., (Punjab Branches); Chairman, Indian Institute of Bankers, (Punjab Branch); Director, British India Corporation, Ltd., Cawnpore; Member, U.P. Electric Works, Lahore. *Address:* 1, Egerton Road, Lahore.

RANKA RAJ: RAJA
BAHADUR GIRIVAR
PRASAD NARAYAN SINGH
OF RANKA RAJ, District
Palamau (Bihar and Orissa);
area 416 square miles.

Born: 1885. Succeeded his father late Raja Govind Prasad Singh in 1911.

Educated: At the Queen's College, Benares. The Raja Sahab is renowned for his devout character and charitable disposition. He takes keen interest in education—Sanskrit education in particular. He maintains a charitable dispensary and Govind Sanskrit Vidyalaya at Ranka and has recently constructed the Govind High English School at Garhwa, named after his illustrious father, and opened by Sir Hugh Stephenson, late Governor of Bihar and Orissa. Every important public institution in the district has benefited by his munificence, the chief among which are: The Prince of Wales Medical College, Patna; Lady Dufferin Hospital, Daltonganj; Science College Library, Patna; Leprosy Fund, Gaya; Silver Jubilee Fund; Girivar High School, Daltonganj. His public donations so far amount to nearly a lakh of rupees. During the Great War he recruited and helped the British Government with soldiers. He was a member of the Bihar Legislative Council from 1912 to 1923.

The Raja Bahadur belongs to the famous Gor clan of Ajmer Rajputs and ranks first among the leading Zemindars of Palamau. Throughout its history his family has been fervently loyal to the British Government and rendered remarkable services during the Indian Mutiny and on several other occasions. First rate assistance was rendered to the Government by the well-known Raja Shiva Prasad Singh, one of the ancestors of Ranka family, during the conquest of Palamau and for the maintenance of order there, for which the whole of Pargana Palamau was settled with him for some time. In recognition of the loyal services and public activities the title of Raja was conferred in 1922 and of Raja Bahadur in the year 1931. Raja Bahadur's eldest son and heir-apparent, YUVARAJ GIRINDRA NARAYAN SINGH, is being educated at the Govind High School.

It was at Ranka that H. E. Lord Minto, a former Viceroy of India, shot his first tiger in India in 1906, and since then it has been honoured by the visits of the Governors of Bihar and Orissa on several occasions.

SADIQ ALI KHAN :
NAWAB MIRZA
MOHOMED (SHISH MAHAL),
TALUQDAR OF KUNWA
KHERA, district Sitapur.

Born : In 1876.

Succeeded : January, 17, 1921, on the death of his father Nawab Mirza Mohomed Baqar Ali Khan.

Residence : Lucknow, Sadiq Manzil, Golanganj.

Heir : NAWABZADA

HAIDAR ALI KHAN, alias SIKANDER NAWAB.

Estate : Old name of the Taluqa : Kunwa Khera, present name Makanpur-Rahimabad with its Head Office at Arro, P. O. Selumau; Dt. Sitapur R. K. R. Station Jharekapur.

Education : Graduated in 1898 and called to the Bar on 1st May, 1901.

Title : "Nawab" recognised Hereditary.

The Nawab represents the eldest or the main branch of the "Shish Mahal" family. His great-grandfather Nawab Munawar-ud-Daula was Prime Minister to two Kings of Oudh, without taking any salary. Before him Nawab Munawar-ud-Daula's uncle Nawab Muntazim-ud-Daula was also Prime Minister to two successive Kings of Oudh. On mother's side, he descends from Nawab Burhan-ul-Mulk, the first Nawab of Oudh. One of his ancestresses descended from Shah Abbas Safwi, Shah of Persia.

The Nawab has a seat in "Durbars" amongst the ex-royal family.

SHAMRAJ RAJWANT
BAHADUR, RAJA, Member
of H. E. H. The Nizam's
Executive Council, in charge
of the Public Works Department,
belongs to one of the
most illustrious and historical
Hindu Noble families of
Hyderabad (Deccan).

Family History: Some of his ancestors served the Nizams as Ministers, and one of them, who bore the same name as the present Minister for P.W.D. was once the Chief Minister to the Nizam. The story of how Raja Rai Rayan family rose to eminent position first at the court of the Moghul Emperors and then at the court of the Nizams of Hyderabad forms one of the most romantic episodes in the history of those times. The family supplied a line of treasurers and ministers of the exchequers to the Emperor Shah Jehan. Nizam-ul-Mulk, the founder of the present Asaf Jahi dynasty was a great friend and patron of the family at the Moghul Court, and it was through this friendship that a branch of the family came to the Deccan and settled in Hyderabad.

Born: 15th of August 1898.

Educated: At Nizam College.

Raja Shamraj Rajwant is a lover of Art and Literature and his museum contains a valuable collection of Old Indian Paintings. He has lavished much care and money in installing a first rate Library in his palace, which he has generously opened to the reading public.

Area: 400 square miles.

No. of Villages: 122.

Population: 66,000.

Revenue: Rs. 3,75,000.

Appointed Member of the P.W.D. on 1st June 1935.

Address: Shah Ali Bunda, Hyderabad (Deccan).

SIDDIKY: MOULVI CHOWDHURY KAZEMUDDIN AHMED, KHAN BAHADUR, of Baliadi, Dacca.

Born 1876. The Baliadi family is one of the most ancient and notable aristocratic families in East Bengal with which were closely associated some of the important events of the History of Bengal. Even at an early age Khan Bahadur Moulvi Chowdhury K. A. Siddiky earned a place for himself among the notabilities of his province.

His estate lies in the districts of Dacca and Mymensingh, the area being 200 square miles. He looks after his tenants with the greatest possible solicitude even at the sacrifice of his personal comfort and leisure.

He has identified himself with the welfare and happiness of his subjects. He is ever watchful about their hardships and misery. In times of extreme difficulty and dearth of crops, the Khan Bahadur Saheb makes generous remissions of rent to his tenants. Where they suffer from scarcity of water for drinking and agricultural purposes, he has sunk new wells, and tanks and reclaimed old ones.

Khan Bahadur Moulvi Chowdhury K. A. Siddiky is a man of great literary taste, well versed in Oriental languages, a good poet in Bengali, Urdu and Persian. A public spirited and generous minded zemindar as he is, the Khan Bahadur is always ready to do his best for the public. For the convenience of communication he has on various occasions made free gifts of land for construction of roads. He has also contributed much for the establishment of dispensaries in his Estate.

Loyalty to the British Crown is a tradition of the family of the Khan Bahadur. On all occasions he and his family have joined hands with the Government.

He has played a very prominent part in the public life of Bengal. He was the first President of the Eastern Bengal and Assam Provincial Branch of the All-India Muslim League at Dacca and in this capacity he rendered very valuable service to the community. He was Municipal Commissioner, a member of the District Board, Dacca University Court, Kazi Advisory Committee and various other Institutions.

His late Majesty's Silver Jubilee was celebrated in Baliadi with great pomp and eclat. He is a recipient of the King's Jubilee Medal.

His noble patronage for the cause of Education and Learning, unstinted charity and disinterested solicitations for the welfare of his tenantry, traditional and unshaken loyalty to the Crown, suavity of manners, unostentatious mode of life, exemplary pious habits and ideal character have won for him the love and respect of his countrymen.

Address: Baliadi, Dacca.

SINGHA CHANDA AND
RAMNAGAR RAJ: BHAIIYA
JAGDISH DATT RAM
PANDEY of Singha Chanda &
Ramnagar Raj: Taluqdar and
special Magistrate, Gonda
(Oudh) U. P. He is the scion of
a very noble family distinguished
for their piety, Military service
and administrative genius. His
ancestor, Raja Birbal, was well-
renowned as Prime Minister and
one of the nine gems of Moghal
Emperor Akbar, The Great.

Born in 1907.

Succeeded in 1921 on the
demise of his father Bhaiya
Ambika Datt Ram Pandey, a
Taluqdar of great repute, who
helped the British Government
in the Great War by supplying
many recruits to the Indian Army and Purchasing War Bonds,
in recognition of which he was given Sanads and a Gold Watch by
His Excellency the then Commander-in-chief. The Estate was then
taken over by the Court of Wards and was released in 1928. It is
one of the premier Estates in Oudh.

*Educated in Colvin Taluqdars' College, Lucknow. He took the
degree of B. Com. in 1926.*

Bhaiya Jagdish Datt Ram Pandey is a member of the Executive
Committee of British Indian Association, District Court of Wards
Committee, District Soldiers' Board, Aman Sabha Library, District
Board and Indian Red Cross Society and he takes notable interest
in activities designed for the good of the public.

He is also President of the Boy Scout Association and Local
Kavi Sammelan Society and is prominently associated with many
other Public Institutions.

He was a member of His Late Majesty's Silver Jubilee Provincial
Committee and greatly contributed to its fund. He made a liberal
remission of rent to his tenants in commemoration of the Jubilee,
in recognition of which he has been awarded His Majesty's Sanad and
the Silver Jubilee Medal.

His public charities have been numerous and liberal.
His public spirit is on par with his loyalty to the Crown. Any move-
ment aiming at public good can count upon his active support and
encouragement.

Heir apparent: Bhaiya Bhupendra Datt Ram Pandey. He
is a bright and promising boy of 12 summers and is receiving education
in Colvin Taluqdars' College, Lucknow.

TAMKOHI RAJ : Raja Indrajit Pratap Bahadur Sahi, the present Raja Saheb of Tamkohi. Tamkohi Raj in the Gorakhpur District (U.P.) dates its prominence long before the Mohammedan Rule in India though recognition of titles and Mansabs were obtained during the reigns of the Emperors of Delhi by Raja Kalyan Mal and Raja Hamir Sahi, and from the British Government in the time of Raja Kharag Bahadur Sahi.

The present Raja Saheb at the age of 5 years succeeded his father, Raja Shatrugit Pratap Bahadur Sahi after his death in the year 1898. Since then many improvements have been made to the Estate in almost all directions—Political, Industrial, Social and Educational. The Raja Saheb has been a member of the Legislative Council since the time of the Reforms of 1920 though at present has discontinued his connection temporarily owing to some important Estate affairs requiring his personal attendance. He is still on the roll of many Government and Public Institutions and has contributed a lot to the well-being of his ryots and for the progress of the Estate during the short period he has had charge of the Raj. He is popular among all sections of the Public of Gorakhpur acting at present as the Chairman of the District Board. He is a good shot and is fond of manly games.

The Raja Saheb is closely related to His Highness the Maharaja of Benares in U. P. and of Bettiah and Tekari in the Bihar Province.

The Estate is comprised of 462 villages in the districts of Gorakhpur and Basti in U.P. and Chhapra, Gaya, Muzafferpur and Darbhanga in Bihar Province.

UMMAIDNAGAR ESTATE:
RAO BAHADUR THAKUR
JAI SINGHJI SAHIB of
 Ummaidnagar, Marwar,
 Rajputana.

Born: 16th January 1868.
 Succeeded to the Gadi on the death of his father, Thakur Bhabhut Singhji. He is the 8th successor to this Thikana.

Educated: Privately.

Married: The daughter of Thakur Sahib of Sambhariya, Marwar, in 1891.

The Thakur Sahib takes very great interest in the administration of his Jagir which is conducted efficiently and on modern lines. He has introduced several reforms and carried out works of public utility such as construction of a school, boring of new wells for agricultural purposes, etc. His keen devotion to duty and interest in the welfare of his tenants has won for him their love and affection. He began serving Jodhpur State when he was only 13 years of age and held different positions. For some time he was Assistant Guardian to the late Maharaja Sardar Singhji. He later joined the Sardar Rissala and retired as Captain of a unit. Only recently he relinquished his duties as guardian to the Bada Maharajkumar Sahib of Jodhpur. The title of Rao Bahadur was conferred on him in 1934. He enjoys first class State Izzat, *viz.*, Hath-Ka-Kurab, Double Tazim and Gold.

The Thakurs of Ummaidnagar are Bhati Rajputs and descendants of the ruling house of Jaisalmer. One of the ancestors, Maharajkumar Shri Bijay Singhji fought for the Jodhpur State and in recognition of his gallant military services the then Maharaja Saheb granted him an Izzat and also the district of Phalodi for his faithful devotion to the gadi. Phalodi was later retroceded to Marwar in exchange for the present Jagir Ossian. This house played a further notable part through Devi Singhji, grandfather of the present Thakur Saheb Jai Singhji, for he arranged a treaty of freindship between Jaipur and Jodhpur which States had been at war for a long time. Thakur Bhabhut Singhji, father of Thakur Jai Singhji was guardian to the late ruler of Jodhpur. The Thakur Saheb has four sons and two daughters. One of his daughters is married to the Maharaja Saheb of Jodhpur.

Heir apparent: Lieut. Kunwar Bhom Singhji. He is attached to Jodhpur State forces and is at present guardian to the 3rd Maharajkumar of Jodhpur.

Other Sons: Capt. Kunwar Kalyan Singhji, A.D.C. to H. H. The Maharaja Saheb of Jodhpur. Kunwars Mohan Singhji and Chottu Singhji. *Jagir:* Shri Ummaidnagar consisting of three villages, Shri Ummaidnagar, Cheharai and Mathania.

Address: Raikabagh Palace, Jodhpur or Ummaidnagar (Marwar).

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 353. The Calendar dates from the Creation, which is fixed as 5,760 years and 3 months before the beginning of the Christian Era; the year is Luni-solar.

The *Mohammedan*, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15, 622 A.D. The months are Lunar.

The *Farsi* year was derived from a combination of the Hejira and Samvat years by the order of Akbar; it is Luni-solar. The *Bengali* year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The *Samvat* era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudi*, or bright, and *badi*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

BOMBAY

By SAMUEL T. SHEPPARD.

ACCORDING to the preface, this book is "only a nibble at a few chapters" of the history of the City of Bombay, "made for the benefit of the many people who want to know something about Bombay but who cannot find any book to satisfy their desire."

He deals with the early history of the Island; why it was ceded by the Portuguese and how the East India Company got it; with reclamation from the early British days to modern times (a chapter which contains much from the India Office records that has never been published before); and with defence, industries and trade, the growth of the town, population, religion and learning, and social diversions.

* * *

"Perhaps wisely the volume before us says little or nothing about politics. But it does convey a sense of the tremendous energy and enterprise that has gone to the gradual building up of the life of the great communities of India."—*The Statesman*.

The book contains 24 full page illustrations.

Price Rs. 5, in Full Cloth
